THE NEW AGE OF WOOD

By Charles V. Stanton

A SERIES of twelve articles entitled "The New Age of Wood" is appearing in the International Woodworker labor newspaper, published at Portland, Oregon, the official publication of the International Woodworkers of America (CIO).

These articles are interesting in more ways than one. They are interesting first, of course, for the text, which is written by Ellery Foster, who has the faculty of making a more or less statistical subject colorful.

The International Woodworker also is printing articles of a similar character entitled "Science Finds New Ways to Make Trees Do More Work," reporting on new wood waste developments as presented by the American Forest Products Industries, Inc., and the Forest Products Laboratory, a division of the U. S. Forest Service, at Madison, Wis.

A GREAT deal has been printed in recent months about use of wood waste and the importance of making prompt use of new processes whereby a greater portion of a tree may be converted into manufactured materials, rather than utilizing a small portion for lumber and destroying the remainder.

We believe that if the woodworkers—the men who labor in the woods and the mills—become more thoroughly familiar with this problem, an increased measure of conservation in all operations will result.

In this connection the following paragraph from Ellery Foster's "The New Age of Wood" in the International Woodworker is significant:

More than any other raw material, wood holds the key to the world's problems of freedom from want. Not because wood will displace other raw materials, but because it provides huge additional sources of supply to help the world feed, clothe, house, warm, and transport its teeming millions of people.

MANUFACTURERS of airplanes have found that they can greatly increase production by maintaining records of what their airplanes are doing on the war fronts. When a plane from a war plant performs an outstanding mission, and the news is broadcast to workers, production immediately takes an upswing.

We believe the same principle applies to the educational work being undertaken by the International Woodworker for when laborers fully understand how vital their work becomes to general welfare they will have a greater production stimulant than could be provided by any other means.

Labor's part in this "New Age of Wood" is particularly emphasized by author Foster as follows:

Labor, with its interest in full employment at good wages, hours, and working conditions, has a huge stake in seeing that this new age of wood comes into being here in the United States. It will be needed as a part of the new developments which we must have after the war if we are to avoid unemployment.

Powerful monopoly interests, particularly the molasses and petroleum interests (who formerly made most of the industrial alcohol) can be expected to fight the expansion of the wood sugar industry. They might succeed, because industrial alcohol is one of the hottest behind-the-scenes political issues in the world.

Persons who have been working on wood waste utilization problems know that Author Foster is not speaking idly when he tells of the powerful influences attempting to block the program. Harris Ellsworth, former News-Review editor, now Oregon's congressman from the Fourth District, could be an effective witness if called upon to tell of the pressure brought against his effort to establish the alcohol-from-wood-waste plant now being built at Springfield.

But widespread dissemination of information such as is being undertaken by the International Woodworker will be the most powerful and effective weapon to overcome monopoly control and open the way for effective and complete use of our forest resources.

getter.

ON the eastern front, the Russians are fighting all the way from Czechoslovakia to the Baltic. They are keeping their flanks even with their center—talking no chances. The hardest fighting is at the northern and southern ends, Zhukov, in the center, is still quiet, but apparently has bridgeheads over the Oder and is ready to strike when the time comes.

The Germans are fighting hard—their forces being composed of a combination of army regulars and Himmler home guards. In spite of our bombing of their rear communication lines, they are getting reinforcements up to the front.

The dispatches describe their counter attacks as counter JAES, not in full offensive force.

MOSCOW reports officially that 238,150 Germans and Hungarians have been killed or captured in the last WEEK. There's a lot of Germans left, but that

Butler Home Near Reedsport Suffers Damage From Fire

REEDSPORT—Fire damage amounting to approximately \$2,500 resulted Monday when the residence occupied by Mr. and Mrs. Earl Butler at the Decker Point dairy, located eight miles east of Reedsport, was destroyed.

The blaze started about 11 a. m., apparently from an overheated stove or defective flue in the Butler residence. As Mr. and Mrs. Butler were away from home, engaged in employment at the dairy, they lost nearly all of their household furniture, clothing and personal effects, including a purse containing a considerable amount of currency.

The Reedsport fire department, although handicapped by low tide, laid hose from a nearby slough and pumped water to the blaze, while spectators formed a bucket brigade. Fire was started several times by sparks falling on the cow barn, which contained a large amount of hay, but the fire fighters succeeded in beating out the roof fires despite a strong wind which was carrying sparks from the burning residence to the buildings of the dairy plant.

A large amount of ammunition was stored in the residence and exploding cartridges forced fire fighters to take cover. Roy Chenoweth, an employee of the dairy, was struck on the hand by a bullet, but was not seriously hurt.

The Foster dairy is one of the two large milk producing plants serving the Reedsport area.

LETTERS to the Editor

SHEEP LOSERS APPEAL FOR AID AGAINST KILLER DOGS

Editor, News-Review: We are taking this means of appealing to the public to consider others when they allow their dogs to run loose. Last night in our little flock of sheep, three mother sheep and one lamb were killed and another little lamb badly torn.

If we could put the responsibility not only on the dog owners but also on the neighbors, who know the dogs are running at large, it might help some.

Flume into this same Alpine mountain hangout. There may be something to this nazis-last-stand story that has been going the rounds.

Yoncalla Soldier Guides Fliers In Perilous Weather

A NINTH AIR FORCE THUNDERBOLT FIGHTER-BOMBER BASE, Belgium—The voice of Tech. Sgt. Earl L. Shiry, Yoncalla, Ore., is like the candle in the window, the doorway under the mat, for pilots "bucking" the weather on the way back from combat over Germany.

Shiry is a homing station operator for Lieut. Col. Leo C. Noon's P-47 thunderbolt group, a unit of the Ninth air force. But Britain-based aircraft also benefit from his homing directions.

He helped steer 348 transient aircraft through bad weather in one 30-day period, when the station transmitted 1,490 compass steers. Shiry, who entered service at Roseburg, Ore., has been recommended for the bronze star medal for the feat of homing 65 aircraft in two hours, radiating them from one to a dozen steep angles. They were fighters and bombers, leaving their targets through solid overcast individually, in elements and in flights.

Traffic was so heavy two and three aircraft would be calling for help at once, and it took 25 minutes to get around to giving one pilot a second steer after an original compass heading had been transmitted to him. In spite of all difficulties, including two emergency landings, all aircraft were guided to safe landings.

As chief of section, Shiry has helped hundreds of pilots find their way through haze, fog, overcast, many of them with severe battle damage, or separated from formations in the heat of combat.

Usually only a single transmission is necessary. Once, however, the station gave 14 separate steers to a Britain-based fighter plane, guiding the pilot to safety from east of the Ruhr. Shiry has guided airplanes of almost every type flying in this theater.

The exactions are suggested in a sign hanging on the wall of the homing van, jam-packed with equipment: "No (German aircraft) homed here!"

Trichinosis-Stricken Youths Are Recovering

PORTLAND, Feb. 21.—(AP)—Two Mt. Angel boys who were near death for ten days after being stricken with trichinosis were pronounced out of danger today. Elmer Huber, 13, and his brother, 8, ate uncooked, home-cured country pork sausage, as did some of the other ten members of the Alfred Huber farm family. Trichinosis is caused by tiny larvae encysted in pork and released by the digestive process.
