

# We've just quickened the pace.

*The Macintosh IIci is the newest and most powerful member of the Macintosh family.*

Introducing the new Apple® Macintosh® IIci. With a 68030, 25MHz microprocessor, it's powerful—and fast.

In fact, the Macintosh IIci offers increased performance of up to 45% over all other Macintosh computers.

So now you can handle larger spreadsheets, bigger databases, and complex graphics—all more quickly and efficiently than ever before.

What's more, built-in video support lets you add one of a variety of Apple monitors to display up to 256 colors or

shades of gray simultaneously on the screen—without adding a video card to the system, or occupying one of its three Nubus™ slots.

And because the Macintosh IIci has the same dimensions and modular design as the Macintosh IIcx, you'll save desk space. Turn it up on its end, stack it under a monitor, or on top of a shelf.

Which puts this very versatile tool a step ahead. Take a step in our direction, and we'll show you how.

## Hurry in.
