prescription drug Rezulin. Rezulin, known generically as troglitazone, was used for the treatment of type II diabetes. It was removed from the market in March 2000, after several people taking the medication experienced liver damage or liver failure.

According to Pfizer spokesman Bob Fauteux, there were 90 cases of liver failure recorded among 1.9 million people taking the drug.

"Those are all possible connections," but they're not probable, he

said. "There is absolutely no scientific evidence."

Fauteux added that Rezulin was withdrawn when the FDA approved two comparable drugs — Avandia and Actose — which offer similar benefits to Rezulin with less risk.

The hearing is free and will be open to the public. However, it is a formal proceeding and no one will be permitted to enter or leave the room once the hearing has begun.
