

U. S. Deficit For 1950 Fiscal Year Below Estimate

WASHINGTON — (AP)—The government finished fiscal 1950 on June 30 with a deficit of \$3,122,102,357.45, the treasury reported. That was about \$2,300,000,000 or 40 percent less red ink than anticipated in an administration estimate made only last April 20. The government went in the hole for the year — for the 18th time in the last 20 years — by spending \$40,166,835,914.82 while taking in only \$37,044,733,557.37. The federal debt stood at \$257,376,855,385.01 at the year's end last Friday. The treasury had \$5,517,087,691.65 in cash on hand at the time. Despite the bright showing against administration estimates, the deficit was about \$1,311,000,000 greater than that recorded for the previous year.

America's Ability To Wage War Greatest in Peacetime History, Military Heads Say

WASHINGTON, —(AP)—America's ability to wage war is the greatest in peacetime history.

Top military leaders agree this is so, but they caution that our potential enemies are formidable too.

They add that in any war today surprise tactics and speedy all-out mobilization could defeat greater military might.

The United States could reach, from western hemisphere bases, any "significant" bombing target on earth, some military officials say, but Russia has the equipment to long-range bomb us also.

One top Pentagon official says it's the same old army story, but with a new twist: "Getting there fastest, with mostest—atom bombs."

To forestall the possibility of a sneak air raid, a radar network is operating in the northwest, northeast and Alaska. This is to detect the presence of enemy planes. But the network is far from complete. The buildings and land alone needed for additional installations will cost an estimated \$80,000,000. Nothing had been appropriated. The air force is spending \$50,000,000 from other funds to get this expansion work started.

A staff of about 170,000 civilian

volunteers is being recruited to help watch for enemy planes and to broadcast warnings in case of attack.

Effectiveness At Peak As for military strength, defense Secretary Johnson has said: "The state of readiness of our armed forces and the military potential of our country are greater today than in any previous peacetime period in the nation's history."

Manpower totals 1,458,400 people, compared with 2,235,000 at the time of Pearl Harbor. We have 776,600 fewer military personnel now than at the time of the Japanese attack, but Gen. J. Lawton Collins, army chief of staff, has said:

"We stand today stronger in the effectiveness of our men in uniform than at any time since the end of the world war II."

Dr. Vannevar Bush, head of U. S. scientific research and development in world war II, told reporters we are well ahead of Russia in atomic warfare developments.

Sea Power Tops World There is no argument over the assertion that our navy is the greatest in the world. In case of war it probably would have the support of the second greatest, that of Great Britain.

But coupled with this fact is another: Russia has a fleet of at least 270 submarines much more

formidable than those used by Germany in world war II. If we had to maintain a long supply line, across the Pacific and Atlantic oceans, this would be a somber situation.

However, military men point out we have developed new anti-submarine devices, too.

We have a powerful air force with bases around the world, some flanking Russia and her satellites.

The latest compilation of "acknowledged" bases—there are others, secret ones—made for the Associated Press, shows we have 17 navy bases scattered around the world and more than 40 air bases.

And we have troops scattered around the world to protect them.

War Materials Problem Military construction figures give some hint of the building program that has been started.

Officials told congress they planned to spend around \$240,000,000 on the projects. Included is \$23,000,000 for a secret navy base. Its location and purpose were not explained.

The army asked \$74,224,000 to strengthen troop bases for the protection of foreign bases and airfields.

Officials also have disclosed that our pile of critical and strategic war materials is less than half complete.

This pile consists of materials we do not produce in sufficient quantities to supply our needs. They must come from foreign nations, some of them possible enemy nations. War would shut off imports. The size of the pile apparently is based on our needs for an all-out war effort lasting several years. It contains such things as tin and asbestos.

Officials estimate the value of the pile is around \$1,500,000,000 today, or slightly more than 40 percent of its planned size.

Bulk coal is often treated as fragile cargo because customers demand it be delivered in specific sizes and rough handling tends to break up the lumps.

No Tire Shortage Threat, Assurance

NEW YORK, July 6 — (AP) William O'Neil, president of General Tire & Rubber Co., says there is no tire shortage, and no threat of one.

"Despite false rumors, there is no reason for anyone to be stampeded into buying tires through fear of rationing," he said in a series of newspaper advertisements.

"Thanks to American research and industrial know-how, our supply of rubber — for tires vastly superior to prewar — is tremendous. All rubber manufacturers have plenty of tires to sell."

He said his statement was being made as a public service because of reports of a widespread wave of "fear buying" of tires.

O'Neil's view was shared by spokesmen for several other major tire makers, and by the Rubber Manufacturers association, they were questioned followed scattered reports that some dealers in Indianapolis, New York and elsewhere were urging customers to "buy now while you still can."

Careless Match Toss Causes \$500,000 Fire

HUMBOLT, Tenn., July 6 — (AP) — A fire in a little pile of trash spread over an entire block in the fruit and vegetable market district Sunday, doing more than \$500,000 damage and injuring a fireman.

Fire Chief R. I. Grace said the fire was started by a match carelessly tossed into a pile of straw and paper on a loading platform.

Seven business houses were destroyed, as were the loading platform, a large shed, a water tank and five refrigerator cars. A parked automobile also was gutted.

formidable than those used by Germany in world war II. If we had to maintain a long supply line, across the Pacific and Atlantic oceans, this would be a somber situation.

However, military men point out we have developed new anti-submarine devices, too.

CHURCH STEEPLE BLOWN UP—The steeple of St. George's Protestant Church is blown up by an East Berlin demolition squad after Communists declared it a safety hazard.

THIS MEANS YOU!—Fed up with parkers who ignored his "No Parking" sign near a curb mailbox, postmaster Leopold Morris of Victoria, Tex., erected this signpost that says it in five languages. From top to bottom, the signs say "No Parking" in Hebrew, German, Spanish, Italian and English. The trouble now is with people stopping too long trying to find out what the signs say.
