

**LOUD SPEAKERS**—A \$200,000,000 ring of American radio stations to encircle the U. S. S. R. and its satellite nations is being considered by Congress, following its recommendation by Brig. Gen. David Sarnoff, chairman of the board of RCA. Map shows how programs, telling the American story, would be beamed into the Iron Curtain countries. General Sarnoff estimated that the \$200,000,000 initial cost would be about the price of two battleships and that maintenance would run about \$50,000,000 a year.

**Council Rejects 'Unfair' Label For Newspaper**

PORTLAND, July 26.—(P)—The city council Monday sent back to a teamsters' union affiliate a request that the Oregonian be placed on the "unfair" list. The Central Labor council had recommended the action after conferring with the newspaper management earlier. The newspaper and magazine union's business agent, Frank Malloy, had charged the newspaper with failure to negotiate for representation of circulation workers. Malloy was instructed to negotiate further on the issue.

one will be allowed to enter those areas without a permit. These are the areas affected: Ten townships of the Tillamook burn area, mostly in Tillamook county. The Green Springs area of Klamath county and the Jenny creek area of Josephine county. These areas adjoin each other. The Yawkey tract, Horse Glades and Yamsey mountain areas of the Klamath forest protective association unit in Klamath county.

**ITCH** (Scabies) is highly contagious and will continue for life if not stopped. Its sole cause is the itch mite, which is immune to ordinary treatment. EMSORA kills the itch-mite almost instantly. Only three days' EMSORA treatment is required. Mail orders given prompt attention. Fred Meyer Drugs, Roseburg.

**'Death Sand' New Killer Reported As U.S. Project**

By ROBERT GOLDSTEIN CHICAGO, July 26.—(P)—Is the United States working to develop "death sand"? A University of Illinois physicist thinks it's likely. This slow-acting poison, an invisible form of radioactive dust, could be the most insidious most humane — type of atomic weapon known. Dr. Louis N. Ridenour said the substance would be "the lightest and most transportable of all the weapons of mass destruction." The U.S. Atomic Energy commission's plutonium production plant in Hanford, Wash., could produce enough of this dust every month to contaminate 144 square miles, he added. Radioactive sand, he believes, would be made by dipping tiny sand particles or metal powder in a water solution of radioactive salts. These salts, when dried, would cling to the outside of each particle. Unless warned in advance, residents of an area sprayed with this dust would not know they were in danger until symptoms of radioactive poisoning appeared two weeks or a month later. Then it would be too late. They would have inhaled it and had their clothing covered with it. A few days later they would die. But if warning were given, Ridenour said, each member of the target population would have a choice whether to live or die. Persons who remained in the area certainly would die, "while

**Three Forest Regions Closed By Gov. McKay**

SALEM, July 26.—(P)—Governor Douglas McKay Monday ordered three forest areas in Tillamook, Klamath and Josephine counties closed because of forest fire hazards. The closure order means that no

giving an excellent chance of survival to a person who flees at once, with a folded or dampened handkerchief over his nose and mouth. "The novel and unique properties of this weapon make it useful in special situations," Ridenour said, in an article in the bulletin of the atomic scientists. The Smyth report, the official government account of research that went into development of the atomic bomb, referred in 1945 to the possibilities of radiological warfare. Since then there has been official silence. Ridenour speculated that this silence is "expressive of classification (secret work on the project) rather than disinterest."
