His bullet rings a bell...

30 miles away!

Zing! . . . and the damage is done.

A bullet . . . intended for game . . . pierces an exposed telephone cable.

Instantly, hundreds of wires are open to the ruinous effects of moisture.

Instantly, too, nitrogen gas . . . stored in the cable under pressure . . . begins its slow escape, keeping dangerous moisture out. And, as the gas pressure falls, a small contact closes and an alarm is sounded in a Bell Telephone testroom many miles away.

Through mathematical plotting the break is readily located and, within minutes, an emergency crew is on its way. Repairs are frequently made before telephone service is interrupted.

This alarm system is but one of countless expedients all of which reflect the initiative and ingenuity of Bell System personnel . . . men who find highly interesting and rewarding careers in an ever growing business.
