# Insights and oddities

The Grade

While sitting in class, do you carefully scrutinize what a professor says? Or do you simply take what is given as fact, file it to memory and be on your way?

Are you too afraid to cause a minor amount of trouble, question a bit of what is offered as holy scripture, and possibly sacrifice one-tenth of a point of the grade?

If we were to simply sit in class, eat up the information offered and regurgitate it back into the curriculum via schoolwork, are we not merely processors of information giving the desired output to a controlled input? I now offer a definition: "Computer n. 1. An electronic machine that stores, processes and prints information derived from coded data in accordance with a predetermined program."

Have some faith in yourself! Question what you are told to learn. Make some changes on our Earth. For it is not computers that make the world turn, but living, thinking human beings. Act in accordance with your correct species.
