

## MEASURES

Continued from Page 1

sion for that. If the girl comes from a reported abusive situation, the doctor does not have to notify either parent, but will notify the state. What we are hoping is that this will be a good thing and get the girl out of that home life and a bad situation."

"They do not want to confront the main issue, and the main issue is that parents do have a right to know. So they're picking on trivial points," Atteberry said. "The basic concept has always been that for a major decision for a minor, parents should be involved."

Harbert said arguing parent rights misses the important issues.

"The strategy of the proponents of this measure is to say 'parental rights' she said. 'They're not dealing with the reality of the situation. Teenagers don't want to tell their parents. The kids coming from good stable relationships with their parents are the ones just as likely to not tell them."

Harbert said even without the parent notification law, 55 percent to 65 percent of pregnant teens already tell at least one parent of a planned abortion.

"Even pro-choice people support parent notification of abortion, and it's just a matter of getting out and letting people know what the consequences are," she said. "This is not a matter of family communication; it just forces our young women to try self-induced abortions or to leave the state to have abortions. If this happens, our young women will die."

Atteberry said she disagrees with the idea that Measure 10 is the first step in restricting all abortions.

"That's not at all what this measure is about," she said. "It is no secret that the pro-lifers want to stop abortions, but it is important to look at each law individually. This measure gets back to family involvement and

## KRMA

Continued from Page 1

"Nothing is set in stone," Anderson said.

January added that the current by-laws of the group are only in place as a means of getting the station organized and started.

After the meeting, January and the heads of many student groups held a smaller meeting to discuss the board of directors question further. Several student leaders still harbored concern about equal representation in the way KRMA will be run.

"I think it's good we came together and discussed the representation of students on KRMA," said Eddie Beanes, director of MEChA. "It's only fair that there is student representation."

Beanes, Ward, January and other student leaders will meet Wednesday night at 7:30 to discuss a possible board structure. One possibility is a 17-member board with representation by students of color, women of color, students with disabilities, gays and lesbians, and members of the greek system.

Despite some confusion over whether the board structure had yet been approved, and delays in getting the station on the air, January said he is optimistic the station will be on the air by winter.

in the long run is helpful to the teenager.

"You can legislate communication in the family," Atteberry said. "It can be done very easily. The parent can be notified and it will create a chance to look at the problems. The best thing for the girl and the family is that they face the problem and begin to work on the underlying problems. One parent being notified is not a radical or extreme idea."

Harbert disagrees. "It's very misleading to say this helps family communication," she said. "Communication starts in the formative years; it's not something that can be legislated. We feel the most important step is for parents to teach their own morality on sexuality. We think preventative measures is the best way to stop abortions."

"Ideally, parents should be involved in this decision, but not all families are ideal," Harbert said. "Not all teens feel they can go to their parents."

## DORMS

drive instead of walk off campus.

"I think there is an increased risk (of drinking and driving), although right now I see a lot of big groups walking to parties," Mills said.

Many RAs contend that when residents do drink in the dorms, they seem to be doing so qui-

etly.

"I think that people are just staying in their rooms," Henshaw said.

"My dorm is really good about staying quietly behind closed doors," Mills said. "It's good on paper, but in actuality it's really hard to enforce."

"I know they're drinking, and I try to stop as much of it as I can, but they're not stupid. They know ways around it."

## Move 10 years ahead of the class.

The new HP 48SX and a free 'library card' can get you there.

With over 2100 built-in functions, our new HP 48SX Scientific Expandable calculator takes a quantum leap into the 21st century. Buy an HP 48SX between August 15 and October 15, 1990, and HP will send you a free HP Solve Equation Library card (a \$99.95 retail value).

The plug-in application card alone contains more than 300 science and engineering equations, as well as the periodic table, a constants' library, and a multi-equation solver. It's like having a stack of reference books right at your fingertips.

The HP 48SX calculator is so advanced, it will change the way you solve problems forever. It integrates graphics with calculus, lets you enter equations the way you write them, and does automatic unit management.

Check your campus bookstore or HP retailer for HP's range of calculators and special back-to-school offers. Then check out the calculators that are years ahead of their class.

There is a better way.
