The Mist hereby enters a plea to its advertisers to whip up a little oil, their ad changes. This paper commences to go to press Wednesday and it would greatly appreciate it if copy for ad changes could be in the office not later than Tuesday evening. Having to make ad changes on the last day only adds a little more burden to an already overburdened work day, and if the advertiser could only make up his mind that his advertising copy could be prepared as easily on Monday as Wednesday or Thursday it would simplify matters all around.

**Post Contact Will Run Down Battery**

The starting motor takes the current from the storage battery through brushes. It sometimes happens that these brushes for various reasons are not making proper contact, and this means more or less failure of the system. When trouble arises in this system these brushes should be carefully examined. Again, one of the cells of the storage battery run down before the others, which are therefore called upon to do more work than they are able to handle. Also a grain of grit or foreign matter may get between the contact points of the switch and may make a world of trouble before it is discovered and dislodged.
