

WHICH IS MORE VALUABLE?

AN UNBORN
EAGLE

AN UNBORN
CHILD

If you chose the unborn child, sorry you're wrong -- at least according to the law of the land, *U.S. Code, Title 16, Section 668*, the eagle takes precedence. A person who kills, damages, transports a bald eagle, its egg, or nest is subject to a fine of up to \$5,000.00 or imprisonment for up to one year or both (first offense). Whereas, not only is there no penalty for aborting an unborn child, doctors get paid exorbitant fees for destroying the child in the womb.

Does something seem wrong to you? It is! If you are troubled by this injustice help us save the unborn babies and educate the public to the harsh realities of abortion. If you or someone you know is facing a crisis pregnancy, we'd like to help. We can refer you for specific needs. All human life is sacred! There are many alternatives to abortion!

See page 5 for individuals and organizations who will assist you.

Answers to Abortion I.Q. Quiz

1) D; 2) D; 3) C; 4) B; 5) C; 6) D; 7) B; 8) D; 9) B; 10) C; 11) B; 12) A; 13) C (one in five); 14) D

The Declaration of Independence begins with:

"We hold these truths to be self evident, that all men are created equal, that they are endowed by their Creator with certain inalienable Rights, among these are Life, Liberty, and the pursuit of Happiness..."

Michael the Archangel, Inc. (503) 581-BABY (2229)
1725 Capitol NE, Salem, OR 97303

We are a non profit, non denominational organization dedicated to protecting life from the moment of conception to natural death. We provide education about pro family values, chastity education, abortion, infanticide, and euthanasia.

We provide loving care for mom and her baby. FREE PREGNANCY TESTS, referrals for medical assistance, shelter, adoption, clergy, and post-abortion counseling—all means of support to carry the BABY to term.

Enclosed my donation of \$ _____ to Michael the Archangel, Inc.

☐ \$100 ☐ \$50 ☐ \$25 ☐ Other

☐ I would like free literature to pass out.

☐ I would like to be involved with Michael the Archangel.

☐ I have a specific talent I want to share; it is _____

☐ I will commit to pray for the moms and babies.

☐ I would like to be part of a prayer chain.

Mr./Mrs./Ms. _____

Zip _____

Abortion Techniques Described

Suction-Aspiration: The method of abortion most commonly used for early pregnancies. The abortionist inserts a hollow plastic tube into the dilated uterus. The tube is connected to a powerful suction apparatus. The suction tears the baby's body into pieces.

Dilatation and curettage (D and C): Similar to the suction procedure except the abortionist inserts a tiny hoe-like instrument into the uterus. With this, the abortionist cuts the baby into pieces and scrapes him/her out into a basin. Bleeding is usually profuse.

Dilatation and evacuation (D and E): Used after 12 weeks. A pliers-like instrument is needed because the baby's bones are calcified, as is the skull. The abortionist inserts the instrument into the uterus, seizes a leg or other part of the body and, with a twisting motion, tears it from the baby's body. The spine must be snapped and the skull crushed in order to remove them from the womb.

Salt poisoning (saline injection): This is used after 16 weeks. A long needle is inserted through the mother's abdomen into the baby's sac. Some fluid is removed and a strong salt solution is injected. The solution is swallowed and "breathed" and slowly poisons the baby. He/she kicks and jerks violently as he/she is literally being burned alive.

Hysterotomy or Caesarean Section: Used mainly in the last three months of pregnancy, the womb is entered by surgery through the wall of the abdomen. The tiny baby is removed and allowed to die by neglect or direct act.

Prostaglandin chemical abortion: This form of abortion uses chemicals, developed by the Upjohn Pharmaceutical Co., which cause the uterus to contract intensely, pushing out the developing baby. In one article, one of the complications listed with this method was "live birth." In fact, the two most "dreaded" complications for an abortionist are a dead mother or a live baby.

Dilatation and Extraction (D and X) Late Term Abortions

(The authenticity of the following information has been confirmed in an article in the American Medical Association's Newsletter, *American Medical News*, in the July 5, 1993 edition).

At a September 13-14, 1992 meeting of the National Abortion Federation, a trade association of abortion providers, an Ohio abortionist, Dr. Martin Haskell, described this new technique he has perfected. Unlike the D & E procedure whereby the preborn child is dismembered inside the mother's womb, with the D & X method the preborn baby is alive until the end of the procedure when the child is killed by suctioning the brain tissue through a hole at the base of the skull while the baby's head is still inside the uterus. Then the intact aborted child, minus brain content, is removed from the womb.

According to the paper presented by Dr. Haskell the procedure takes three days and begins with "dilation (and) MORE DILATION." The cervix is initially dilated to 9-11 mm. with mechanical dilators, in order to accommodate the placement of five to seven synthetic laminaria, Dilapan hydroscopic dilators, which remain in place overnight.

The following morning the Dilapan are removed and replaced with a second insertion of 15 to 25 dilators, again left overnight. The Dilapan process may cause severe cramping.

On the third day, after removing the dilators, the abortionist ruptures the membranes, if this has not already happened, and drains the amniotic fluid. The abortionist places an ultrasound transducer on the mother's abdomen and locates the child's legs and feet.

The abortionist then uses a large forceps to grasp one of the baby's legs. He pulls firmly, forcing the child into a feet-down position. He continues pulling until the baby's leg is drawn into the birth canal.

Next, using his hands instead of forceps, the abortionist delivers the baby's body in a manner similar to a breech birth. First, the child's other leg is delivered, followed by the torso, shoulders, and arms. The baby's head "usually" remains inside the uterus.

The abortionist then performs the last step which Dr. Haskell calls "fetal skull decompression." Using blunt-tipped surgical scissors in a closed position, he pierces the child's head at the base of the skull. He then forces the scissors open to enlarge the skull opening.

Removing the scissors, the abortionist inserts a suction catheter into the wound and vacuums out the child's brain tissue (in Dr. Haskell's words, "evacuates the skull contents") causing the baby's death. With the skull emptied of brains, it collapses and he then "applies traction to the (dead) fetus removing it completely from the patient."

Dr. Haskell has performed over 700 of these abortions on preborn babies as old as 26 weeks. Dr. Haskell refers to another abortionist, Dr. James McMahon of McMahon Med. Center and Eve Surgical Centers in Los Angeles and Tarzana, CA, who not only also uses this technique but sometimes uses it to abort preborn children up to 32 weeks "or more."

Barbara Radford, Executive Director of the National Abortion Federation said of this late-term abortion technique, in a 6/18/93 letter to NAF members, "Don't apologize: this is a legal abortion procedure."
