

# Camera Clicks Show Spring's Arrival on Oregon Campus

## Grades Up in Spring

When spring comes to the Oregon campus and the sun glints on the rippling water of the mill race, University students play. But if GPA proves anything they also study.

Between 1931 and 1935, when 1.00 meant "C" and "F" was a scholastic debit, the records show a noticeable ascent in spring grades. The average student during those four years received 1.38, fall term; 1.45, winter term; and 1.48, spring term.

However, figures sometimes lie, or at best express a half-truth. The increase in GPA spring term is attributed to three factors (1) a general decline in study narrowing the difference between extremely high and low grades, (2) a more philanthropic grading psychology in professors, (3) an integration of work and play by the student.

## They Seek Rest

In the center of the page is Mill Race Sun-Bather No. 1, the first to gamble against Oregon's rapidly changing spring weather. But no picture page would be big enough to carry the manner in which other students find relaxation.

Tennis is, perhaps, the most popular outdoor sport, but on the other hand (right) Oregon males find it more "sport" to doze in the sun.

The mill race is undoubtedly the favorite mecca of all relaxers. At bottom, left, some coeds asks, "Gotta match," of passing canoeists. Canoeing offers real exercise some coeds find, right. Before many more days many swimmers will do their studying in water, if at all.
