WARREN

An active campaign will be carried on to eradicate the peach leaf curl, that pest which has completely taken all the peach crop. The Oregon agriculture college has taken active interest in the matter and is asking the assistance of all county agents and fruit inspectors to cooperate with them in getting away with this pest. The time to spray is NOW, not when the buds begin to show. The mixture used is compounded as follows: 6-6-50 or six pounds of bluestone, six pounds of lime and 50 gallons of water. Dissolve the bluestone in half the quantity of water, slack the lime and add the balance of water, pour together and stir while pouring. Use at once. If you wish to keep this preparation for a time add one ounce of sugar for every pound of bluestone used. This will clean the trees and keep the leaf curl away. Every test that has been made has proven a success. There

are many peach trees in Columbia county, but the leaf curl has prevented any fruit being produced.
