

Senior Class Graduation Friday Night

Diplomas Will Be Presented 182 Seniors

School Ends This Week
Dr. Harry K. Newburn
Commencement Speaker;

Diplomas will be presented Friday night to 182 graduating seniors, the largest class in Roseburg High School's history. Commencement exercises are scheduled to take place, starting at 8 p.m. in the Senior High School auditorium.

Speaker for the occasion will be Dr. Harry K. Newburn, president of the University of Oregon. Miss Dona Mears will give the valedictory address, and Miss Jane Wigen will give the salutatory.

Graduation ceremonies will climax the school year, Tuesday and Wednesday will be given over to final examinations, Wednesday afternoon to Junior and Senior High assemblies, Thursday to teacher reports, and Friday afternoon, the distribution of report cards.

The list of graduating seniors is announced by Principal Alva Laws as follows:

Constance Augustus, Clinton Agee, Lella Adams, Leon Arney, Harriet Booth, Jerry Anderson, Donna Boling, Dean Bartlett, Gertrude Bollman, Dick Bonebrake, Donna Mears, Leo Bowers, Jane Wigen, Bill Brady, Betty Brannon, Daryl Black, Gerry Broszlo, Lloyd Bowman, Janet Buckingham, Max Chase, Rae Burghardt, Stan Cornutt, Betty Burr, Darrell Davis, Donna Bush-

Lewis' Pact With Steel Industry Ruled Illegal

WASHINGTON, May 27.—(AP) The National Labor Relations Board ruled unanimously today that John L. Lewis' union shop agreement with the steel industry's coal mines is illegal.

Lewis has the same arrangement with the rest of the coal industry but today's case involved only the so-called "captive" mines, owned by 18 steel companies.

The board ordered Lewis to agree within 10 days to stop giving effect to the union shop clause with the steel industry mines and to promise neither to call a strike nor threaten one to get the steel companies to agree to a similar union shop clause in new contract negotiations.

The union shop clause declared illegal specifies that all mine employees must be members of Lewis' United Mine Workers union.

Milk Regulations Termed Unenforceable

PORTLAND, Ore.—(AP) A state milk board enforcement officer believes some of the "unfair trade practice" rules involving the milk industry should be abolished.

Thomas Ohlsen, who testified at the board's price policy hearing here, said the industry was ignoring most of the regulations which he termed unenforceable.

State Agriculture Director E. L. Peterson said any new price schedules resulting from the hearing would not be effective until July 1.

Looking on, left to right, are Dick Bramam, Paul Webb, Dick Swachamer and Jim Ambrose. Glascock is a freshman at Canterbury College in Danville and captain of the Sigma Chi pledge class.

Hops Source Of New Drugs Tested For Treatment Of Tuberculosis

Hops, longtime adjunct to the brewing industry, may find a new use in the treatment of tuberculosis.

If federal research work now in progress continues to prove successful, best quality Oregon hops may find new market outlets through the medical industry. G. R. Hoerner, O.S.C. extension hop specialist, believes,

He bases his belief on the fact that two complex organic colorless acids not found elsewhere in nature, lupulon and humulon, have been extracted from hops at the USDA's western regional laboratory in Albany, California, by a former O. S. C. student, Dr. J. C. Lewis. The two acids—antibiotics similar to penicillin—have been used experimentally to control tuberculosis in mice.

Work thus far in California has been encouraging and lupulon appears to have definite possibilities in the treatment of the dread disease. Incidental to the research, it was learned that both lupulon and humulon react to ultra violet radiation in direct relationship to the amount of the substances present in the

hops. This offers possibility of speeding hop grading by chemical analysis, Hoerner states.

Quantities Wasted
Hoerner believes this new use for hops could easily develop into a market outlet for hop resin, lupulin. Lupulin is the substance from which lupulon and humulon is extracted. Large quantities of the substance are now wasted in hop drying operations because it is mixed with sand.

It is emphasized, meanwhile, that the possible new market outlet offers no hope for poor quality hops. Work thus far carried out by the laboratory dictates that high, best quality hops are required.

About one to one and one-half percent of the weight of hops is recovered as purified lupulon in the extraction process

Communists In Korea Arrest Catholic Clergy

SEOUL, May 31.—(AP) Bishop Boniface Sauer, 74, of the North Korean Wonsang Diocese, and numerous priests have been arrested by Communist officials of the north, the Catholic Mission here was informed.

Bishop Francis Hong, 48, of Pyongyang, capital of Northern Korea, has disappeared, the Mission was advised.

The Rev. Laurent E. Youn, chancellor of the Mission, said that events during May indicated the Communist peoples government in the north has reversed a hands off policy enforced by Soviet occupation forces before their withdrawal last December.

Less Working Time Lost In '49 Labor Disputes

WASHINGTON, May 31.—(AP) Working time lost because of labor disputes so far this year is less than half what it was during the same period last year.

Reporting this, the Bureau of Labor Statistics said the number of strikes and workers involved, from January through April this year, was about the same as the first four months of 1948.

Yet because the strikes were shorter this year, working time lost was 6,850,000 man-days during the first four months of 1949 compared with 15,800,000 man-days for the same period last year.

Tests using mice carried on by the University of California medical school showed that the number of tuberculosis bacilli and the numbers of TB bacilli in the tubercles were greatly reduced in mice treated with lupulon. Work is expected to progress to a point where the new antibiotic will be tested on humans affected by the disease.

Milk Supply Safe From DDT Used In Battling Pests Of Dairy Cattle

"There is no justification for public alarm as to the safety of the milk supply from DDT contamination," says a recent statement by a group of federal agencies and quoted in a new station circular of information No. 455, "Control of Insect Pests of Dairy Cattle," just issued at Oregon State college.

The same statement, however, reported that traces of DDT have been found in milk following its use on dairy cattle or in dairy barns, hence it appears wise to modify previous recommendations of the O.S.C. experiment station by recommending closely related materials that have been found effective and free of danger, the circular shows.

While DDT is still recommended for use on beef animals, in beef barns, hog pens, poultry houses and similar premises, substitute materials are advised for dairy barns and milk rooms as a precautionary measure.

Methoxychlor has given results in preliminary tests nearly equal to DDT in the control of horn flies, so near, in fact that the average user will notice little or no difference, according to the O.S.C. entomologists.

Kills Flies and Lice

While it has not been tried as much against house flies, some states report it gives good control and is partially effective against flies that have developed resistance to DDT.

This newer material is available from Oregon Insecticide companies as a 50 percent wettable powder and as a 5 percent dust. The former is recommended for flies and lice. While it

is slightly more expensive than DDT, cost is still well within the limits of inexpensive insect control, the entomologists state.

The circular gives directions for using this material for various purposes and also reports on new pyrethrum insecticides that have been given more lasting effect. It also recommends continued use of the "old reliable" rotenone as an insecticide for livestock growers, and tells how it may be used effectively.

Polk County Prune Crop To Be Heaviest In Years

DALLAS, Ore.—(AP)—The heaviest Polk County prune crop in years is predicted today by growers. But they said cherries in this area promise to be only fair. The cherry crop in other parts of the Willamette Valley, however, is expected to be larger than last year.
