Seed of the new Talent alfalfa, developed at the Southern Oregon branch experiment station, will be available for limited general distribution this fall or next spring, announced Harold H. White, in charge of crops work, at the annual station field day held recently.

About 122 acres are expected to be harvested for seed this season of the station and by cooperating farmers who are growing the new variety to increase the seed supply. Much interest was shown in the new variety by the hundreds of farmers who toured the station during the field day.

Dr. Louis Gentner, entomologist and formerly in charge of the crops program, sketched the development of this variety from 1937 when it was one of numerous strains and varieties planted in test rows. It early showed its superiority and has since proved to be the best among 31 strains and 23 varieties for southern Oregon conditions. Limited tests have also been made elsewhere with good preliminary reports from also been made elsewhere with good preliminary reports from Willamette valley and Klamath county trials, Gentner said.

Known originally merely as French strain No. 19274, it soon showed that it started earlier in the spring, grew later in the fall and showed regrowth after cut-ting much quicker, than other To fit

Ag. Conservation **Program Varied** To Meet Needs

Rather than have any pre-scribed program to be followed alike by all cooperators, the agri-cultural conservation program provides assistance on a number of practices which will fit into the servation needs of individua

Douglas county farmers, there-fore, need not walt until the 1950 agricultural conservation program is announced before plangram is announced before par-ning their own conservation pro-grams for next year, says J. F. Bonebrake, chairman of the coun-ty agricultural conservation com-mittee. He points out that many farmers are already planning the ervation work they will carry

out next year.

As the chairman explains, each farmer knows the conservation problems on his farm. If too much

problems on his farm. If too much of the top-soil is being washed off the slopes or if yields are going down on a particular piece of land, he can plan his practices now as well as next winter to correct the difficulties.

Mr. Bonebrake advises each farmer to check his farm carefully for signs of erosion and deterioration, and then to plan to use the Agricultural Conservation Program accordingly.

Program accordingly.

As the chairman puts it, "the program has been effective in getting better conservation practices introduced and carried out on a majority of the farms in the country, there is still room for im-

provement. The farmer can use the program most effectively if he plans his conservation practices to meet the most important needs of his farm. All of the conservation practices approved for Douglas county may be needed on a particular farm but the ones most needed should be used first."

Less Wheat, More Meat Animals, Asked Of Farmers

WASHINGTON, July 18—(P)—
A 1950 production program calling for less wheat but more meat animals and dairy products was laid before the nation's wheat farmers by the government last week.

Since flaxseed is no longer scarce in the United States, the import duty is being restored to 50 cents per bushel, instead of the 32s cents collected on flax seed imports during the war and early postwar periods.

The 1930 tariff act rate on such imports was 65 cents per bushel, but this was lowered to a "normal rate" of 50 cents under recipation of the collected of the collected on flax seed imports was 65 cents per bushel, but this was lowered to a "normal rate" of 50 cents under recipation of the collected of this year's crop.

The acres taken out of wheat should be put to grass and pasture for grazing of beef and dairy cattle, sheep and lambs, he said, because consumers need more of

rate of 321 cents per bushel, but this was lowered to a "normal rate" of 50 cents under reciprocal trade agreements signed with Argentina and Uruguay in 1941 and 1942. The agreements provided the temporary "special" rate of 321 cents per bushel in recognition of an abnormal scarcity of flaxseed and linseed oil. Compared with the scarcity existing at the time the agreements were negotiated, the United States now has a substantial surplus on hand from domestic production.

Wheat To Be Free Of Rigid Marketing Quotas Washington, July 18.— Grown as systhat plans for invoking rigid marketing quotas on the 1950 wheat crop have been dropped.

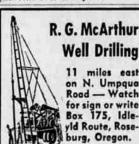

But he said acreage allotments—which are less restrictive in their effect on production—will be imposed on growers in a move to get a downward adjustment in more comply will be eligible for direct specific to the complete of the production of the latter products.

Under the 1950 program, each farmer will be given a share of a national wheat planting allotment of 68,900,000 acres. His share will be based upon his past production history. While the allotment is about 17 per cent below this year's acreage, the reduction.

Normal Harvest In Oregon Looms

Loans to farmers under the government's storage construction program may now be made on "immovable" storage, J. F. Bonebrake, chairman of the Douglas County Agricultural Conservation committee, said today. Such loans will be made to finance new construction or additions to existing facilities.

An "immovable" facilities.
An "immovable" facilities, according to Bonebrake, means one which is so permanent that it cannot be reroved without demolishing it.

Each loan on immovable storage must be approved by the State Production and Marketing Administration committee before a storage loan committee before a storage loan committee before a storage loan committee before as the started. The committee will review the application before any title search is started.

Loans to farmers for the con-There will be few bumper crops—and few failures, the fed-eral crop reporting service indi-cated.

The fruit harvest, however, will be the best in years, Niels I. Nielson, federal forecaster, said. He forecast that Bartlet pears would reach a record 2,438,000 bushels.

The peach crop was estimated at 860,000 bushels, about 45 per cent above last year; and the apple crop at 2,800,000 bushels, about 5 per cent higher than 1948.

Hay field crops will be 15 per cent below last year's yield, but will be close to the 10-year av-

sued, Bonebrake stated. The committee will review the application before any title search is started.

Loans to farmers for the construction of farm storage facilities are available to any tenant, landlord — including one who rents his land on a cash-rental basis—owner-operator, or partnership of producers having an interest in the production and storage of wheat, rye, oats, and barley and flaxseed.

In the case of loans to tenants, the property on which the immovable storage is to be located must be under an assignable long-term lease which will run for at least 10 years beyond maturity of the loan. The lease must also permit the construction or else the owner of the land must give his written consent to the construction.

Loans under the government's farm storage program will be available in all areas through June 30, 1950. Producers are encouraged to obtain their loans from approved lending agencies. Direct loans will be made by the Commodity Credit corporation only if the applicant cannot or does not wish to obtain credit from other sources. The loans will be for terms up to 5 years, payable in annual installments. The interest rate is 4 percent.

The maximum amount of loans shall be 45 cents per bushel of the rated capacity of the storage facility, or 85 percent of the cost, whichever is the smaller. Each loan on immovable storage must be secured by a first mortgage. No second mortgages, however, will be accepted on immovable storage structures not located on farms. The cost of title search and recording of documents will be borne by the borrower. title search and recording of do cuments will be borne by the
