

CONCERT TRIO IS GIVEN PRAISE BY JOHN SIEFERT

Jane Thacher, Rex Underwood
Miss Teshner Please

By JOHN B. SIEFERT
On Tuesday evening in the Central Presbyterian church one of the most delightful concerts imaginable was given by Jane Thacher, pianist and Rex Underwood, violinist, assisted by Lora Teshner, cellist. The audience was wonderfully enthusiastic and their genuine and spontaneous applause, no doubt, assured the artists just how highly their work was appreciated. The lovely "Sonata in C Minor"—Grieg, with its tinges of quaint Norwegian melodies, especially in the Allegro Animato, was given an excellent reading by Mr. Underwood and Mrs. Thacher. Precision, excellent carrying of the melodic lines, attacks and a genuine intelligent reading throughout, made it a joy to hear.

Mrs. Thacher Brilliant
Mrs. Thacher followed with a group of four splendidly selected numbers. On this occasion, as well as on previous ones, she convinced her audience, without the shadow of a doubt, that she has brought her playing to a standard that is only reached by "a chosen few." She has power, brilliancy, accuracy, temperance and an ease of execution that make her rank high as a concert artist of splendid attainments.

The "Rigaudon" by Raff was played with such verve and brilliancy that the audience fain would have had a repetition of it, as indicated by their whole hearted and genuine applause. Rubinstein's very musical and melodious "Barcarolle" fairly ripped from the keyboard so charmingly was it played. "Reflections on the Waters" by Debussy, with its weird and intricate harmonies, likewise received a splendid interpretation, as did Carpenter's "American Polonaise." The artist added a short "Prelude" by Chopin as an encore.

Underwood is Artist
Mr. Underwood plays splendidly indeed, giving all his work the touch of a mature artist. He draws a beautiful tone, which he combines with a brilliant technique and, at all times, convinces his listeners of his true artistic worth. The "Chanson Meditation" by Cottenet, with its appealing melodies, met with instant approval on the part of his listeners. But it was in the "Gypsy Serenade" by Valdez, and the andante and allegro movements from Mendelssohn's "Concerto" that he rose to his greatest heights. The Mendelssohn concerto is one of the most beautiful and appealing of all violin concertos and its overtones were splendidly set forth by Mr. Underwood. A portion of the "Gypsy Serenade" was repeated and Dvorak's "Songs My Mother Taught Me" was added as an encore.

In the "Trio—Opus 27" by Schutt, Miss Lora Teshner assisted Mrs. Thacher and Mr. Underwood. This young artist is rapidly coming to the fore, by reason of her lovely tone and fine musicianship. The trio received an exceptionally fine reading and made one long to hear more of such excellent ensemble playing.

The proceeds of the recital are to be used in helping to furnish the club room for Mu Phi Epsilon and Phi Mu Alpha in the University music building.

STANDARD OIL EXPERT VISITS OREGON CAMPUS

Dr. Roy E. Dickerson, Chief Geologist
of Oriental Oil Company
Here to See Packard

Dr. Roy E. Dickerson, chief geologist of the Richmond Petroleum company of the Philippine Islands, a subsidiary of the Standard Oil company, was on the campus Tuesday from shortly after noon until about 11 o'clock renewing acquaintances with Dr. E. L. Packard, a former classmate of his at California, and Hubert Schenck, with whom he worked in the Philippine Islands. Dr. Dickerson is well known as a geologist, having written a number of papers on West coast geology.

Dr. Dickerson arrived in Seattle Monday on a business trip to California from the Orient.

While on the campus Dr. Dickerson spoke before geology majors on certain geological features of the Orient. While in Japan he was entertained at the University of Tokyo and met several noted Japanese geologists.

Evidence that the region between Sumatra, and Borneo was formerly land was cited by Dr. Dickerson in that tin deposits now covered by the ocean and that fresh water fish of a species identical with those of Sumatra fresh water streams are found at the heads of streams on a distant coast, indicating that the fish had retreated from the encroachment of salt water.

