The Weather

U. S. Weather Bureau Office Roseburg, Oregon. Forecast for Roseburg and vicinity: Partly cloudy tonight and Sunday.

In the Day's News

(Continued from page 1)

They are sinking into the mire of socialism, kidding themselves about a more equal distribution of what they produce—forgetting that WHAT ISNT PRODUCED CANT BE DISTRIBUTED.

MEANWHILE they dazzle themselves with a royal engagement with its glittering sequel of a royal wedding. Such things are OK for a people that is sitting pretty on top of the heap. They are POISON for a people that isn't producing enough to meet its own needs.

WE are better off than the British. We have a balanced economy. We have enough raw materials to make the things we need, with a surplus left over to swap for any raw materials we happen to be short on.

ALL we need to do in order to pull ourselves out of the temporary hole we find ourselves in is to work and produce as we never worked and produced before.

THE upshot of it all is that as fast as prices go up wages go up, and as fast as wages go up prices go up. We're like a squirrel chasing itself around in its silly little exercise wheel.

ABOVE everything else, we need to get back to hard-headed economics. We need to realize that ONLY THINGS COUNT, that money is only the grease that lets the wheels turn.

THAT was a long time ago. Maybe they could do it if it were as Methuselah was able to put off dying. But that day is past. The only way to get things now is to WORK AT IT.

APPLIED UTILIZATION

By CHARLES V. STANTON

Major companies connected with the timber industry are giving most serious consideration to problems of wood waste utilization. The tremendous volume of wood wasted in present production practices is a cause of serious concern.

The Weyerhaeuser Timber Company working for "full utilization," recently announced methods for conversion of even the bark of fir trees into several products promising widespread usage.

Study of wood waste utilization has resulted in discovery of how to make, from what has previously been considered poor material, items excelling in quality anything known to date.

Flywood furnishes a good example. Nothing but the very finest grade of wood now is used. Plywood of the future, however, will have a filler of second or third grade wood, or, perhaps, compressed pulp, with a hard-finish surface of plastic, manufactured from wood fibre.

The Harbor Plywood Company has announced acquisition of patents on two products, a new type of flooring and an acoustical wallboard, to be manufactured at its new plant at Riddle.

One of these products promises to meet a long-felt need. It will be in the form of an end-grain flooring which, although only three-fourths of an inch in thickness, will withstand the heaviest traffic.

Three-quarter inch square blocks, with grain on end, will be cut and compressed automatically, then laid on a flexible, mastic base. Sheets of this material may then be cemented to concrete floors, providing all advantages of a wooden floor with a resistance to the most crushing or heaviest traffic.

Toughness of Douglas fir as a floor covering when end grain is exposed is well known. Heretofore, the deterrent to use of wooden floors was found in swelling and contracting because of humidity changes. Armin Elmendorf, in whose Chicago laboratories the new product was developed, reports that the process bought by Harbor Plywood has been exhaustively tested under all possible combinations of humidity, temperature and exposure.

This product doubtless will have untold uses. Particularly designed for factories, it also is ideal, it is claimed, for auditoriums, gymnasiums, business houses, post offices, etc., or any place where heavy traffic exists or people are required to stand for long periods at their work, as a wooden surface causes less fatigue than concrete or linoleum covered floors.

Despite the many obvious and practical applications of this new type flooring, it can be made entirely from materials now being burned by the thousands of tons at nearly every operating mill. Knotty boards, stems, large limbs, etc., can be utilized—material heretofore rejected in all milling processes.

The Riddle plant of the Harbor Plywood Corporation also is expected in the near future to be producing a new type of acoustical wall board. In addition to its sound-absorbing qualities, this particular type of board will be fireproof. It can be surfaced with various types of finish, or can be used as a plaster base. Yet it will be made from wood fibre, utilizing waste material entirely.

Utilization of wood waste involves several factors. One is the invention of machinery by which production may be kept at low cost. Special equipment has been designed in connection with the two products to be manufactured at Riddle providing completely automatic production. Another factor is that of making an article better than competing items of comparable cost. Other considerations include availability of materials, transportation from woods to point of manufacture and transportation from factory to market.

As inventive science is concentrating on wood waste utilization these various problems are being solved. Within a few years, we believe, very little of our timber will go into boards as it does today. Instead, it will go into products of greater utility, furnishing more man hours of employment at skilled and semi-skilled rather than common labor rates, while yielding proportionately higher profits.

Deadline on GI Insurance Cited

As the August 1 deadline nears for revival by veterans of their lapsed GI insurance without a physical examination, new thousands of Oregon reinstatement are pouring into the northwest insurance center at Seattle, the Veterans Administration reports.

