

OREGON SELECTED FOR NEXT DEBATE SESSION

C. D. Thorpe Returns From California Conference

The University of Oregon was selected as the next meeting place for the Pacific Coast Forensic League, which was organized by a group of public speaking instructors and forensic managers who held a conference at the University of California March 24 and 25. Prof. C. D. Thorpe, debate coach and instructor in the public speaking department at the University, was the Oregon representative.

The conference was called for the purpose of discussing ways and means of promoting interest in public speaking, and if possible to put debate on a better footing among the colleges and universities of the Pacific coast. One of the most important and interesting things about the conference, according to Mr. Thorpe, was the spirit of friendliness and cooperation which the institutions showed towards doing away with rivalry in debate. The idea of working more for the general interest in forensic work, rather than for the championship, was discussed. A new plan which will be voted upon by the institutions individually, was brought up regarding the system to be used at the inter-collegiate debates. The plan is to do away with the three-judge system, and have the audience act as the judge. The University of California has used this plan and found it successful.

The conference is to supervise all debates carried on by members of the league, and at its meeting each year will conduct an extemporaneous speaking contest. It will also conduct an oratorical contest. Professor Thorpe praised highly the hospitality given the representatives by the University of California at the conference.

The eleven institutions which are charter members of the league and which were represented at the conference are, University of California, University of Washington, University of Oregon, University of Southern California, Oregon Agricultural college, Washington State college, Stanford university, Reed college, Whitman college, University of Idaho and University of British Columbia, Canada.

GAMES WITH IDAHO TO OPEN BASEBALL SEASON

the squad as soon as he gets a line on them. The only pre-season practice games scheduled are with Willamette here April 13 and 14.

CAMPUS DULL DURING SPRING HOLIDAY PERIOD

(Continued from page one.)

Non-journalistic students showed sudden interest in the art of printing, and all week hung around the linotype operators at the University press, who were setting up the sheet.

About the only thing that did happen in Eugene during the week was—rain. Oregon is a different Oregon than it was last term. The trees are leafing, and the shrubbery blossoming and most of it happened during spring vacation. But the men on the grounds tell the admiring frosh to wait till the rhododendrons bloom.

CARDS MUST BE IN TODAY

Late Filing Fee of One Dollar Will Be Charged After Three P. M.

Some students on the campus are confused as to the time for filing of their pink and yellow cards in the Registrar's office. The cards must be in before 3 o'clock today.

Tomorrow a fine of one dollar will be imposed for late registration and after tomorrow 25 cents a day will be charged. These cards must be in so that the business office can check them over in preparation for the payment of laboratory fees which can be paid from April 23 to May 7. It is reported from Mr. Spencer's office that some students have been waiting to turn in their study cards at the time that they pay lab fees. This is wrong. Turn in study cards at once.

Grace Edgington Is Dean Fox's Successor

When Dean Fox-DeCou leaves the old familiar office in the Ad building taking the thumb tacks out of the signs on the door, it is with memories of many Oregon girls who called for a long or short chat, of friendships and duties and discouragements and good times. When Grace Edgington enters, stopping to tack a new sign on the familiar door, it is with mixed feeling of responsibility and adventure—a feeling of finding an overwhelmingly large pair of shoes to step into and only the audience knowing that they will be well filled.

In the years that Dean Fox has lived in the little office many girls have come to regard her as their personal friend. She has been in the University since 1916 with the exception of a year spent in France in war service with the Y. W. C. A.

Grace Edgington is a graduate of the University of Oregon, has been affiliated with both Washington and California in the teaching of short story writing and journalism. She is the national organizer of Theta Sigma Phi, national women's journalism fraternity, and has been acting in the capacity of alumni secretary during the past year. Old Oregon, the official alumni magazine, has been edited by Miss Edgington.

ton at the same time, and has grown in spirit and size during her regime.

The small office will be the scene of originating big plans, and all those who know the new dean will see that no unfortunate ones are missing out on the pleasure. And all the old friends of Dean Fox see that she does not altogether forget Oregon in new interests.

KILPATRICK IN PRINT

"The Proceedings of the National University Extension Association," just published, contains an article by Earl Kilpatrick, director of the extension division of the University of Oregon, on "Publicity Methods of University Correspondence Schools." The yearly national meeting of extension division directors will be held at St. Louis from April 19 to 23. The book just out contains an account of last year's proceedings and of the last national meeting.

VOLTA EXPLAINING HIS

BATTERY TO NAPOLEON

How Electrical Engineering began

IT IS not enough to experiment and to observe in scientific research. There must also be interpretation. Take the cases of Galvani and Volta.

One day in 1786 Galvani touched with his metal instruments the nerves of a frog's amputated hind legs. The legs twitched in a very life-like way. Even when the frog's legs were hung from an iron railing by copper hooks, the phenomenon persisted. Galvani knew that he was dealing with electricity but concluded that the frog's legs had in some way generated the current.

Then came Volta, a contemporary, who said in effect: "Your interpretation is wrong. Two different metals in contact with a moist nerve set up currents of electricity. I will prove it without the aid of frog's legs."

Volta piled disks of different metals one on top of another and

separated the disks with moist pieces of cloth. Thus he generated a steady current. This was the "Voltaic pile"—the first battery, the first generator of electricity.

Both Galvani and Volta were careful experimenters, but Volta's correct interpretation of effects gave us electrical engineering.

Napoleon was the outstanding figure in the days of Galvani and Volta. He too possessed an active interest in science but only as an aid to Napoleon. He little imagined on examining Volta's crude battery that its effect on later civilization would be fully as profound as that of his own dynamic personality.

The effects of the work of Galvani and Volta may be traced through a hundred years of electrical development even to the latest discoveries made in the Research Laboratories of the General Electric Company.