EPIDEMIC IS DISCUSSED AT MEETING OF FACULTY

Business Session is Shortest in History;
Suggestion That Hour Exams be
Postponed is Made up

"For the first time in the history of faculty meetings, the business was transacted in less than ten minutes," said Dean Dymont, speaking of the meeting which was held this afternoon in Guild Hall.

Following the short business meeting, Dean Dymont, head of the University Health Service, discussed the epidemic of colds and grippe that is now prevalent on the campus. He urged that the ban on social gatherings be strictly adhered to, and that the students be impressed with the importance of reporting promptly all cases of sickness.

"Students afflicted with the form of grippe which is now prevalent are confined to their beds for two or three days," said Dean Dymont, and this confinement is followed by a period of depression usually lasting for two to four days, during which time a student should not attend classes."

Dean Dymont suggested that since so many students were forced to be absent from classes, hour examinations should be postponed until attendance is again normal.

Professor Sam Bass Warner, of the Law school, presented a statement signed by 25 members of the faculty, requesting that an open forum, in the form of a "round table" discussion, be formed for the purpose of exchanging ideas on methods of instructing, and other matters connected with faculty work. This idea met with the approval of the members of the faculty, and H. D. Sheldon, dean of the School of Education, was appointed chairman of the committee to draw up plans for the organization. Other members of the committee will be appointed later by Dean Sheldon.

Professor Peter Corekatr asked the cooperation of the faculty in the drive that is being conducted for the relief of European students.

FROSH WILL DIVULGE NO SECRETS OF ANNUAL BUST

Yearlings Come Back With Claim of
Biggest and Best But Plans
Are Kept in Dark

Nearly every day finds a little group off in some corner of some building earnestly discussing the Frosh Glee which is to be held February 10 in the downtown armory. They are only the various committees which have been appointed to make the affair the biggest success of the season. Plans are progressing nicely, the chairman for the dance admits, and the list of patrons will be ready for announcement within the next two days.

The music, if the committee is to be believed, will be the best available on the campus. Decorations, which are to be unique, are to remain a secret, Fred Young, chairman of the decorations committee, says. There will be a program of 14 dances and two extras. The nature of the programs is also to be kept in the dark; but hints dropped by the wily committeemen suggest that they are to be clever.

While the affair is given by the frosh, it for everyone, from the most dignified senior to the most enthusiastic frosh, and a keen time is promised.

MEETING IS POSTPONED

The meeting of the executive committee, which was scheduled for last night, has been indefinitely postponed, according to Lyle Bartholomew, president of the associated students, and head of the committee. Dean Bovard, Jack Benefiel, Dean Walker, and others of the committee are on the sick list at present, and the meeting will not be held until they recover.

PHYSICS CLASS MAY CUT UNIVERSITY'S FUEL BILL

Pre-Engineers Experimenting
With Heat Values

Experiments which may mean the saving of considerable sums in the University heating plant are being conducted by the class in theoretical physics, according to Dr. A. E. Caswell, head of the pre-engineering department. The experiments have to do with the determination of the heat available from various fuels. The substance giving off the greatest amount of heat, expressed in British thermal units, at the least cost, can be determined by comparison.

The apparatus used is designed to ascertain conditions. Essentially it consists of a small heating stove encased in a double metal jacket, the outer jacket being in the form of a water tank completely enclosing the heater. By comparing the temperatures of the water before and after the burning of a definite weight of fuel the thermal units given off can be determined.

Fir Fuel is Tested
Body fir is the only fuel tested so far but, experiments are to be conducted on other fuels sold in Eugene, such as slab balm, oak, spruce and second growth fir. A section of body fir containing all the different parts of the tree such as bark, pitch and center revealed the fact that it is approximately three times as expensive to use gas as body fir, Dr. Caswell says. The efficiency of gas, however, lies in the fact that consumption can be stopped immediately and that there is little waste of the thermal units which are available.

In technical parlance one pound of body fir yields 25 British thermal units while the state law requires that one cubic foot shall contain 600 such units. In the laboratory, however, not more than 400 thermal units are obtained from a cubic foot of gas.

