

**The only thing you'll get
for wearing this iron-on
is a new duck.**

**Vote Mallard Drake
University Duck May 3 & 4**

1. For best results use permanent press materials of 50% cotton, 50% polyester. All 100% cotton materials do not hold color after several washings.

2. To protect your ironing board and items to be ironed from staining, place a cover of plain paper over the board. Notebook or bond typing paper is good. Do not use porous paper, such as paper towels or tissue.

3. Cut out the iron-on decal along dotted lines and place the design **FACE DOWN** on the area you wish to decorate. Pin pattern securely to shirt along the top, bottom and sides so it can't slide as you iron.

4. Slip your shirt over the end of the ironing board so that the side you wish to print is directly over the protective paper. Place another piece of protective paper over the design to protect the iron — *do not use heavy brown paper.*

5. Set your iron on "cotton" setting (350 degrees) and allow to heat to proper temperature. Be sure to use a dry iron. When iron is hot, press along the design with firm even pressure for *at least one minute*. Be sure to cover the entire design area. Let shirt cool *at least one minute* **BEFORE REMOVING PAPER.**

Note on laundering:
Wash and dry with other permanent press clothes using proper settings and temperatures. Do not use chlorine bleach on any permanent press. Colors will soften with the first washing to a slightly faded look.
