The Modern Aesop.

A dog, who was accustomed to over eat, held a piece of meat in his mouth as he crossed a placid stream by means of a plank. Looking in, he saw what he took to be another dog carrying another piece of meat. Snapping greedily to get this as well, he let go the meat that he had and lost it in the stream. As a result his indigestion felt much better all the rest of the day.—Life.

Only One Real Road.

There is only one real road to human prosperity, and it is the same for a nation as for an individual. That is the honest road of hard work under free institutions, and when they tried to teach people that they could be made rich by some short cut, they were doing that which was thoroughly dishonest.—Walter Long.

BOYS ON A STOCK EXCHANGE

Amsterdam Youths' Privilege for Discovery of Gunpowder Plot—Enjoyed Nearly 300 Years.

Of the many quaint and curious customs, traditions and privileges prevailing in Holland none is more extraordinary than a certain privilege that has been enjoyed by the boys of Amsterdam for nearly 300 years, the Boston Evening Transcript remarks.

At a fixed time each summer these boys gather by the hundreds in the great square called the Dam, situated in the center of the city. Each boy has a drum slung over his shoulder.

Facing this square is the stock exchange, and on the occasion in question just as soon as the day's business is over as many of the boys as possible crowd into the building. They proceed to the floor of the exchange, where, pursuant to this old custom, they are permitted to march about, singing and beating their drums.

The origin of this custom, it is said, is as follows:

One afternoon of the year 1622 a crowd of boys playing in the Dam lost a ball in the canal that in those days skirted one side of the square. One of the lads, while climbing in among the piles on which the building stood, found instead of his ball a boat moored in a dark corner and loaded with boxes of gunpowder. This showed clearly enough what was afterward ascertained with certainty, the intention of the Spanish conspirators to blow up the stock exchange while it was crowded, as it was every day, with the leading citizens of the city.

The boy who stumbled upon the gunpowder at once hurried to the town authorities with his news. The boatload of explosives was quietly sunk in the canal and the Spanish plot thus frustrated.

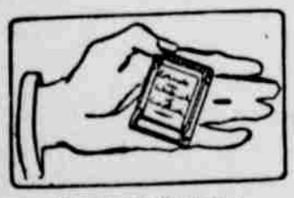
When the burgesses asked the boy what reward he desired for the service he had rendered the town he replied that so long as there was a stock exchange in Amsterdam the boys of the town would like to be permitted to make the floor of the exchange their playground during a certain part of the year. The request was granted; and so the custom survives.

PROMPTER IS ALWAYS HANDY

Little Device Held in Hand Enables One to Deliver Long Speech Without Trouble.

Do you want to make a speech and have your audience think that you're so all-fired smart that you can quote figures and facts without looking at any notes? There's more ways than one. Outside of learning your speech "by heart," the best device is the invention of a man in Australia. It consists simply of a small metal case, no larger than the metal matchbox used.

A roller is at either end of the case and one of the rollers is folding with



Ever-Ready Prompter.

paper on which appear the notes of speech. The box is held in the palm of the hand and people standing right beside the orator would never suspect its presence. The paper is unrolled either by pressure of the thumb or by the manipulation of a milled screw on one of the rollers.

Her Flowers Melted.

Little Minnie, who had been spending the afternoon at a neighbor's, was presented with a bouquet of beautiful flowers. Upon her arrival at home her mother told her to put them in a vase filled with water and they would keep fresh for several days. A few days later Minnie appeared with the wilted flowers in her hand and said: "I dess I'll frow 'em away now, mamma, 'cause they is all melted."

Hotel Would Do.

Small Willie was out walking with his mother one afternoon, when she stopped to give a nickel to a beggar. "Why don't he go home, mamma?" asked Willie. "The poor man has no home," she replied. "Then," continued the little fellow, "why don't he go to a hotel?"

A Brick Problem.

If a brick balances with three-quarters of a brick and three-quarters of a pound—then how much does a brick weigh?

Answer:—Three pounds.

Low Down Dog.

