#### U. S. Mishaps In Atomic Age Kill More Than Bombs

CHICAGO, Aug. 8—(P)—Atom bombs killed some 110,000 persons in Japan four years ago but since the atomic age began, the National Safety council says, accidents have caused 400,000 deaths in the United States.

The comparison was made by Ned H. Dearborn, council president, in the National Safety News.

He said the accidental death toll in other countries of the world cannot be estimated, but if the world rate is near the Am-erican, about 6,000,000 persons erican, about 6,000,000 persons have been killed by accidents in the four years of the atomic era.

The 400,000 Americans have been killed, Dearborn said, "Not by the new products of genius, but by the old stupidities."

the first atom bombing was ob-served with shattered Hiroshi-

ma's 30-year plan to make itself a model city for peaceful community living.

Mayor Shinzo Hamai told the city's survivors details of the plan after bells in the "Peace Tower" pealed in memory of the "8,000 who died in the blast.

#### Lower Umpqua Highway Job Steadily Advances

Work is progressing steadily on the Umpqua River Navigation company's contract of improving the section of the Umpqua highway in the vicinity of the Mill creek bridge. O. H. Hinsdale is personally supervising this work. Most of the right-of-way has been cleared, and material is now being moved. Some of the filling will be done by dredge at a later date. About 26 men were sent to the fire. Aided by residents of the area, saved farm buildings and livestock from destruction. Only one building, a barn on the Pete Ulam place, was seriously threatneed. Some sheep were scorched. There was also a fire Sunday, he reported, on Beals creek, across the South Umpqua river from Days Creek, of about one-fifth of an acre in extent. Its cause was not determined. Fergu-

filling will be done by dredge at a later date.
Delay in letting the contract from the date originally planned, may set back the entire project enough so that the oiling will have to be done next spring, unless there is a late, open fall. Hinsdale had considerable road-building experience in the construction of logging roads while in charge of the Gardiner Lumber company.

New 3,000 horsepower airplane engines have as much power as a big locomotive.

"Fortunately, we have good fire rotection," he said. "Our hose ment responded promptly."
