No. 1 Cause Of Cancer Studied By Researchers

By HOWARD W. BLAKESLEE

(By The Associated Press)
KANSAS CITY, Kansas — (AP)—The University of Kansas medical school is making progress in its study of the No. 1 suspect in the cause of cancer.

This suspect is nucleic acid, a substance present in all living tissues.

Dr. Robert E. Stowell, director of the Kansas university cancer research program, described the work. It is supported by the National Cancer Institute, American Cancer Society, the U. S. Atomic Energy commission and private donors.

"We are looking," Dr. Stowell said, "for the substances that control growth, because cancer is abnormal growth. It is extremely important to identify them, because we could hope to control the growth of cancers."

"The best suspect is nucleic acid and nucleoproteins the latter being proteins containing the nucleic acids, which control heredity."

"We have a number of leads. We know there are two types of the acid and that cancer cells contain excess nucleic acid. Also that X-rays and ultra-violet rays, both of which can cause cancer, alter the acid."

"The viruses that cause animal cancer likewise contain the acid. So do the particles called the 'milk factor' that cause breast cancer in mice."

All living cells, cancerous or healthy, are rounded houses so tiny they can be seen only in microscopes, yet filled with literally hundreds of little chemical machines. The job under way here is to see what the acid is doing among the machines.

Test cells are frozen in a fraction of a second in liquid nitrogen at nearly 300 degrees below zero. This kills them but leaves the parts intact. They are dried and sliced, sometimes into 250 sections from a single cell.

The specimens then are studied by six groups of scientists.

Republicans In Red In Fight For Congress Control

WASHINGTON — (AP)—Three major Republican organizations reported they have spent more than \$1,000,000 in the battle for the control of Congress in next week's election.

That's about \$70,000 more than they took in.

The GOP financial statistics were filed with the clerk of the House under the federal corrupt practices act. No comparable reports were filed by the Democrats, but were expected late this week.

The Republicans filed these separate reports:

1. Republican national committee: receipts from Jan. 1 to Oct. 26 were \$657,107 against an outlay of \$678,441.

2. National Republican Congressional committee: receipts from Jan. 1 to Oct. 25 were \$315,636 against expenses of \$311,595. From Sept. 1 to Oct. 25 the committee took in \$105,436 and spent \$145,973.

3. Republican senatorial committee: receipts from Sept. 1 to Oct. 23 were \$45,218 and expenditures \$98,974. The committee did not list in its latest report its receipts and expenditures earlier this year.

Large disbursements from the senatorial committee's coffers included these Republican senatorial nominees:

Senator Morse of Oregon, \$2,500; Walter Williams of Washington, \$5,000; Senator Taft of Ohio \$5,000.

The CIO Political Action committee also reported it has operated in the red financially this year, taking in \$310,227 and spending \$362,869 from Jan. 1 to Oct. 24.

The CIO did better, though, in its "educational account," which concentrates on state elections. The "educational account" took in \$109,376 and spent \$56,838, including contributions of \$7,500 to the campaign of James Roosevelt for governor of California and \$12,500 to the Chester Bowles gubernatorial campaign in Connecticut, both Democrats.

The American Federation of Labor's League for Political Education reported total receipts of \$514,584 from Jan. 1 to Oct. 26 but did not total its long itemized list of expenditures.

Ring-necked pheasants can run along the ground at a speed slightly faster than a 10-second man doing the hundred yard dash reports the National Wildlife federation.

BARROWFUL — Three-year-old Tommy Ferebee wheels in a 52 1/2-pound channel base caught by his father, E. C. Ferebee, in the surf at Bogue Inlet, hard by Morehead City, N.C.

Otters, when hunting for fish, always swim up stream. This is because fish, when waiting for food or reposing, have their heads up the water. The otter can more easily approach them from behind.
