An Open Letter... FROM YOUR DENTIST

Dear Parent: Let us give our children better teeth!

We people in Roseburg take pride in the welfare of our children. Yet there is one aspect of their welfare that is being sadly neglected - their dental health. Our dentists tell us that they cannot cope with the rate of tooth decay in our young people's teeth. **ROSEBURG NEEDS FLUORIDATION!**

What Is Fluoridation?

It simply means that a vital natural element which God has given us to insure strong healthy teeth sometimes has to be added to a community water supply so we can have the necessary minerals for good dental health. The addition of the recommended amount of fluoride will not affect the taste of our water.

What Does Fluoridation Do?

It will reduce up to 65% of dental decay in our children's teeth and will continue to protect their teeth all their lives. This will result in the saving of thousands of dollars in dental bills for Roseburg parents.

It Is Safe

Over 1,100 communities with a total population of over 22 million people have added fluoride to their water supply, including such cities as San Francisco, Washington, D. C. and Philadelphia. Three million people in the United States are living in communities drinking water naturally containing fluorides in concentration of one part per million. In all these areas it has been proven safe to old and young, sick and well and one million are drinking fluoride-bearing water higher than that recommended for fluoridation.

Fluoridation has been approved by the American Medical Association, the American Dental Association, Umpqua Dental Association, the National Research Council, the US Public Health Service, the Commission on Chronic Illnesses and by our own state and local Medical and Dental Societies, together with many other groups. These scientific organizations represent people who are qualified to make important decisions concerning procedures which would be of benefit to the health and welfare of our citizens. No other procedure in the history of medicine has ever had such extensive trial before being universally adopted as safe and acceptable.

We urge you to support fluoridation.
