

JOURNALISM MEET TO BOOST FRIENDLINESS

Ideal of News Work Discussed By Leaders of School

Opening the second annual meeting of the school of journalism, Prof. George Turnbull explained that the custom of such a meeting at the beginning of the year was instituted by Dean Allen and the object was to create a spirit of loyalty and friendliness among the students in the department.

Dean Dymont addressed the assembly in his courtesy connection with the school. "I regard journalism as an occupation that is surely but slowly becoming a profession," said the dean. "The man who attempts to stabilize public opinion is the journalist. Curious that he should be the last to become a professional."

Journalists function to carry the image of understanding to the public. If the image is not accurate, the duty is unfulfilled, the dean went on, stressing especially the value and the necessity of accuracy.

Art Rudd in the capacity of Emerald editor, gave as his opinion that the daily was far ahead of organizations of previous years due, partly to the "standbys" on the staff and partly to the very adequate equipment of the new journalism building. The fraternal and democratic spirit of the school, he said, welcomes freshmen. The reward of the work is not found only in an "O" but in the experience gained and in the prestige. The record of Oregon journalists has been good in the field of state newspapers, he pointed out.

Freda Goodrich, new editor of the Oregonian spoke for just a moment on the positions which the freshmen in the school will be expected to fill in the years to come.

Velma Farnham, in behalf of Theta Sigma Phi urged all the freshman girls of the school to make use of the club rooms provided by the group.

The meeting, which lasted an hour, was addressed also by Prof. Casey, Leo Munly, Robert C. Hall, and John Piper, each of whom presented a different angle of the work of the department, or the various publications. All of the leaders laid especial stress on the fraternal and democratic spirit in the school.

Prof. Thacher introduced a new note into the general discussion, by pointing out that creative writing is related to journalism in a very vital way.

COMFORTS HOUSEHOLD ENJOYED BY WOMEN

doctors to have a misplaced vertebrae fixed and two others have sprained ankles.

The practice of the football men showed the coaches that the men on the squad, at least were still fighting. About fifteen linemen were out a half an hour early so they might get the benefit of some extra coaching in defensive scrimmage.

A new man was tried out in an end position tonight. McCullison is a former University of Washington man, weighs about 170 pounds and has had considerable football experience both in school and with service teams while serving in the army. Moorehead is another backfield man who has reported.

Another practice is scheduled for 9:30 this morning. One man said, "We

might just as well come here at 7:30 for there isn't any use going out with all these training restrictions on and I can't set around and talk with out wanting to smoke so bad it hurts—so I just go to bed."

Let us hope this new flood of culture hasn't stamped out entirely the fighting spirit that makes one proud one is an Oregon student.

ANCIENT WHALE BONES SENT FROM NEWPORT

Skeleton Pre-Historic Monster Found Last Summer by Dr. Packard Shipped in Plaster

Additional parts of the skeleton of a pre-historic whale have been received at the geology department. Dr. E. L. Packard of that department discovered the fossil last year near Newport and began the task of excavating the framework of the huge mammal.

After finding the fossil, Dr. Packard dug out only certain parts of the framework among which was the famous flapper on exhibition at the laboratory. He has assembled practically all parts of the cetacean with the exception of some sections of the tail.

Francis Linkhter, senior of the geology department, assisted Dr. Packard in the preparations of the fossil this summer at Newport. The fossil was dug out on the sides and then plastered to prevent any breakage in shipment. It was then packed and shipped to the University. Tackle was required to lower the skeleton into the freight-room of the department. The latest section to be received weighs approximately 500 pounds. Dr. Packard is removing the coating of plaster and preparing the skeleton for exhibition.

SOCCER TO BE REVIVED IF MEN SHOW INTEREST

Rudolph Fahl Well Qualified to Serve in Capacity of Coach; Freshmen Can Play on Team

If enough interest is shown in soccer the physical education department has arranged to have Rudolph Fahl coach the team. Rudolph Fahl, the new man

on the P. E. staff has had six years in coaching soccer and is willing to devote his time to developing a team, provided enough men turn out for practice. Several students have showed their interest in forming a team. Since the sport is not recognized freshmen may play on the team. A schedule of games could be arranged with O. A. C. and other colleges on the coast.

Last year soccer died a quick death at Oregon and this year physical education department is trying to arouse some interest in the sport. All men who are interested in trying out for the team should report to Rudolph Fahl at the men's gymnasium some time Saturday morning.

INFIRMARY WANTS OLD MAGAZINES AND BOOKS

The infirmary has sent out a call for any old magazines of the summer months. They have thrown away all

their old reading matter and have only two or three books. If you have any magazines that you have finished or any old books, it would be greatly appreciated if you would send them directly to the infirmary, as it is very lonesome without anything to do.

RACHAEL CHEZEM WILL NOT RETURN TO UNIVERSITY

Rachael Chezem, who would have been a junior this year in the school of journalism, will not be back on the

campus this year. She is teaching school near Portland. While at the University Miss Chezem was actively engaged in Emerald work, holding the

position of exchange editor. She hopes to return next year.

JOSEPH HENRY 1797-1878

Born at Albany, N. Y., where he became teacher of mathematics and physics in Albany Academy. Leading American physicist of his time. First director of the Smithsonian Institution.

When Henry rang the bell

If any bell was ever heard around the world, Joseph Henry rang it in his famous experiment at the Albany Academy. The amazing development of the electrical industry traces back to this schoolmaster's coil of insulated wire and his electro-magnet that lifted a ton of iron.

Four years later when Morse used Henry's electro-magnet to invent the telegraph, Henry congratulated him warmly and unselfishly.

The principle of Henry's coil of wire is utilized by the General Electric Company in motors and generators that light cities, drive railroad trains, do away with household drudgery and perform the work of millions of men.

The work that was begun by pioneers like Joseph Henry is being carried on by the scientists in the Research Laboratories of the General Electric Company. They are constantly searching for fundamental principles in order that electricity may be of greater service to mankind.
