

Ersted Awards Honor Koplin, Stromberg

Two members of the University faculty were honored June 12 at the University's 89th annual commencement exercises with the announcement of the Ersted Awards for Distinguished Teaching.

The awards, highest given to members of the teaching faculty, went to Harry Thomas Koplin, professor of economics, and to Karl Robert Stromberg, associate professor of mathematics.

This is the second year that the two of the \$1,000 awards have been given. Prior to 1965, a single Ersted Award had been made annually since 1957.

The awards are made available

through a trust fund from the late A. J. Ersted of Atherton, Calif., who expressed the wish that the money be used to encourage and reward distinguished teaching and that the awards be made to relatively young members of the faculty who have demonstrated exceptional ability to induce students to reason rather than to memorize.

In Ersted's words, the awards should "stimulate an interest in inspired teaching in the classroom and in conference."

The Ersted Fund, with the awards made from accumulated interest, is administered by the University Development Fund.

Koplin and Stromberg were selected by a committee from nominations made by faculty, students, and alumni.

Koplin came to the University in 1950 from Cornell University, where he had been a teaching fellow and instructor. He is a graduate of Oberlin College and received his doctorate from Cornell in 1952.

From 1959 to 1961, Koplin was director of the University's Honors College and assistant dean of the College of Liberal Arts. He spent the 1962-63 academic

year in England, on sabbatical leave.

Stromberg is a graduate of the University where he also received his master's degree. He received his doctoral degree in 1958 from the University of Washington.

Before coming to the University in 1960, he taught at the University of Washington; at Yale

University, where he was a research associate under an Office of Naval Research contract; and at the University of Chicago, where he was a research lecturer.

Stromberg is a member of a number of professional societies including the American Mathematical Society, the Mathematical Association of America, Sigma Xi, and Pi Mu Epsilon.

Africa Problems To Be Discussed

The problem areas facing the emerging nations of Africa will be the focus of a special summer seminar at the University.

Problems of Modern Africa is the title of the seminar set for today through Aug. 12.

The seminar is designed to meet the needs of African students pursuing graduate degrees in this country as well as furnish background material to interested American students.

The interdisciplinary study will focus on Africa's physical limitations, economic growth and development, and the role of science and technology in development. There will also be a consideration of political stability, international relations and organizations, educational and welfare services, the minority problem, urbanization and migration, and the prospects for African culture, "integrity," and vitality.

A series of field trips to selected American institutions such as circuit courts, school boards, and various small entrepreneurs will be conducted to acquaint participants with American methods in the problem areas. There will also be a weekly film series dealing with Africa.
