CAMPUS BUILDING PROGRAM for the next five to six years is shown on the above map. Indicated are proposed additions and new buildings, present buildings which will be removed, as well as other existing buildings. Among proposed new construction are

another men's dormitory along with John Straub, an armory, a men's pool, a new administration structure, an addition to architecture across to its east wing, and a new journalism building. Numbers at the left refer to the buildings located on the map.

By Abbott Paine
 Emerald Reporter

Additions to the University of Oregon campus totaling \$6,085,000 are planned during the next five to six years, with a \$600,000 Journalism building first on the agenda, according to figures released by J. O. Lindstrom, University business manager.

"Just looking around the campus and seeing the old journalism building, McClure hall, men's pool, and Emerald hall, is sufficient to convince people of our need for these new buildings," said I. I. Wright, head of the physical plant.

Six new buildings for the University at present have top priority for state funds and are expected to be approved when the state legislature meets July 1, Lindstrom said. Construction of the new journalism building probably will begin shortly and will be completed in about one year, according to Wright.

Awaiting approval by the state legislature are funds to build the journalism building, architecture school expansion, school of dentistry building in Portland, swimming

pool addition to the men's physical education building, an armory replacing the present ROTC building and drill shed, and a new administration building replacing Emerald hall.

A new \$1,650,000 men's dormitory, housing about 350 men and located east of John Straub hall, is planned sometime between 1955 and 1957. Also planned then are a new women's physical education building and additions to Condon and Chapman halls.

The journalism building will be constructed on the site now occupied by McClure hall. Together with the present journalism building to be remodeled, it will house journalism classrooms, faculty offices, Emerald editorial and advertising offices and the University Press printing and mimeographing facilities.

University Press equipment will be housed in the basement of the new building and the Multigraph section will occupy several rooms of the basement level of the present journalism building. Emerald offices, teletype room, copyediting and advertising classrooms will be housed on the third floor.

Preliminary architect's plans are completed for the

addition to the architecture and art school adjoining the old heating plant and the present architecture building, Wright said. The new wing will include studios, classrooms, and faculty office space.

Construction of a new men's pool housed in an addition to the men's physical education building on the area now occupied by the ROTC drill shed will begin as soon as funds are available and plans are ready, according to Wright. Costing approximately \$340,000, it will include a 42' x 75' pool and seating for approximately 1,000 spectators. The pool will be adjacent to the present showers and locker room.

Federal, state and athletic department funds will be combined to finance an \$800,000 armory, replacing the present ROTC building and drill shed. No plans have been formulated as yet for this structure.

A new \$660,000 administration building is tentatively planned for the corner of 11th and Kincaid, however a site next to Johnson hall, is still being considered, Lindstrom said. The structure will house administrative offices now in Emerald hall, which is a temporary building moved from Camp Adair after World War II.
