

New department gives support for students

The University is on the brink of implementing major changes for gerontology students and the Gerontology Association (an ASUO program) is becoming more of an asset because the new department can lend greater support to gerontology students, says Michael Ego, director of the association.

The State Board of Higher Education recently approved a baccalaureate and certificate program in gerontology. The proposal awaits final approval from the Educational Coordinating Council, scheduled to meet this fall.

The association helps students become involved with other interested peers and professional organizations by conducting programs and services with the community.

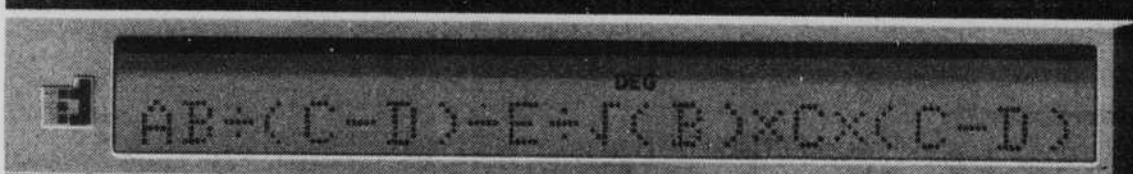

Ego adds gerontology is "a profession to help old people live their later years in dignity and positive self esteem."

Students interested in the association are invited to drop by the office in Suite 3, EMU, or call 686-3749.

THE FIRST CALCULATOR SMART ENOUGH TO SPEAK YOUR LANGUAGE.

The 5100 speaks to chemistry majors.

The 5100 speaks to mathematics majors.

The 5100 speaks to engineering majors.

The 5100 speaks to physics majors.

stored data, even when the calculator is off. Corrections, insertions, or deletions? Make them quickly and precisely when and where you want, at any point in the calculation.

The 5100 makes the job of assimilating, studying, and problem-solving a lot easier for you. You skip past the drudgery of wasted time. You enjoy the convenience of a classroom tool that operates as fast as a professor can talk. And the 1,000-hour battery life could very well take you all the way through college.

Most importantly, the Sharp 5100 is smart enough to talk to you directly, and on your own terms.

And in your case, that's a major advantage.

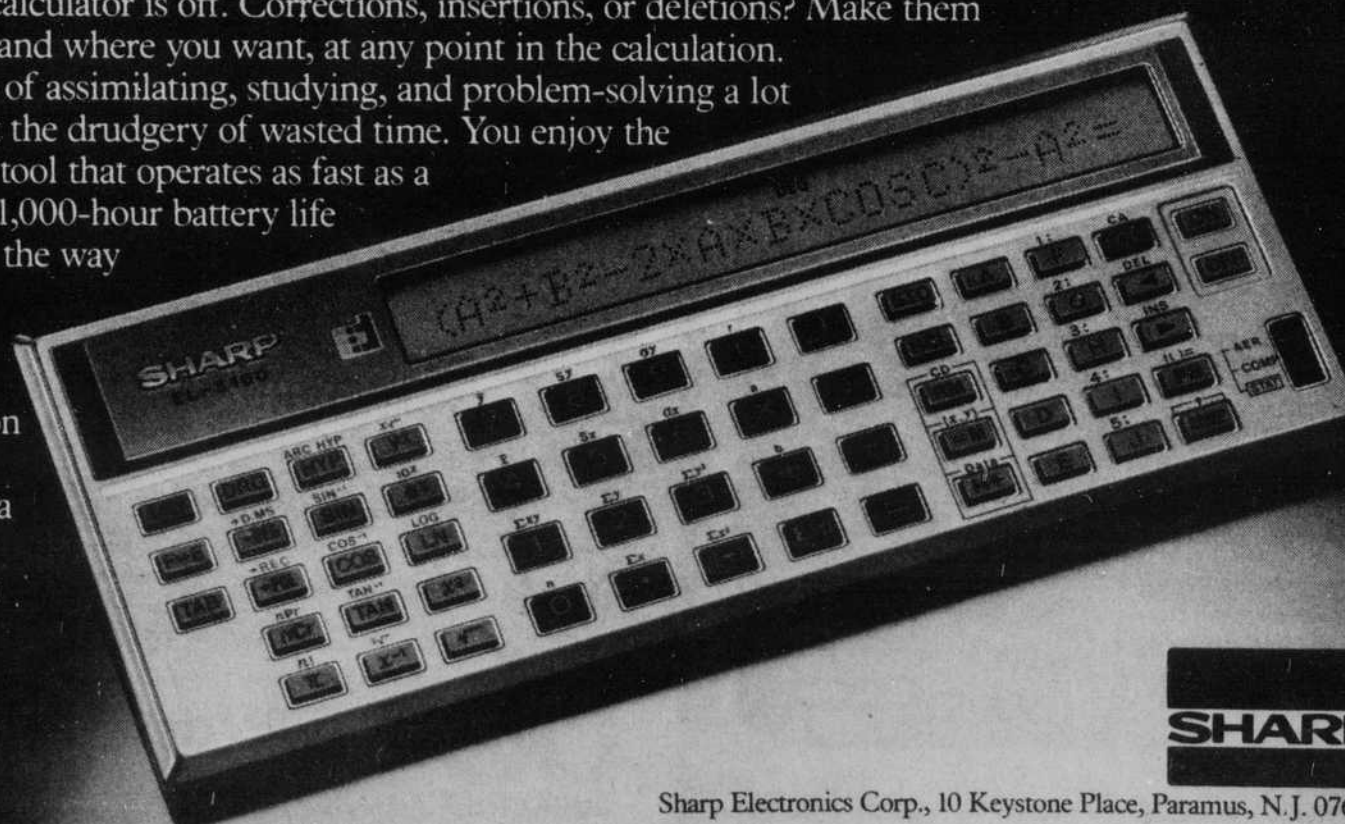

Ask for a demonstration today at your college store.

THE SHARP 5100

The amazing new Sharp 5100 is quite possibly the most important thing that's happened to calculators since calculators happened to math.

Here, at last, is a scientific calculator with direct formula entry, in algebraic terms. Even the most complex formulas can be entered and displayed just as they are written. Furthermore, your original entries can be visually edited, corrected, or tested. Which means there's no need for machine-language encoding or decoding. Result: you save valuable time, and avoid the frustrating errors that might have slipped by you before.

And the incredible 5100 offers you a 24-character dot-matrix display that rolls right or left to accommodate one or more formulas totaling up to 80 steps. Store the formulas; when you need any segment, instant playback is at your fingertips. Incidentally, Sharp's own Safe Guard™ feature protects all entered formulas and
