In 1891 there were 397 acres in hops in Polk county, and the yield was 2,334 bales. This years the acreage is 630 acres and the yield 3,339 bales. This increase in acreage is nearly 100 per cent., while the increase in yield is only about 50 per cent. Two reasons are given for this: First, the small yield of many of the new yards, and the shortness of the crop this year. In some places this shortsgamounts to fully 50 per cent. less than last year. A dispatch reciting the troubles experienced by American merchants on the Gilbert Islands was shown to Secretary Foster the other day. The United States commercial agent in the Islands has made no such representations to the Department of State. The Secretary says that early in the present year the department received a communication from King Tebu Reino of the Gilbert Islands praying that the United States establish a protectorate over them. The department did not act upon the application for the reason that it was the established policy of the United States to decline to extend its protection by such means. Certain aspects of the case resembled the Samoan controversy, and, although the Department of State felt obliged to decline the request for a protectorate, it may be assumed that all legitimate American interests in the islands will be fully protected.

world's Fair, and also cause on Aestucky members of the National Commission to resign as a protest.

One of the most elaborate State mape that will be exhibited at the World's Fair, and one which has been executed entirely by hand, will be that of the State of Washington. The map was designed and is being made by W. J. Woods, the mining engineer of the Northern Pacific land department, who is engaged upon the map at the present time. It will require altogether six months' steady work to complete it. This map is fifteen long, twelve feet deep, and is drawn on the heaviest and finest grade of white muslin mounted drawing paper, the cost of the paper in this one map being \$65. The map will be done in colors, so that the visitors to the fair who have only a short time to spare examining maps may ree at a glance the various topographical and other special features of that State. But to the one who can spare the time to give it a more extended and careful examination it will show to the minu'est detail all mining, agricultural, timber and fruit lands, as well as all land grants, church and school sections, military and Indian reservations; also every rail and wagon road and trail in the State of Washington will be shown. It will show the waterway of the navigable streams, and every river and creek will be laid down with the utmost fidelity to nature. In fact, there has been nothing overlooked to make this one the most valuable reference maps ever made of the State. The principal hills and mountains of the State will be indicated, and by means of different colors the various classes of timber, cereal and plant lands will be indicated.

Leaves Used for Paper.

Leaves of trees were used for writing purposes very early by the Egyptians, and probably by the Greeks. The Hindoos continued the use of this material until within a few centuries. Even at the present time books of leaves are not uncommon in the south of India and the island of Caylon. The leaves of same

Asiatic trees, from their size and smoot ness, are admirably adapted for book if we may judge from the name "lee being still applied to the paper of book we should imagine these leaves to ha been formerly the principal material use.—New York World,
