WILL SEE PHENOMENA

Northern Lights Will Be Clear, Says Prof. McAlister.

Showers of Shooting Stars Due This Winter, Also Other Heavenly Phenomena.

The aurora borealis, commonly called the northern lights, will be seen better during the coming winter by the people of Oregon than for the past eleven years, according to Edward H. McAlister, professor of astronomy and mechanics.

In ordinary times the northern lights are visible on an average of four or five times each winter in this latitude. Every eleven years the sun spots reach their maximum number, and, as a result, the northern lights play in the skies more frequently than in other times. Mr. McAlister says that the number and size of the sun spots seems to influence the frequency of appearance and the intensity of the display of the northern lights.

The aurora borealis will be seen near the northern horizon in shimmering streamers of white light, these streamers varying in length from a few miles to several hundred. In more northern countries the northern lights appear in different shades of yellow, green, red and blue. There is a possibility of the appearance of colored lights here, but it is not probable, as the intensity of the cold heightens the color effect. There

is no definite time of the night when these displays may occur, as they are very uncertain and erratic in their times of appearance. Scientists have observed, however, that they are more liable to appear in cold weather than in milder spells.

A phenomenon of a different character will appear in the heavens on the nights of November 15 and 24, in the form of showers of shooting stars. A display on a smaller scale is due on October 20. Shooting stars are visible a few at a time on almost any evening but during the periods just mentioned the earth goes through a large number of traveling meteors, causing large numbers of shooting stars to be visible at one time. The display which is due on November 15 may be seen in the early hours of the morning, and that of the 24th will be visible in the early evening.

STEADY JOBS ARE SCARCE

Ten Students Must Leave if Work is Not Secured.

Though steady jobs are somewhat fewer this year than formerly, the extra number of odd jobs more than makes up the deficiency, according to J. D. Foster, secretary of the university Y. M. C. A. Seventy-three permanent and odd jobs have been secured for the students during the first week following registration.

No one has had to go home as yet on account of low finances, although if work is not secured very soon, ten of the students say that they will have to leave before Christmas.

FROSH LITTLE YOUNGER SCHOLARSHIP IS POORER THAN TEN YEARS PAST

The popular assumption that freshmen enter University at a much earlier age than they did 10 years ago, is contradicted by a set of statistics prepared by Fred Heitzhausen '18. Heitzhausen found that the average age of men matriculating in 1905 was 20, that of 19.73 in 1915; women 19.44 in 1905 as compared to 19.74 in 1915.

Heitzhausen's statistics also show that the student of today is not as good as the one of ten years ago. Moreover, he finds that the women beat the men in scholarship.

According to his figures, in 1905 75 per cent of the students registering came from high school while in 1915 93 per cent of the women and 88 per cent of the men came from them. He gives as the reason the increased number of accredited high schools which has caused the discontinuation of many private institutions.

Heitzhausen's research shows that in 1905 49.2 per cent of those registering were women while in 1915 44.7 per cent were women. Though there has been a doubling of the number of courses since 1910, the women have mainly followed the same courses, German and education claiming the most.

With the men it has been different. In 1905 the most popular subjects were economics and zoology while in 1915 they were journalism and biology. The

20 OUT FOR SOCCER

Several Vacancies in Team to Be Filled.

Material Looks Promising; Coach Dymont's Hopes for Winning Team Are High.

Twenty men last night, answered the call for the first soccer turnout of the season which was held on the new field back of Kincaid.

Although only about one-half of the old men of last year's team reported, Coach Colin Dymont has several other men in view who have played the game before and he has hopes of developing

change is partly due to the removing of the school of engineering.

 For Good Pastries

several very good players out of these recruits.

The places held by Tuerck and Spellman, who are out for the football team, will have to be filled by new men as will also the place which Parson played for the last three years. Ralston is another man whose loss will be felt on the team this year.

Besides the half dozen old men and the five or six who have played the game before, the rest of the twenty who reported for practice know practically nothing about the game. But as several other men have expressed their intentions of turning out, Coach Dymont figures that the soccer squad will probably be swelled to 30 men and he has hopes of turning out a winning team.

A. R. Tiffany received a letter from A. B. Brown of O. A. C. which expressed the hope that soccer game could be

played between teams representing the two institutions sometimes later this fall. It is also hoped that a date can be arranged for with Multnomah club. This would mean a game here with both O. A. C. and Multnomah and a return game both at Corvallis and Portland with each team.

The soccer squad will hold a meeting about the first of the month for the purpose of electing a captain for the coming season.

When a man has so much money that it troubles him, he can easily find some woman who is only too glad to share his troubles.

A multiplying machine small enough to be mounted on the end of a lead pencil has been patented.