Under the present VA regulations veterans have until August 1 to reinstate their GI insurance simply and easily. All that is required, the VA explains, are the payment of two monthly premiums and the signing of a statement by the veteran that his health is as good now as it was

when his policy lapsed. Further details may be obtained at the coordinator's office at the Roseburg Veterans Hospital.

Hotel Rates Boosted for Seattle 'Permanents'

SEATTLE, July 12.—Hotel room rates for permanent residents will be hiked \$10 to \$17.50 a month in most Seattle hotels effective August 1, it was announced by Charles W. Hunlock, president of the Seattle Hotel Association.

The August 1 date, he said, was set in order that residents could make other arrangements if the new rentals were too high. A standard monthly rate under hotel rent controls—abolished June 30—was \$35.

Don't Drive Sans Proper License, Sheriff Warns

Sheriff O. T. Carter warns Douglas County motorists against driving without a proper driver's license.

"The 1947 legislature passed a new law making it more convenient for everyone to keep his driver's license up to date," the sheriff said. "With the traffic problem what it is, we can't exclude those who fail to carry valid cards."

For the next two years, permits will be renewed by serial number, and not the expiration date printed on the face of the card. Present Oregon driver's licenses all carry a serial number prefixed by the symbol "5R".

This has no effect on automobile license plates. Secretary of State Farrell, whose driver's license division is in charge of the program, has announced that the new cards replacing the "5R" series will have the correct expiration date typed or written on the face.

Present printed dates should be completely disregarded, though, Farrell said. "Until you replace your '5R' driver's license, carry a renewal schedule with you."

License cards 5R 1 to 5R 33,000 may now be renewed at the Roseburg City Hall between the hours of 8 A.M. and 5 P.M. on Monday through Friday. In most cases no examination will be necessary.

LOCAL NEWS

Recovering—Mrs. Lewis E. Jones is recuperating at her home after an operation at Mercy hospital.

Will Take Vacation—Mr. and Mrs. E. A. Pearson and son, Donald, and daughter, Mary Lynn, of Roseburg, are leaving Sunday for Neskovin to enjoy a three weeks vacation.

Return to Coos Bay—Mrs. E. C. Laird and daughter, Sonda Sanders, have returned to their home at Coos Bay, following a visit with Mrs. Grace Smith and children in Roseburg.

Leave for Montana—Mrs. Merie Sandon and daughter, Arta, left yesterday for their home in Polson, Mont., following a visit in Roseburg at the home of Mr. and Mrs. Howard Hutto.

Leave for Portland—Mr. and Mrs. Clyde Ward of Roseburg left today for Portland to attend the Elks convention and to visit their son-in-law and daughter, Mr. and Mrs. Walter Cail.

Return Home—Mr. and Mrs. Robert Pattison and son, Robbie, have returned to their home at Springfield, following a visit in Roseburg with Mr. Pattison's parents, Mr. and Mrs. W. H. Pattison.

Back From Coast—Mr. and Mrs. C. R. Bartlett and sons, Richard and Dean, and Miss Helen Solnicka, have returned to Roseburg, following a visit at Port Orford with the Bartletts' son and daughter-in-law, Mr. and Mrs. Arthur Bartlett.

Returning From Neskovin—Mr. and Mrs. Marshall Pengra and sons, Marshall and Michael, and Mr. and Mrs. Fred Lockwood are returning to their homes in Roseburg this weekend, following two weeks vacationing at Neskovin.

Public Invited to Social—Melrose Grange has invited the public to attend an ice-cream and cake social Sunday, July 13, at Busenbark Grove. The serving will begin at 5:30 P.M., and continue throughout the evening hours.

Annual Picnic Dated—The Elgarose Comfort Club will hold its annual picnic dinner Sunday at the Forks of the river for members and their families and friends. If the weather is inclement the picnic will be held at the Elgarose schoolhouse.

Visit at Patterson Home—Mr. and Mrs. Thomas Findlay and daughter, Brenda, who reside on the Keasay road, spent yesterday on South Deer Creek visiting their son, Tommy, who is working during the summer on the L. L. Patterson ranch.

Visitors Leave—Mr. and Mrs. Kirk Tigard and son, David, of Albany and Mr. and Mrs. Harry Keasay and son, Larry, of Klammath Falls have returned to their homes, following a visit with Mrs. Tigard's and Mrs. Keasay's parents, Mr. and Mrs. Dow Keasay, and with their brother and sister-in-law, Mr. and Mrs. Dow Keasay, Jr. Guests now visiting at the Keasay St. home are Mrs. C. S. McNutt, mother of Mrs. Keasay, and son, G. E. McNutt, both of Cottage Grove.

