Mrs. Edwards was released from Mercy hospital Saturday and since that time has been convalescing at the home of Mr. and Mrs. James Vowell in Riverside. The Edwards formerly made their home in Roseburg and operated a fruit and vegetable stand just north of Roseburg on highway 99.

Defends Nebraska Utility Deal From "Swindle" Charge

WASHINGTON, July 10—(AP)—Rep. Buffett (R., Neb.) yesterday endorsed plans for a house subcommittee's investigation of holding company activities, but defended the record of Nebraska firms criticized by Chairman Boren (D., Okla.). Buffett declared that remarks made by Boren "assailed the integrity of many outstanding citizens of my district and state... and reflected unfairly and unfavorably upon them." Boren told the house last week that Wall street promoters had "found loopholes in the holding company act which is allowing them to make millions by forming trick non-profit corporations." Boren asserted that activities of the Omaha Electric Committee, Inc., sets the pattern for Swindle, Inc.

Buffett, in a speech to the house, replied: "I hope the committee will generally endeavor to stop transacting in the utility industry. The record of this administration in this respect has been mostly bark and little bite. I have for many years deplored the financial immorality of many top figures in the utility business, believing them a greater threat to our free enterprise system than any collectible assortment of communists to be found in America."

"However, the integrity and progressive character of the leading citizens of Nebraska, who have worked to bring Nebraska power into true public ownership, have long commanded my admiration and respect."

Gilbertson Ave.; to the Standard Oil Co. on Gilbertson to meet Molly; on Clair St. to the Arch and out to the city limits. This work will cost approximately \$10,000. Glendale has been planning on doing this for several years but could not get the equipment until now.

Glendale

GLLENDALE—Mr. and Mrs. J. R. Cox left Sunday for southern Calif., to visit their daughter and family.

Mr. L. L. Vandine entered Josephine General hospital, at Grants Pass last week where he underwent a major operation.

The city of Glendale is having new pavement on the streets. The pavement runs from the Post Office up Third St., up Molly St. to

Farm Loan Plans For New Fiscal Year Announced

Farm Security administration plans for the new fiscal year were announced this week by Victor B. Kuhlman, county FSA Supervisor. Loans up to \$2500 for livestock, machinery, group services, building repair, cash rent, feed, seed, water facilities, and other operating goods can be made providing the applicant falls within the following classifications: returning World War II veterans who wish FSA aid in re-establishing themselves on a farm, farmers who are already farming. To be eligible, the applicants must be resident operators or have a background of farming on their own or farm experience, have secure tenure on a good family size farm through rent, lease purchase contract, or ownership, and are unable to secure adequate credit from local banks, Production Credit association, or other similar agencies.

The county committee, which reviews and passes on all applications will give special consideration to each veteran's application, but under present FSA authorities cannot give preference.

Loans are accompanied by management assistance where needed, bear 5 per cent interest, and are repayable from two to five years.

Payments on Variable Basis. Funds have been appropriated for the purchase of family type farms with special appropriation of \$25,000,000 for veterans. Family farm units which fall within price limitations and at the same time will pay for themselves from farm income will be considered under this program. All tenant farmers and returned veterans with farm backgrounds are eligible to apply. Those with livestock and equipment to operate a farm, and those with families, will be given preference. Farm ownership loans are repayable over a period up to forty years and bear 3 per cent interest. Payments are set up on a variable basis, calling for more in good price years and less in poor years. Farms may be paid out in full any time after the first five years. Emphasis is placed on a good family type unit where there is an opportunity for successful farm ownership and family type living.

An appropriation of \$67,500,000 for standard rehabilitation loans is the same as last year. However, the appropriation for tenant purchase loans has been increased to \$25,000,000. The water facilities appropriation is \$1,000,000 for this year.

Eligible farmers and veterans

who are interested may contact the county FSA office located in Roseburg in the Medical Arts building, Room 201, on every third Wednesday of each month.

Elks Softballers Date 2nd Game With Eugeneans

The Elks club softball team, which defeated the Eugene Junior chamber of commerce team in a game on Finlay field last Sunday, is preparing to go to Eugene Monday afternoon for a return match. A large number of fans are expected to accompany the players.

Rotate Garden Crops to Check Disease Spread

Crop rotation has paid dividends for hundreds of years among commercial growers. There is no reason why it should not be followed in the small-scale Victory Garden.

The same crop is never planted in the same soil for two seasons in succession. The idea is to grow first a leaf vegetable, then a root crop and so on.

If you have never practiced crop rotation before, this summer is the time to start. Many of the

seeds planted early this spring have by now developed into husky plants ready for the harvest. Probably some have already been pulled up, leaving vacant space.

Start Second Crops Now

This is the time to start second crops. As a general rule, plants that develop shallow rooting systems should follow deep rooting specimens. It is probable that disease and insects may be controlled to a large measure by following a rigorous method of crop rotation. Certain insects, for example, live on only one type of host plant. When that variety is harvested the insects may die for lack of a proper host to support them. Should the same crop be planted again on the identical area the insects may again take

up their job of living off the host plant.

Different crops are known to take different elements out of the soil. Beans and peas, for example, fix a great deal of nitrogen out of the ground. To plant these crops consistently on the same plot would seriously deplete the soil of nitrogen. Root crops absorb larger quantities of potassium and phosphorus, than of nitrogen.

Soil Stirring Advised

If the soil was properly prepared in advance of spring sowing a long period of rest should not be required for fallow crops. It would be wise to stir the soil to some extent, raking the surface clear of all rubbish and debris. Clods may be removed, providing an improved texture for the new seed bed.

who are interested may contact the county FSA office located in Roseburg in the Medical Arts building, Room 201, on every third Wednesday of each month.

Your neighbor's Riversides didn't come on his car; he chose them himself, to replace the tires he found on his car as "original equipment"! He chose them deliberately, in preference to the tires on new cars and all other famous tires. (Ever ask him why?)

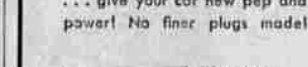

More MILES-OF-SAFETY ON RIVERSIDES

Riversides are now actually stronger than Wards pre-war tires! Here's why—Each individual cord is stronger to begin with; then chemically-strengthened to stay strong, next liquid-dipped to "weld" the cords together, then cushioned in rubber! Finally, the plies are cemented together before vulcanizing to provide greater protection against separation, bruises and blow-outs!