Small Edna was out walking with her mother when a dog with unusually short legs passed them. "Mamma," said Edna, "did you ever see such a low down dog as that?"

IN BOX WITH A GOAT

REMAINS OF BABY AND ANIMAL DUMPED IN SAME COFFIN.

Infant Dies at a City Hospital, and Mother Claims That She Was Not Notified of Its Demise—Undertaker Makes Discovery.

St. Louis, Mo.—The mutilated body of their four-months-old son, Joseph, wrapped in a rag with a dead Angora goat, was recovered the other day by Mr. and Mrs. Stanislaus Maggos, 2008 Cass avenue. The parents at the time were on their way to the grave in potter's field, following the child's death at the City hospital.

Only the front of the skull, the arms and the chest of the infant were contained in the box, in which they and the goat were to have been buried together. The rest of the child's body had been cut away in an autopsy held in the morgue at the City hospital. The lower part of the body had been kept at the hospital for anatomical study.

Crazed with horror and grief at the fate of her only child, the distracted mother, Rosa, 30 years old, told the tale of her infant son's fate.

Being in poor financial circumstances, and with a husband out of work, the woman has been forced, although paralyzed in her left arm and leg, to work for her living.

Unable to take her four-months-old baby to work with her, the mother has been leaving it at the Niedringhaus Memorial Mission, where she paid a few cents a day to have it cared for while she was at work.

She left the baby there the other morning, she says, and went to work. When she returned at five o'clock the matron in charge told her the baby was sick and had been sent to the City hospital about an hour before.

Mrs. Maggos then walked to the City hospital to see her baby, she says. There she was told she could see the little one the next morning. The following morning she went, saw the child for a few minutes, and then went to her work.

At 12:35 that afternoon the baby died, according to the City hospital records. The tracer was notified of the death and instructions given to notify the child's parents, at 2008 North Twentieth street. Investigation shows there is no such number, and the baby's parents were not notified.

"I called up the City hospital," Mrs. Maggos said through an interpreter, and was told the baby's condition was the same.

"I called again the next day, and was told Joseph had died the day before at noon, and that I could have the body any time.

"When the undertaker went to the City hospital he was told the baby had been buried. He telephoned the Potter's Field, and was told the body was then on its way to the grave.

"The undertaker ordered the body held, he says, and went out and got it. When he brought the box supposed to contain the child's remains, he found the parts previously named and the goat wrapped together."

GIRL IS TREED BY BEARS

Minnesota Girl While Seeking a Lost Cow Has Thrilling Encounter.

Kinney, Minn.—While hunting for a lost cow in the woods adjacent to her father's homestead, seven miles north of this town, Mary McInnes, fifteen years old, encountered a black bear with two well-grown cubs. She was almost upon the animals before she saw them.

Screaming, the girl scrambled over fallen logs and dead brush, the enraged bears coming after her. Coming to a small tree, she grasped the lower boughs and drew herself up until out of immediate danger. The bear clung around the tree and made several attempts to climb it, but its efforts were failures, owing to the small girth of the trunk, which prevented the brute from getting a solid grip. The weather was very cold, and as the evening wore on it became almost impossible for the girl to retain her hold on the boughs through cramps in her arms and the stiffness from cold.

When darkness came on the parents and elder brother became alarmed and started out with lanterns to find the girl, calling loudly as they proceeded through the woods. Miss McInnes heard the calls and endeavored to answer them, but at first found it impossible to make even the slightest sound because of the cold and nervousness. As the searchers drew nearer, however, she was heard calling faintly. The bears must have been frightened by the lantern light, as nothing was seen of them by the rescuing party.

Miss McInnes collapsed when taken from her perilous position. She had been in the tree six hours.

Ducks Clear Hotel of Flies.

Chicago.—The champion fly catchers of Chicago are said to be a flock of yellow ducks at a local hotel. According to the manager, they keep the restaurant free from flies every day. The ducks are kept in a fountain in the main entrance and each morning are carried to the dining room, where the chase for flies begins.