DAILY DEVOTIONAL DR. CHARLES A. EDWARDS

"Their faces did shine as the sun." The faces of the medieval saints shone so brightly that, according to legend, people could see the gleam from afar. That may be too much for us to believe. But we do know that a man's character and thoughts are reflected in his countenance. I well remember at Pao-Ting-Fu, China, during the Boxer movement, scores of native Christians were beheaded because they said, "See how their eyes shine." My dear friend, Horace Pitkin, was among the martyred group. Most of us under trial present a dismal visage. But the transfigured countenance of Jesus was immediately after He told His disciples that He "must go unto Jerusalem and suffer many things." He knew of the ordeal ahead, but it did not cloud His countenance. We, His followers, can face life with the same illumined countenance when we learn the secret of His serenity and we may discover it if we will. It was said of Dante that after he had dreamed of God and heaven, his face shone so brightly that they said "Behold the man who has been in paradise." When Stephen was being stoned to death the "Countdown" of his life as it had been the face of an angel, for his face did shine as the sun. —Amen.

Better Type Of Loganberry Seen From Discovery

CORVALLIS, Ore., (AP)—The mystery of how Judge J. H. Logan produced the loganberry, which has plagued horticulturists for 60 years, has been solved. Logan said he crossed the California wild trailing blackberry with a raspberry, in developing the Loganberry at Santa Cruz, Calif., in 1880. No one since could do it, however, until George F. Waldo's experiments at Oregon State College were confirmed this month by Dr. George M. Darrow, head of the U. S. Department of Agriculture's deciduous fruit breeding work.

Darrow said that Waldo, federal small fruits specialist stationed at the college, acted on a tip from English experiments and crossed the wild blackberry with a French variety of raspberry. The problem, he said, was to find berries with the same number of chromosomes (inheritance units). Blackberries commonly have twice as many as raspberries. Darrow said that Logan either used the French variety or stumbled on a common variety with double the usual number of chromosomes. Introduced Loganberry varieties are likely to result from the discovery, he said. Waldo's experiments also revealed this year that Judge Logan in producing the mammoth variety of blackberry from unrecorded parentage, crossed the upright eastern blackberry with the California wild trailing blackberry. State college men said this find was of prime commercial importance, promising to lead to production of high quality jet black berries for the frozen food industry.

Logs Weighed as Loaded by Means Of New Device

Overweight logging loads hauled on public highways can be reduced to a minimum by the use of a newly-perfected device which weighs the load as the logs are loaded. Purpose of the device, known as the "Load-Master," is to assure maximum payloads to the hanger of overlong lines, bugaboo of every log hauler who faces the worry and uncertainty of load weight checks by the state police.

Load-Master is manufactured by the Gunderson Bros. Engineering Corp. (Eugene Division), Eugene, Oregon. After three years of testing and proving, the equipment is now available for installation on logging trucks and trailers, by several local dealers. The Load-Master, consists of two diaphragm cylinders which mount under the truck and trailer, and a duplex electric dash indicator which registers the weight of the truck and trailer loads separately.

Spring deflection, as measured by the cylinders, registers variations of an electric current on the dash containing two electric meters. As the logs are loaded the driver merely watches the indicators to be able to balance his load between the truck and trailer and obtain a maximum legal load on each.

Storm Kills Youthful Fire Lookout Guard

PENDLETON, Ore., July 12.—(AP)—A Forest Service worker was injured fatally Thursday 10 miles northwest of Monticumbly by a falling limb during the wind storm that shook northeastern Oregon. Umatilla Forest service officials reported.

Dead was Gladwin E. Hudson, 17-year-old Heppner high school student employed as a summer fire lookout guard.

Oregon Woman Slain by Bullet

ST. GEORGE, Utah, July 12.—(AP)—Sheriff Antone B. Prince said yesterday the body of a woman, found in brush in Zion National Park a week ago, has been identified tentatively as that of Evelyn Frances Callahan, about 23.

He said the woman's mother is Mrs. Ann Theresa Callahan of Junction City, Ore., and the father, Hugh Martin Callahan, who lives at the Sawtelle veterans hospital in Los Angeles. The woman's body was found by a hiker July 4. Officers said death resulted from a bullet wound and Prince said there was evidence of foul play.

PORTLAND, Ore., July 12.—(AP)—Records of the Pacific Telephone and Telegraph Company here show that a woman of the same name as that whose body was found in Zion National Park, formerly was employed here.

She was Evelyn F. Callahan, who would have been 23 years old on Sept. 23. She was employed at the company's Seattle office in 1945 and transferred here last December. She resigned June 5, reporting she was going to her home at Eugene, Ore. Her parents were listed as Mr. and Mrs. H. Callahan, Route 2, Junction City, Ore.

Licenses for temporary theaters were first granted in the reign of Henry VIII of England.
