Production Of Corn, Wheat During 1949 Is Higher Than Estimates Made Last Month

WASHINGTON, (AP)—The agriculture department, in its final report of the year, estimated this year's corn crop at 3,377,790,000 bushels and the wheat crop at 1,446,463,000 bushels.

The corn figure is 20,172,000 bushels more than the 3,357,618,000 forecast a month ago. It compares with last year's revised estimate of 3,681,793,000 bushels and with the ten-year (1938-47) average of 2,787,628,000.

The wheat estimate is 20,237,000 bushels more from the 1,126,226,000 forecast a month ago. It compares with last year's revised estimate of 1,313,534,000 and with the ten-year average of 991,850,000.

Production of these major grain crops was large enough to create a surplus requiring the department to impose limitations on next year's crops. Acreage planting allotments already have been set up for wheat and soon will be announced for corn.

Production of winter wheat was estimated at 901,668,000 bushels, compared with 894,874,000 forecast a month ago. Last year's revised estimate was put at 1,007,863,000 bushels compared with the ten-year average of 726,533,000.
