Research Deals With Fir Grading

Visitors at the Siskiyou-Cascade forest service research center in Roseburg Tuesday were Eugene Fobes and Fred Malcolm from the Forest Products laboratory in Madison, Wis. They are conducting research studies at saw and plywood mills for the purpose of determining how to achieve more accurate grading of Douglas fir logs. They have returned to Portland after spending time in Medford making arrangements for a study at the Timber Products Co. veneer plant.
 C. A. Davidson of the division of flood control, California forest and range experiment station, was also a visitor Tuesday at the research center here. Davidson delivered six instruments for measuring the sediment load carried by streams. These instruments are to be used on the Umpqua and Rogue river drainages, where it is recognized forest management and logging practices must be conducted in a way that erosion and sedimentation will not endanger water and fisheries resources.

Lattimore, controversial figure in the recent senate investigation of communism in the State department, said "it will be the end of our democracy if we ever let the independent writer be terrorized."

He spoke at the annual Bread Loaf conference of authors, publishers, writers and newspapermen.

He charged that "fanatical groups" are trying to enforce a "new standard of debate—debate by accusation and vilification."

Lattimore made no reference to the cancellation of a scheduled speech Sunday night at a hotel in Portsmouth, N. H., after a pool of guests showed a majority opposed his appearance.
