

PRESIDENT HOPEFUL FOR MEDICAL SCHOOL

Legislature Expected to Give Aid Requested.

There is a fair probability of favorable action by the joint ways and means committee of the legislature in regard to an appropriation measure for the University of Oregon Medical school, passage of which will probably insure a further amount approximating \$300,000 from the General Education Board of New York City. This was the announcement of President Campbell yesterday on his return from the state capital, where with other faculty members and regents he appeared before the joint committee on behalf of the pending appropriation measures.

In addition to the president, Dr. R. B. Dillehunt, dean of the school of medicine, W. K. Newell, superintendent of property and A. C. Dixon, vice president of the board of regents appeared before the legislative committee and explained to the lawmakers the great needs of the medical school in the way of adequate facilities and the great opportunity of the state of Oregon to hold its prestige as the center of medical research for the northwest through the moral, scientific and financial support of the General Education Board, which depends to a large extent upon the willingness of the state to make proper appropriation for the school.

The question involved in the delay of the passage of the appropriation bills is whether the medical school should not be supported by a share of the educational appropriations contained in the millage bill passed last May; these appropriations are, according to President Campbell, insufficient to meet the needs of both the University and the medical school, the latter of which in the past has been supported by a separate appropriation of the legislature.

The Medical School program in the next year calls for an additional building the size of the one now occupied on Marquam Heights campus, and the addition of faculty and teaching equipment sufficient to handle approximately twice the number of students now admitted to this school, together with additional provision for research work by members of the staff. The classes are at present limited to sixty. At the beginning of last autumn more qualified students were turned away than could be admitted.

HODGE TO ADDRESS SCIENCE STUDENTS

Geologist Offers Engineer's Solution of Great Problem Now Facing Chinese.

China need not have a famine every year, says Professor E. T. Hodge, who has recently been added to the staff of the department of geology in the University. Professor Hodge will address students and faculty in the lecture room of Deady hall, Tuesday evening, on "China's Greatest Problem."

"That sounds like a title of a sermon," said Professor Hodge, "but I am not going to give a sermon. The solution of China's greatest problem is an engineer's solution, not a philanthropist's solution."

A permanent solution of the annual danger of famine in China can be worked out, according to Professor Hodge, whose particular branch of the department is applied geology. It is a solution that would attack the cause of the famine, not one that seeks to relieve after the famine is on.

Every year, thousands of China's people starve to death and millions of others are saved only through the philanthropy of the United States and other countries. This is preventable, maintains Professor Hodge. The entire life of the Chinese people, he says, is connected with a certain geological feature. This feature can be tamed and controlled so that famine in China may be cured permanently, not merely relieved annually.

This and many other such problems can be worked out by applied geology.

he believes. Geology is no longer considered a dry fossilized branch of science; it has a wide application. There are numerous geologists now actively engaged in out and out economic work, the professor continued. Many cities and large corporations, such as railroads, building syndicates, etc., employ consulting geologists. Professor Hodge was for a time consulting geologist for New York city.

The Tuesday evening meeting is under the auspices of the Science club, but is open to all. Professor Hodge says his talk is not necessarily for students of science, but is of a popular nature and is understandable by everyone. He will illustrate his solution of China's problem by drawings on the blackboard.

YALE SENDS BOOK HERE.

"The United States Forest Policy" is the title of a volume of non-technical nature which will be added to the campus library. The book is the gift of the Yale school of forestry and the Yale University Press in commemoration of the twentieth anniversary of the founding of the forestry school at Yale.

What They Say

Governor Olcott says the week beginning February 14th will be

PRUNE WEEK IN OREGON

The Rotary clubs, the Kiwanis clubs, the Cherrians and the Commercial clubs are strongly behind the movement to use more prunes and will support the Oregon Growers' Co-operative Association, the Eugene Fruit Growers' Association and all organizations representing the prune industry.

With about 22,000,000 pounds of Oregon prunes unsold, it certainly is the duty of every person in Oregon to help use them before a new crop. Look what California did with raisins. Aren't we just as much alive as they are in California?

What We Offer

Prune Bread and Prune Layer Cakes with Prune Icing READY NOW and all during Prune Week.

Specials for Prune Week

Beginning Feb. 14th, from

THE MODEL KITCHEN

Prune Loaf Cakes
Spiced Prune Cup Cakes
Prune Cookies

Prune Bread
Prune Layer Cakes with Prune Icing
Fancy large Stewed Prunes by the pint or quart.
Special Prices on all Prunes in the various sizes and grades.