Costly Ham.

Chicago.—Frank Moriarty stole a ham worth $1.92. Patrolman Friends followed the trail of grease and arrested Frank. The ham cost Moriarty $5.

Wins Eating Contest.

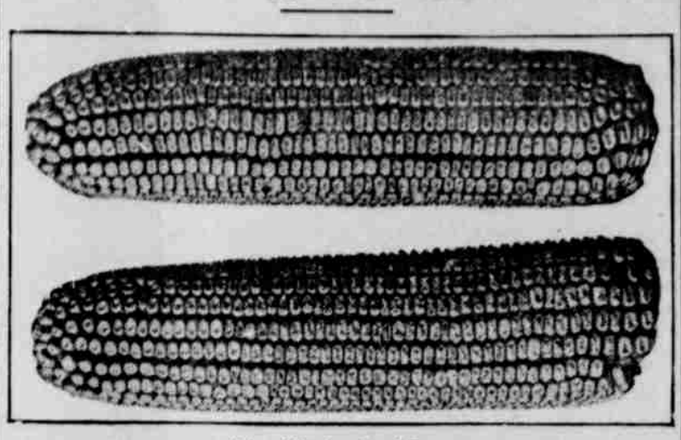
New York.—In an eating contest at College Point Philip Lommell devoured seven and one-half pounds of steak, eleven rolls, ten ears of corn and ten cups of coffee.

Seeks One-Legged Man.

Philadelphia.—Dr. Oberholtzer, director of the historical pageant which is to be held here, is trying to find a one-legged descendant of Peter Stuyvesant to appear for the Dutch governor.

EXCELLENT RULES GIVEN FOR IMPROVING SWEET CORN SEED

Farmers Who are Most Successful Plant Early, Use Plenty of Manure and High Grade Commercial Fertilizer and Keep Plants Clean From Weeds and Thoroughly Cultivated.



Prize Winning Seed Ears.

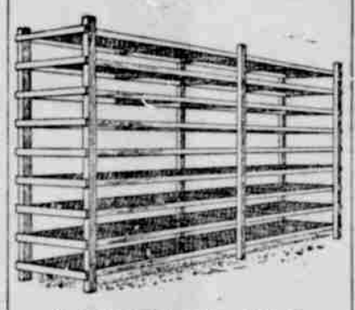
(By CHARLES D. WOODS.)

General observation shows beyond any question that the farmers who are most successful with sweet corn, are those who employ the following rules: Plant early, use plenty of manure and high grade commercial fertilizer, keep the corn clean from weeds and well cultivated, do not plant too thick, use seed well adjusted to the locality in which it is to be grown.

The following detailed plan is drawn up for the guidance of farmers who desire to improve their sweet corn seed.

First Year's Work.

In the first year's work towards an improved strain of seed, only the field selections of plants from which ears are later to be used for planting can be made. These selections should be made of the growing plants in the field. In choosing plants to be saved for seed look out for the following points in the order named. In going over the field one should provide himself with some strips of cheap bright colored cloth, about 2 feet long and 2 to 3 inches wide. When a stalk is selected to be saved for seed one of these cloths should be tied around it just below the tassel. This marks the



Rack for Drying Sweet Corn.

This may be made rat and mouse proof by covering top, bottom and sides with wire screen.

plant so that it will be saved when the rest of the crop is cut.

1. Whatever other good points a stalk may have do not save it for seed unless it is conspicuously earlier than the others around it. This is most important.

2. Take only stocky plants with broad leaves bearing good sized, and so far as can be judged at this stage, well-shaped ears.

3. Take only stalks which show the characters which are typical for the variety you are working with. Avoid freaks.

The field in which selections are made must obviously be cut by hand, so that the marked plants may be left standing to mature their ears. Save about twice as many plants in the field as you expect to want ears for planting the breeding plot of next year.

When the selected plants are well-matured (stalks and husks dead and drying) they should be harvested, and the ears should be husked and cared for in the following manner. In the winter, after the ears from these plants are well dried on the racks, the best of them should be picked out for shelling and planting. Special attention should be paid to the following points.

