Advice Given On Proper Treatment Of Woolen Goods

A wool dress that comes back from the cleaners a size too small is a tragedy in a woman's life. To avoid it, wool goods of any kind should be properly shrunk before it is made up, says Wanda Thoreson, Home Demonstration Agent.

Some woolen materials are already shrunk and have the words "Ready for Sewing" on the sel-

lage. This is a point which should be carefully checked when buying woolen yardage. If the material has not been shrunk, it may be taken to a tailor or dry cleaning establishment for shrinking or may be done at home.

Many conflicting directions have been given for shrinking wool at home. Miss Thoreson reports that recent tests have shown that pressing the entire piece of wool with a steam iron is a simple and satisfactory method, if care is taken to hold and press with the weave and not to stretch or pull in the process.

Without a steam iron, it is necessary first to dampen the wool thoroughly and then press it with a moderately warm iron under a press cloth. Rolling the wool in a damp sheet is a simple way to dampen it. Dip a sheet in water, wring it out, then spread it flat on a table and lay the wool material, flat and straight, on the sheet. Roll sheet and wool together firmly but not tightly. Allow to stand overnight. Then press wool on the wrong side under a dry press cloth with no pulling or stretching.

If the fabric is extra wide, it may be easier to leave it doubled, as it comes in the bolt, during dampening. If so, the roll should stand a few hours, then be re-

versed and re-rolled so that the entire piece will shrink evenly before pressing.

A common cause of clouded corners is inherited syphilis. Blood vessels infiltrate the corners, causing it to become opaque and pink. This condition popularly is called the "salmon patch."
