

Specialized rider Todd Tanner says,
"The slide mechanism easily adjusts on
the fly with cold, stiff, muddy fingers."

The Headlock

"The visor is made of
a high-density polymer.
Totally adjustable. And
protects against flying
debris and harmful rays—
ranked around SPF 100.
But if you want a tan,
it snaps off, too."

"Even a sick mind is a terrible
thing to waste. So take special note
of the Headlock's extended noggin
protection along the back of your,
you know, cerebral cortex."

"The Headlock System
comfortably secures the
Headlock to your melon.
Head and Helmet become
one. Whoa." Thanks, Todd.

You've probably already guessed how our new Headlock™
helmet works. For those who didn't catch on as fast, it
works by clamping itself to your head, thus the name

(hed'lok'), Sherlock. It doesn't bobble. It doesn't toss. So
you're free to keep your mind on that gnarly six-foot drop
that you haven't made in the last ten tries. Get to it, sicko.