1. Take only ears having small well packed grains in straight rows, and with the grains set firmly on the cob. Select no ears with fewer than 14 rows (better 16.)

2. Aim to select ears of medium size, nearly cylindrical in shape, and with butt and tip fairly well covered with grain.

3. Test the germination of each ear by taking 25 kernels from the middle of the ear. Reject all ears from which more than two kernels out of the 25 fail to germinate within ten days.

Having selected the ears for planting shell them, keeping the grain from each ear by itself in a paper bag. Do not save the kernels from the butt and tip, say for about ¾ inch from each end. Each ear selected, should be given a number. This number may be written on a slip of paper and put in the bag with the shelled seed.

Second's Year's Work.

The corn should be planted each year in two plots, one the breeding plot and the other the propagation plot. In planting the corn for seed use the best corn land you have, and manure and fertilize it well. Plant the rows 3 feet apart and the hills 18 inches apart in the row. Plant 4 kernels to the hill and thin to leave the two best stalks standing in the hill. Give the plots the best cultivation you can.

In the breeding plot should be planted the selected ears. Each ear should be planted in one row by itself. (This is called the ear-to-row system.) The rows should be given the number borne by the ear planted in it. Careful observation should be made throughout the season. Each row should be harvested separately its yield determined and the ears from it kept separate from the ears from all other rows.

The seed from the best rows, those showing greatest earliness and highest yield of good quality corn and stover, should be used to plant the propagation plot the third year. Reject all nubbins and poor ears.

In the propagation plot of this year plant the good ears from the previous year selection which were not used in the breeding plot. It is desirable though not absolutely necessary in the propagation plot to detassel every alternate. Detasselling is done by pulling out and throwing away the tassel (spindle) as soon as it appears. The ears from the detasseled rows are to be regarded as the best seed, and those from the rows where the tassels were not removed as second best. The two classes should be harvested and cured separately. Seed from the detasseled rows will probably be found to yield better than that from the others.

Just as in the previous year the best individual plants from both the breeding and propagation plots should be marked with clothes and saved separately to furnish seed for the following year's ear-to-row breeding plot.

Third and Succeeding Year's Work.

Plant on the ear-to-row system, the individual ears selected the previous year in the breeding plot. In the propagation plot plant seed from the best rows of the preceding year. In the propagation plot detassel every alternate row. The seed from the detasseled row will be the best seed From your individual plant selections take the seed for the following year's breeding plot.

Strong Cholera Serum.

Farmers are now storing their product for future use. This is easily possible, and until the scourge, so disastrous last year, is stamped out, no chances should be taken. If last year a large supply of hog cholera serum had been available, it is reasonable to suppose that comparatively little damage would have been done. Government as well as private plants were wholly inadequate to meet the demand of 1911, and as a consequence hog cholera losses were unprecedented. Scientists are convinced that properly stored hog cholera serum will keep for three or four years. This being true, there ought to be little complaint hereafter should cholera break out.

Rotation of Crops.

If we use but one crop on the land and cultivate it clean all the time the soil will quickly be robbed of its humus; therefore we must follow a proper rotation in order to supply humus, without which we can do little. Some men have never discovered this fact, however.

COSTLY LESSON IN HAY BALING

Farmer Who Had Fifty Acres in Grass Cut It Too Soon—Better to Feed to Animals.

(By R. A. OLMSTEAD.)

One of my neighbors learned a lesson in hay baling this year. He had never been a hay farmer until last year when he put in a crop of timothy and top mixed. He cut a pretty fair crop in July but he was so eager to get at the new work that he cut it a little too soon. He has about 50 acres in grass and concluded to bale the crop and sell it. I suggested that he ought to stack it and let it stand at least six weeks for cutting before baling it, but the hay looked pretty dry and he concluded to haul it direct from the cocks to the baler. It looked very nice as it came out of the baler and our neighbor stacked it all up three tiers deep.

