

**Labor Committee Gives Candidates Endorsement**

PORTLAND — Labor's Committee on Political Education for the Third Congressional District Monday night endorsed 24 Democrats and 5 Republican candidates in the November election.

James T. Marr, executive secretary of the state labor council, said Oregon labor union members have contributed \$12,435 so far toward a goal of \$25,000 to help candidates in Oregon.

The district committee followed the state labor lead in endorsing Sen. Wayne Morse and Rep. Edith Green, both Democrats, for reelection. For state office the group endorsed Democrats Robert Holmes for governor and Monroe Sweetland for secretary of state; Republicans Sig Unander for state treasurer and Carl Francis for attorney general.

Other candidates endorsed are running for county and legislative office.

**Pessimist Doesn't Have It All To Himself; Some Ray Of Hope Held For Optimist**

By BEM PRICE  
Associated Press News Analyst

WASHINGTON — The Russians keep testing nuclear weapons in Siberia. From time to time the United States lets go with a few on a mid-Pacific island. The British plan to do a bit of testing in Australia.

Some scientists are worried that the radioactive fall-out from these experiments is going to produce a world population just, loaded with crazy, mixed-up genes.

Genes are nature's built-in gadgets for determining whether children are going to have brown eyes or blue, two heads or one, and whether they are going to be idiots or geniuses.

As it now stands, the situation is

enough to make a pessimist smile—a pessimistic smile, of course.

The latest news from the world-is-going-to-pot front comes from Atomic Energy Commissioner John von Neumann.

Von Neumann said in a weekend world broadcast that within a few decades mankind will achieve global climate control and raise the awful prospect of weather warfare.

Can you imagine sending lightning bolts hurtling down on your enemies? Or maybe aiming a hurricane? Or perhaps causing drought or floods?

Coupled with atomic and hydrogen bombs, this weather warfare business has fascinating possibilities for utter world destruction.

But there is a ray of hope—the silver lining in the mushroom cloud.

The same day that Von Neumann predicted weather warfare in a few decades, the Los Alamos, N.M., atomic energy laboratory disclosed it had been working for the past year on atomic-powered rockets.

Presumably, if and when these A-rockets are perfected, mankind will have the means to blast off for Mars, Venus, Jupiter, or any of the other assorted planets knocking about in space.

Who knows but what mankind will be able to find and colonize another planet somewhere in that mysterious void now known as the universe?

By the time mankind succeeds in making this planet totally uninhabitable, perhaps he will have perfected the means for leaving it.

And this, naturally, raises an interesting subject. Since accommodations in space ships probably will be fairly limited, who will get to make the journey to salvation?

Under the Democratic system everybody should have an equal system there will be no argument since the bosses will make the selections.

If the Democratic system is chosen with its interminable arguments, talk about the rights of man and justice, then life will continue on planet "X" as it has on earth. Mankind, in brief, can go on being contrary.

But if the Russian system with its planned economy and thought control is selected, it wouldn't be worth the trip anyhow.

Wouldn't it be nice if we never had to make the choice?

**Pravda Accuses U. S. Of Trying To Block Treaty**

MOSCOW — Pravda accused the United States Thursday of trying to block resumption of Soviet-Japanese relations by proposing an international conference to deal with territorial issues.

The Communist Party newspaper said John M. Allison, U. S. ambassador to Tokyo, had told Foreign Minister Shigemitsu of Japan it was time to call an international conference to discuss the Soviet-Japanese dispute.

Peace talks between Japan and Russia broke down in Moscow last month. Japan demanded the return of two southern Kurile islands, Kunashiri and Etorofu.

LONDON — An authoritative source said Thursday Britain refused to join the United States in acknowledging two southern Kurile islands are a part of Japan.

The United States Wednesday

**Langlie, Magnuson Debate Cost Of Power From Dam**

SPOKANE — A sharp disagreement on the cost and power potential of a high federal dam at Hells Canyon on the Snake River marked the first debate between Washington State senatorial candidates, Monday night.

Gov. Arthur B. Langlie, the Republicans' choice to battle incumbent Warren G. Magnuson in the Nov. 6 general election, contended a federal dam in Hells Canyon would "saddle" the people of the

Pacific Northwest with 5-mill power.

Magnuson, who polled 150,000 more "complimentary" votes than Langlie in the Sept. 11 primary election, retorted that power from the high dam would cost less than 3 mills.

The two candidates, both experienced politicians with strong voting power, greeted each other warmly when they met at a local television station before the start of the 30-minute, televised debate, off in a brisk but friendly manner. Magnuson and Langlie each was given eight minutes to state his views on power, three minutes for rebuttal and two minutes for a closing statement.

Neither man interrupted the other during the program, moderated by Richard Hoover, news director for the TV station, KREM.

Taking a slap at the Eisenhower power policy, Magnuson said "there has been a complete blackout of new power starts in our

area under the Republican administration with the exception of Ice Harbor" on the Snake River.

"We have plenty of new starts," Langlie replied. "The partnership program is working and for the first time in 10 years we're not wholly dependent on federal appropriations."

Langlie said the high federal dam proposed for Hells Canyon would cost the taxpayers of the country 400 million dollars and would generate 900,000 kilowatts of power.

He said the three low level dams proposed for the same area, to be constructed by the Idaho Power Co. would cost only 180 million dollars, yet would produce 1,400,000 kilowatts.

Magnuson took sharp issue with Langlie's figures.

"I'm not an engineer and I'm sure my opponent isn't either," Magnuson said when his turn before the microphone came. "He must depend on others. I have

the facts on Hells Canyon and the people ought to know.

"Estimates by the Army Engineers and the Bureau of Reclamation are that the high (federal) dam would produce 1,122,000 kilowatts, the low dams 305,000. The cost is estimated at 6.6 mills for power by the low dams, under 3 mills for the high dam."

Langlie said the high federal dam proposed for the same area, to be constructed by the Idaho Power Co. would cost only 180 million dollars, yet would produce 1,400,000 kilowatts.
