A Banking System That Has Helped Revolutionize the Farming Business

The operations of the Federal Reserve System are especially favorable to the farmer. His borrowings to cover cost of fertilizing, planting, harvesting and carrying his crop can be rediscounted by this bank with the Federal Reserve Bank, and an abundant supply of credit at a moderate rate thus secured.

This bank realizes to the full the vital importance of the farmers' work, and is genuinely desirous of extending to the farmers of this community the benefits resulting from its membership in the Federal Reserve System.
