

This is the gate at the top of the hill through which all now living must pass. The enclosure is carpeted with vivid green, shaded by laurel and by stately pine; it overlooks the fair country which its inhabitants knew. Its air is made fragrant by clusters of lilac, the lavender, that of old memories, too.

The plot is the last home of the Davlins and Nichois, the Smiths and McGulres; the Leonards, Bolsingers and Byrons. Lying near Brockway, James Davlin gave it for the enduring use of his neighboring friends. Well kept and serene, it is secluded but not lonely; it hints at that peace which all of us hope for but which so few ever live to attain. It proves somehow that the troubles we fret over are nothing at all in the eternity of time which eventually we gain.

Extension Home Economics Units In Oregon Mark Successful Year

A successful year in extension home economics units throughout the state, climaxed by reaching the \$25,000 mark toward a goal of \$45,000 for Azalea House, was reported by officers and delegates at the seventeenth annual meeting of the Oregon Home Economics Extension Council at Oregon State College.

Mrs. Earl Ollivant, Brockway, member of the Douglas County Home Extension Committee, and Mrs. H. R. McTaggart, county extension agent (Home Economics) attended from Douglas County. Douglas County's publicity book, prepared by Mrs. Fred Williams Jr., Umpqua, was one of three to be awarded a blue ribbon. Mrs. Williams has served as the county home extension publicity chairman for the past two years.

Close to 200 persons attended the two-day session, representing the 28 counties where home economics extension agents are employed. They met as committees, heard reports of past activities, adopted recommendations for the coming year and elected officers for a two-year period.

Mrs. Edgar Leming, Cornelius, was reelected president; Mrs. Floyd Fox, Silverton, first vice-president; Mrs. L. Kribs, Bend, second vice-president; Mrs. Russell Ebbert, Springfield, secretary; Mrs. Guy Shumway, McMinnville, treasurer, and Mrs. Franklin Loenig, North Powder, historian.

Five district directors chosen are Mrs. M. C. Smith, Blodgett; Mrs. Armas Jakku, Hood River;

Mrs. E. E. Kilpatrick, Merrill; Mrs. Henry Kopacz, Hermiston, and Mrs. Robert Thomas, Port Orford.

A check for \$25,000 was turned over to President A. L. Strand to be held by the O. S. C. Foundation until \$20,000 more is raised to build a student cooperative living group house on the O. S. C. campus. This Azalea House, named in honor of Mrs. Azalea Sager, state leader of home economics extension, is to serve both as a student living center for women and as a headquarters for the state council when it holds its annual meetings.

Douglas County women during the last two years have contributed nearly \$700 toward this project. Mrs. John Bacon, Umpqua, has served as county Azalea House chairman. Each extension unit in the county also has an Azalea House chairman.

PICK AND SHOVEL NOT ENOUGH

Prospecting For Uranium Requires Certain Gadgets, Knowledge Of Geology

By FRANK E. CAREY
Associated Press Science Reporter

WASHINGTON.—(AP)—You've got to have more than a pick and shovel and a hopeful heart to go prospecting for uranium—the "gold dust" of the atomic age.

The Atomic Energy Commission has come out with a booklet giving some of the low-down on how to search for uranium ore—the precious stuff that's used to make bombs as well as peacetime products of atomic energy.

The whole idea of issuing the booklet, says the commission, is to stimulate more prospecting for uranium.

But—You've got to bone up on a little geology.

You've got to be a handy-man with a Geiger counter, an instrument for detecting radioactivity.

And, it would be a big help, too, if you'd load into your modern covered wagon such gear as ultra-violet lamps, photographic plates or film, a metal key, an instrument called a "scintillioscope" and another called an "electroscope."

All of these are aids in spotting the pay dirt.

The commission's 123-page booklet goes into detail on how to select the stuff and how to identify it when you find it, but it gives only very general information on the big question: where?

That's something the AEC boys would like to know themselves.

\$10,000 Bonus Posted
The commission has even set up a kind of jackpot to encourage modern 49-ers to get in there and dig. This is a bonus of \$10,000 "for the discovery of a new deposit and the production therefrom of the first 20 short tons of uranium ore . . . assaying 20 per cent or more uranium oxide."

You can buy the booklet for 30 cents from the government printing office. Those three dimes may put you in the chips, because the AEC promises to pay a minimum price of \$3.50 a pound for uranium oxide.

Here's a little on the detection tests described in case you want to start laying in equipment:

A Geiger counter gives audible "clicks" when there's radioactive material nearby. But you've got to get some fairly big-league clicking before you can be certain the trail is hot. Cosmic rays in the atmosphere can activate the instrument, too, and these may fool you. (Remember: You can't sell cosmic rays.)

