PIONEER Big Screens

IMPACT.

It can be the crashing sound of a sonic boom or the overwhelming images projected in a movie theater. Pioneer big-screen projection TVs are on the cutting edge of video and audio quality for today's home theaters — like yours. Any thoughts of holding out until High Definition TV (HDTV) reaches stores later in the decade will vanish once you see Pioneer's latest 40- 45- or 50-inch monitor/receivers in action. Two key criteria for top quality rear projection sets are brightness and resolution. When a TV picture gets larger, it tends to dim, making the brightness level (measured in foot lamberts) critical for optimum viewing under different light conditions. The higher the rating, the better. Resolution determines the amount of detail you will see on a single scanning line (measured in horizontal and vertical lines). Again, the higher the number, the finer the picture you will see. For example, the new 1991 Pioneer 40-inch projection monitor receiver has a brightness rating of 550 foot lamberts and horizontal resolution of 720 lines. Resolution jumps to 750 lines with the 45-inch SD-P454-K which has a 460 foot-lambert brightness level. The top-of-the-line SD-P5047-Q — with an impressive 50-inch screen — has a brightness rating of 400 foot lamberts and super-sharp horizontal resolution of 800 lines. These specifications equal a picture that comes close to the goal of true-to-life video in your home, making the investment of a Pioneer projection TV pay off in years of state-of-the-art viewing.