Fir Cheaper Than Slab Wood
Four cords of body fir will go about as far as five cords of slab wood, the fuel now used at the University heating plant, says W. K. Newell, superintendent of properties, who bases his statement on observations at the University plant.

EDUCATOR VISITS CAMPUS

Dr. Miller of Washington State, Normal
is Guest of Faculty

Dr. Irving Miller of the Bellingham State Normal School was on the campus Monday and Tuesday visiting instructors in the school of education and inspecting the University high school. On Tuesday he was entertained by the men of the faculty of the school of education at a luncheon at the Anchorage. Dr. Miller is the author of several articles and a well-known book on education, "The Psychology of Thinking."

WILL RETURN TO CHAUTAUQUA

Ruth Lane, a major in the school of business administration, will do advance work for the Ellison-White Chautauqua Bureau this spring for the third time. The work, she says, is interesting though rather difficult. It consists in arranging contracts, programs, and doing general business work ahead of the company. She will start in Arizona and cover the western states, ending probably in Montana.

MISS THOMSON RECOVERS

Miss Harriet Thomson, of the physical education department, who has been ill at her home since last Friday, with an attack of the "flu," was up and able to attend her classes yesterday. Corrective gym and personal hygiene classes on Friday and Monday were dismissed, owing to Miss Thomson's illness.

Y. W. MEMBERS TO TALK ABOUT ASSOCIATION WORK

Reports of Rummage Sale and State
Conference Will be Made
at Meeting Today

There will be a members' meeting of the Y. W. C. A. Thursday afternoon in the bungalow. Tea will be served at 4:45 and the business meeting will start at 5 o'clock. Grace Tigard, president of the association, will preside. The meeting will be held primarily for the purpose of letting the general membership know what the main activities of the Y. W. are. Special music has been provided.

A report will be made of the returns from the rummage sale and plans for using the money will be presented by the bungalow committee.

There will also be short reports from the finance and membership committees, and a report of the progress of Bible study classes. Glyde Schuebel who was recently sent as undergraduate representative to a conference in McMinnville of representatives from all student associations in Oregon will make a report. She will also have news of the national convention to be held in the future. There will be a discussion of the possibility of sending a delegate from the campus Y. W. C. A. to this national convention in Arkansas.

RESOLUTION MADE

(Continued from page one)

flecting on his institution.

Given Final Authority
"Third—That final authority on all questions of larger policy in regard to athletic relations rests with the administrative authorities of the several institutions. In view of this fact, action on questions of policy by the Northwest and Pacific Coast conferences is subject to review by the executives of the institutions represented in these conferences."

President Campbell stated that college work must be considered first and that he would consider it advisable for athletes to take lighter courses if it were necessary for them to work outside during athletic seasons.

The whole proposition of jobs for athletes is contained in the affidavits which the players are required to sign before they become eligible, he said. In these statements information as to the kind of a job, the amount of time put in and the pay received must be sworn to. He brought out the fact that there should be no distinction made as to whether or not the man worked in his department or in some other department for money.

The problem will be made a great deal more simple by the provision that rumors of violations be immediately transmitted to the executive of the other schools, was the opinion voiced at the meeting in Portland.

Make Reservations—For that trip to Portland this week-end now at the Y Hut. See Mrs. Donnelly.—Adv.

What Do You Want Most?

When you are hungry what do you want most? That's simple, you say, its something to eat. That is just the point we have in mind. It is the food you eat that is important and that is just the thing that has brought us the large business we have. We specialize in good cooking and that is what you pay for.

Monarch Cafeteria

956 Willamette Street

Photography Is an Art

Many of our customers wonder at the results we are able to produce. They say that our photos are more than mere pictures and wonder why we are different from the average studio.

The truth is that our studio is not much different from the average. We use cameras, just like the others. Our portraits are different, because of the personal element; retouch, correct exposure and printing. Then we have wonderful success in posing our subjects.

All in all it is our ability to produce better photo-portraits, that gives us a claim on your patronage.
