

UNIVERSITY

Woman student sexually harassed

A female University student was sexually harassed by an unknown male suspect last Thursday evening, according to Eugene police.

Police Beat

The student was walking near Kincaid Street and 11th Avenue toward her car when the suspect grabbed her from behind and started fondling her. The student broke away from the suspect and ran to the Northwest Christian College faculty lounge, according to the police report.

Finding no one at the lounge to report the incident to, the student waited there before trying to return to her car.

She saw the suspect again in the parking lot, where he was standing with his pants around his ankles and masturbating, according to police.

The student returned to the NCC lounge and again waited. She went back to her car, where she saw the suspect again.

She entered her car, and the

suspect tapped on her hood and laid across the vehicle. She started the car and pulled forward, at which time the suspect backed away.

Police describe the subject as a white male, aged 21 to 26 years. He stands about 5 feet 9 inches, has blond hair, and was last seen wearing a white and blue pullover sweater, tan slacks, brown loafers and carrying a gray backpack.

In other crimes reported to Eugene police and the Office of Public Safety:

- A theft from a dorm room in Caswell Hall was reported to EPD Sept. 28. Stolen were various items, including a \$1,000 Cartier watch. Police have no suspects.

- An OPS officer found a smashed motorscooter near the south side of PLC. The scooter had been dropped from either the eighth or ninth floor of the building, according to the police log. Total damage was estimated at \$500.

- The theft of a car stereo was reported to EPD from the parking lot at 1700 E. 15th Ave. on Oct. 8. The Sherwood model stereo was valued at \$300.

There were no signs of forced entry, and police have no suspects.

- A vacuum cleaner from Spiller Hall was reported stolen to OPS on Oct. 10. The loss was valued at \$89. Police have no suspects.

- A University student was cited for prohibited noise disturbance by EPD officers on Oct. 10, according to the police log.

The student was hosting a party at 967 Patterson St., according to the log. Residents of the University Inn complained of noise several times, causing an EPD cruiser to be dispatched on three occasions, according to police.

EWEB

Continued from Page 1

EWEB entered into an agreement with Bonneville in which they gave up control of Trojan in exchange for a lower rate for the output, Berggren said.

Bonneville shouldered all financial responsibilities for the plant, Berggren said, but EWEB still has "a good faith agreement" to not take any action that could possibly harm the power plant. Therefore, EWEB is staying silent on Measure 4 so they can't possibly violate that agreement, Berggren said.

through weatherizing customers' homes and businesses. While 55 to 60 percent of EWEB customers now have some sort of energy-saving insulation, Berggren said the target is 75 percent by 1996.

"Our first effort is to use energy wisely, so we have to go out and use our resources to build new plants," he said.

But Berggren admitted conservation can only go so far. Eventually, new power plants will have to be built.

"The '90s are a time of balance," he said. "The power utilities and environmentalists

'The board was polarized, and I tried to keep (the controversy) out of the organization so we wouldn't get drawn into inappropriate arenas.'

— Randy Berggren

"Closing Trojan wouldn't cripple us," he said. "People can expect a rate increase. (Measure 4) would just make it worse."

A rate increase in the future is a near-certainty, Berggren said. Spiralling costs for raw power will force Pacific Northwest utilities to have an annual adjustment just to keep up with inflation.

"We're trying to manage our costs so we don't incur more of a rate increase," Berggren said. "If we hold it to just the inflation cost, we're doing pretty good."

For the future, Berggren said EWEB is looking to increase its efficiency.

"Conservation is the plan," he said. "EWEB has been a leader in that for a long time. We are also trying to improve our distribution and the efficiency of our plants, and find the best way to get the power from the plant to the customer."

One of the ways EWEB is looking to conserve energy is

will have to recognize the worth of each other's positions and find a middle ground."

Finding new sources of power is difficult. Nuclear power is an option, Berggren said, but at the moment, not an attractive one.

"The social appetite for nuclear power is low," he said. "[Nuclear] is out there, and it's a viable resource, but it remains to be seen if it's socially viable."

But that's the future. For the present, Berggren wants to establish a good working relationship with the new board.

"The new board is easy to work with," he said. "They're very demanding and diverse, but they look for common ground. They want to make good decisions."

"We don't have all the answers," Berggren added. "We see all the issues, and that's where a good organization-board relationship will be so helpful."

You can say many things about Macintosh.

But "I can't afford it" is no longer one of them.

You can talk about how simple the Apple® Macintosh® computer is to use. Or how it can think the way you think. Or how compatible it is with other computers.

But think again when the word "expensive" comes to mind. Because it's just not true any more.

Introducing the Macintosh Classic® computer. It's the most affordable Macintosh, yet it has all the capabilities you need to handle basic applications, such as word processing and spreadsheet

analysis. The Classic is a completely integrated Macintosh system. Its monitor, keyboard, mouse and system software are all included, as are extras you might not expect—such as built-in networking and the Apple SuperDrive™ disk drive, which lets the Classic read from and write to MS-DOS, OS/2, and ProDOS® files.

Stop in today. We'll show you how it's possible for nearly anyone to afford a Macintosh. Comfortably.
