Nitrogen Perils Columbia Infants

PASCO (UPI)—A high concentration of nitrogen in irrigation blocks of the Columbia Basin project in Franklin County is a threat to the health of area babies, according to the district health officer.

Dr. Vernon Michael, Franklin County health officer, said the problem is caused by nitrogen fertilizer and has been increasing in some parts of the county.

Only one child has been affected by the problem, he said. The

infant, who lives on a farm near Eltopia, recovered from the illness, which Michael said resembles carbon monoxide poisoning. He said the maximum number of nitrates in well water which is safe for babies under six months of age is considered to be 10.

At the Bureau of Reclamation office at Eltopia, the number of nitrates per million during tests have jumped from 31 in October of 1958 to 52 in April of 1960.
