**Communist China Doesn't
Realize Its Present Status
As Tool For Soviet Designs**

By DEWITT MACKENZIE
AP Foreign Affairs Analyst

We folks of the Western world know—or at least should know by this time—that Moscow is behind the Communist aggression in Korea.

We know that this is part of the Soviet plot to throw us off balance militarily, and at the same time bleed us economically so as to whittle us down to Russia's size.

However, the people of Asia as a whole don't know these facts. Even the millions of Red China, who are so vitally concerned, don't know them.

On the contrary the Chinese have been bombarded by the Communist government at Peiping with propaganda that they are resisting American aggression in Korea. They are being told that the United States is bent on a program of imperialism in the orient.

As a matter of fact, well informed Chinese Nationalist quarters tell me there is considerable doubt whether the Chinese Communist leader, General Mao Tze-Tung, has figured out yet just what his position is as regards the Russians. Many think he pictures himself as having an equal partnership in the creation of a great Communist empire in which China will play the leading Asiatic role.

If that is what he thinks, he is due for a rude awakening before long. He certainly is playing an important part in the creation of a communist empire, but neither China nor any other satellite has equal partnership with Russia. The sovereignty of each and every one of them rests in Moscow. They

are just cogs in the Soviet wheel.

The foregoing is an important prelude to the projected appearance of a Chinese Communist delegation at the United Nations to discuss the explosive Korean situation which has in it the possible makings of another global war. The aim of the peace organization is to neutralize China by convincing her that the U.N. forces haven't any designs on her territory, and plan the creation of a united and democratic Korea which will in no way threaten China.

Chiang Urges Revolt

Coincidentally, Generalissimo Chiang kai-shek, the Nationalist leader, has inaugurated daily broadcasts to the mainland from his headquarters on the island of Formosa. These messages call on Chinese troops not to fight against the United States and the other members of the United Nations, who are the friends of China. Recently for instance, the "Gimo" broadcast:

"I wish to tell you this plainly: when Chou En-Lai (Chinese Communist premier in Peiping) and Mao Tze-Tung (Communist president) send you to fight in Korea they do not do it for China, nor for Korea, but entirely for Soviet Russia."

The Nationalist broadcasts also have been calling on the Chinese troops in the Communist armies to revolt where they can. And Nationalist quarters say some mutinies have been reported. In any event, these daily messages are bound to help spread the truth about Moscow's true designs in the Far East.

The United Nations strategy goes an important step further. Having emphasized the good intentions of the U.N. operations in Korea, the peace organization is making it clear that continued Chinese intervention in Korea will result in strong action.

In that connection it is interesting to note that Chiang Kai-shek still is ready and anxious to contribute his army of some half million troops to any United Nations operation in Korea.

**New Central Oregon Road
To Idaho Will Be Opened**

PRINEVILLE — (AP) — An alternate route from central Oregon to Idaho will be opened today, road officials said here.

R. D. Walton, engineer for the U. S. Bureau of Public Roads, said a relocated 19-mile stretch of highway 28 would be open to traffic shortly. The relocated stretch is over the Ochoco mountains, 50 miles east of here.

It has been surfaced with a rock base, but will not be given a final oil surfacing until spring. Opening of the highway is expected to aid movement of lumber from sawmills at Mitchell, 50 miles east of Prineville.

FAITHFUL TO HER PUPS — This little girl evidently wants to stay with her two bulldog pups, booked for therapeutic treatment in this newly-developed low pressure chamber at Frankfurt, Germany. Chamber, containing infra red and ultra violet ray lamps, has been used successfully in cases of animal distemper, bronchitis, rheumatism and skin diseases.

**Fixing Of Tax Bases
By Local Units Favored**

SALEM — (AP) — The legislative interim tax committee has recommended that local taxing units be allowed to establish new property tax bases at primary or general elections.

The committee will submit its recommendation to the legislature. Under the proposal, a school district, for instance, could establish a new tax basis and thus not have to hold special elections each year to raise money for budgets.

At its September meeting, the committee had decided to allow a new tax bases to be created at any election at which 40 percent of the registered voters turned out.

But the committee has now decided against the 40 percent requirement.

WEYERHAEUSER INTEGRATED PLANT AT SPRINGFIELD, OREGON. To get maximum use and value from the forest crops we diversify our manufacturing—make a variety of wood products. We group (or integrate) these different types of processing plants on one millsite for economy and efficiency.

**What "Integration" Means to You—
in Peace or for Defense**

THE Springfield plant pictured above demonstrates the diversification and integration principle which is being applied to all of our millsites as rapidly as possible. Through this system of more efficient and economical operation we are able to make more products from less timber. It is possible to build such integrated plants because each one is backed by a tree farm growing an endless supply of timber—making this a dependably permanent industry.

In peacetime such efficient plants offer steady jobs, community stability, a steady source of tax revenue to government for schools and other uses, a more reliable source of income to shareholders, and a steady flow of fine forest products for customers.

In time of national emergency, such a plant can be instantly and effectively converted from turning out lumber for homes and pulp for books to making lumber and pulp for military uses.

Yes—America's huge, efficient productive capacity created to provide pleasant living and security in peace, is one of her greatest strengths in war!

S. W. (BILL) MILLER SAYS

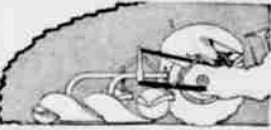

Measure **TRACTION..** AND
YOU'LL CHOOSE THE NEW **FERGUSON TRACTOR!**

Your next tractor could cost you hundreds of wasted dollars in needless upkeep on a big expensive machine—all because of the often mistaken idea that a lot of built-in weight is the only way to make sure of ample traction.

With the Ferguson System, there's no need for ballast weight. Traction is developed automatically as needed. 3-Point Linkage of implement to tractor and hydraulic control make use of natural forces to automatically increase weight—and traction—to suit the job. Traction with the Ferguson System gives the Ferguson Tractor power efficiency equal to tractors of much larger size and greater weight.

The specially-designed Continental valve-in-head engine stresses economy as well as more than ample 2-powder.

Before you buy a new tractor, measure the job-to-job performance of the New Ferguson against any other tractor.

**THE FERGUSON SYSTEM
CHANGED THE TREND OF
TRACTOR AND IMPLEMENT DESIGN**

The Ferguson System uses a different basic principle of applying and controlling power with greater efficiency. Implement is attached to tractor with two bottom links which pull and a top link which pushes forward and downward above the rear axle. The built-in hydraulic system provides both Finger Tip and Automatic Implement Control and many other big advantages.