Peppers On Test
If you find some rocks you think might contain uranium, take them into a dark room. Put a metal key on some photographic film and then lay the rock on top of the key. If you get an image of the key on the developed film, you may be well on your way to paying off the mortgage.

Another test: If your mineral glows under ultra-violet light, you may have made a strike.

The "scintillioscope" is an instrument that produces bright flashes of light from radioactive material.

The "electroscope" is a gadget that has two leaves of gold which come together in the presence of radioactivity.

You May Dig Anywhere
Will an AEC cop be after you if you go searching for uranium some place other than your own property? No sir.

Open to prospectors for uranium (another radioactive material) are the "vacant and unappropriated public lands" in the states of Arizona, Arkansas, California, Colorado, Florida, Idaho, Louisiana, Mississippi, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming, and the territory of Alaska. So are certain national monuments and one national park—Mt. McKinley.

You can even dig on your neighbor's land, if you get his permission.

If you make a strike on a public land and establish a claim, the commission reserves the right to go and remove the uranium or thorium itself. It says this right "protects the government from, among other things, a

claimholder's refusal to work a deposit."

You'd get paid for any damage or injury caused by this action—and for your services of discovery but you wouldn't get paid for the uranium or thorium the AEC removed.

The AEC says, however, it would not be its policy to exercise this right except "in case of emergency."

Unemployment Jumps To New Postwar Mark

WASHINGTON, June 7.—(AP)—Unemployment jumped 273,000 in May to a new postwar peak of 3,288,000.

The census bureau, reporting this today, commented that "ordinarily unemployment drops between April and May and the increase this year was, therefore, contrary to seasonal expectations."

It said one reason the number of job seekers—outside of farming—rose faster than the number of job opportunities was because school age youths turned out for summer or post graduation work.

Because of the seasonal upswing in farming, employment moved up, climbing 875,000 in May to a total of 58,694,000—slightly above the same point last year.

TO START PRACTICE—William T. Hodson received his Doctor of Optometry degree May 29 at Pacific University, Forest Grove. He is the son of Mrs. George Hartman, Roseburg. He was graduated from Roseburg High School in 1938, and was employed in the office of Dr. H. C. Church, optometrist under the local trades program from 1935 to 1939. He will open an office for practice of optometry in Taft-Oceanlake area.

Because of the alkaline content of ashes, tools and containers used to handle ashes in big power plants must be made of metals which resist corrosion.

Death Claims Last GAR Member Of Ohio Dept.

ALLIANCE, O., June 7.—(AP)—The last member of the Ohio Department, Grand Army of the Republic, died today. He was John H. Grate, 103, soldier, buggy maker and farmer.

Death came as he lay in a coma at his home in Atwater, six miles north of here.

He had served as commander-in-chief of the GAR in 1946-47 and in the preceding year was elected commander of the Ohio department.

The arteries are always empty after death of an organism and early anatomists believed they were normally filled with air.

Surplus Mine Detectors Offered For Police Work

WASHINGTON, June 7.—(AP)—The Army is making available about 3,000 surplus mine detectors for sale to local law enforcement agencies to use in searching for criminal evidence.

The Army Department said today that this is in response to numerous requests.

The electronic device will locate buried firearms and any other object with metal parts.

Among earliest examples of American folk art are glassware objects blown after hours by glass workers for themselves and their friends, from the fag end of the glasspot.

Behaving was formerly considered an honorable form of execution.

NO FALSE ALARM

TOKYO, June 7.—(AP)—Screams came from a downtown Tokyo movie theater.

Passersby halted, noted outside showboards advertising a horror film, smiled and started to pass on.

Just then a screaming woman and an angry man emerged. The man shouted to the doorkeeper: "My wife was just bitten by a rat."

America is buying Studebakers at an all-time record rate!

Studebaker's the stand-out in solid money's worth
New decorator-fabric upholstery • New body colors • Self-adjusting brakes • Variable ratio "extra-leverage" steering • Panoramic vision • Seats centered between the axles • Low center of gravity • Glass-protect "black light" instrument dials • Automatic hill holder—available on Champions at slight added cost, but standard on other models. • Automatic overdrive, Climaticizer heating and ventilating, white sidewall tires and wheel trim rings or discs are optional at extra cost on all models.

JUST a look at the streets and highways and you know a Studebaker buying wave is sweeping the country.
All America is thinking Studebaker, talking Studebaker, buying Studebaker as never before right now. 1949 is all-time-high year in Studebaker sales and production.
Take a proud place of your own in this Studebaker success parade. Get Studebaker style that sings and Studebaker savings that count in your new car.
Stop in and treat yourself to a close-up eye-ful of a '49 Studebaker—it's far and away the most for your money in any new car.