Of course the bulk of the hay spoiled and it will be a total loss. I never think of baling timothy hay on my place until it has gone through a sweat and is practically cured, therefore, I stopped selling baled hay several years ago because I discovered that it paid much better to feed the hay to make beef and obtain manure to put back on the land to raise more hay. This season I cut an average of three tons of timothy on 40 acres and it was as fine hay as I ever saw. Some of the neighbors who are hay sellers got only on an average of two tons and they do not seem to understand where the trouble is. Originally their land was as good as mine but they have yet to learn that they cannot keep on selling off their hay crops without putting anything back on the land.

The Calf Pasture.

Calves ought to have a separate pasture, and one in good clean order. They cannot thrive on short or soiled grass, nor hold their own in pastures with older animals, as the latter will monopolize them or take the choice portions.

Fast Color Eyelets. Write for Catalog. W. L. DOUGLAS, Brockton, Mass.

Original Amen Corner.

The origin of the name "Amen corner" is interesting and throws a pleasant light on English Catholicity of the days before the apostasy of Henry VIII. Each year on the feast of Corpus Christi the faithful went in procession to St. Paul's cathedral. Mustering in Cheapside, the procession moved toward the cathedral, the clergy chanting the "Our Father" as they passed along the street still called Paternoster row, reaching the "Amen" as they turned the corner known for years as Amen corner.—Ave Maria.

Red Cross Ball Blue will wash double as many clothes as any other blue. Don't put your money into any other.

Damage by Lightning in Cities.

Investigations made over Europe seem to justify the belief that the damage by lightning, in the cities particularly, has decreased to a very marked degree in recent years, and it is explained by the presence of electric wires, which act as a protection in diverting the electric bolts. As the wires are put underground, it is expected that there will be noticed a great increase in the amount of damage by lightning and a return will be generally made to the use of lightning rods.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Chinese Barbers in Hard Luck.

Barber shops were the exception, rather than the rule, in China in the old days, itinerant barbers attending to their customers' wants in the streets or in the customers' home. There appears to be no tendency toward the institution of barber shops since the change of hairdressing; in fact, the tendency locally is to do away with the barber altogether. Thus many families are purchasing hairclippers, which seem to be regarded as the only essential to haircutting.

Red Cross Ball Blue, all blue, best bluing value in the whole world, makes the laundress smile.

What Could He Mean?

A young woman went to a grocery store and asked the polite clerk if he had some good cheese. "Yes, indeed," he replied, "I have some lovely cheese." "It is not correct to call cheese 'lovely,'" she said. "How is that?" he inquired. "Because 'lovely' should be used to qualify only something that is alive." "Well," retorted the clerk, "I'll stick to 'lovely.'"

Way of the Truly Great.

It is easy in this world to live after the world's opinion; it is easy in solitude to live after one's own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.—Emerson.

Discovery of Carborundum.

Carborundum first was produced by a chemist who, while experimenting with electricity, happened to place carbon electrodes connected with a dynamo into a bowl containing some crushed coke and clay.

NERVOUS DESPONDENT WOMEN

Find Relief in Lydia E. Pinkham's Vegetable Compound —Their Own Statements So Testify.

Platea, Pa.—"When I wrote to you first I was troubled with female weakness and backache, and was so nervous that I would cry at the least noise, it would startle me so. I began to take Lydia E. Pinkham's remedies, and I don't have any more crying spells. I sleep sound and my nervousness is better. I will recommend your medicines to all suffering women."—Mrs. MARY HALSTEAD, Platea, Pa., Box 98.

Here is the report of another genuine case, which still further shows that Lydia E. Pinkham's Vegetable Compound may be relied upon.

Walcott, N. Dakota.—"I had inflammation which caused pain in my side, and my back ached all the time. I was so blue that I felt like crying if any one even spoke to me. I took Lydia E. Pinkham's Vegetable Compound, and I began to gain right away. I continued its use and now I am a well woman."—Mrs. AMELIA DAHL, Walcott, N. Dakota.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.
