Mexican Figurines Now in Art School

A collection of more than 30 Mexican pottery figurines, some more than 2000 years old, have been received recently, according to Dr. L. S. Cressman, head of the anthropology department.

Dr. Phillip Drucker, of the Smithsonian institute, excavated figurines on a joint expedition of the institute and the National Geographic society in Vera Cruz.

The objects will be used in classroom instruction in archeology and anthropology, in tracing the development and relationships of the various horizons or periods of culture, Dr. Cressman said. They were believed to have been used for household images and in religious ceremonies, and they are useful now for checking time periods and localities.
