# ive from 8t. Paul to the coast. The CITY COUNCIL TRANSACTS MUCH IMPORTANT BUSINESS

Notwithstanding the high temperature last evening, the city council needsy night.

Wrestled with municipal questions until after midnight. There was the usual rentine work of auditing claims the attention of the council and police against the city, the reading of the officers that it was the intention of officers monthly reports considering the attention of what is known as the tempt to blow up a tenement house in street grades, an oadinance for lower Brooklyn. Four leaped from which was presented and read the

gambling fraternity to again open up gambling games' and that it had come to his knowledge that gambling is now being carried on both day and night. He informed them of their duty and if the ordinances were not enforced and knowledge of such nonenforcement was brought to the mayor sharges would be brought against the

police officers. The mayor also called attention to what seemed to be irregularities with reference to the water system, that is in regard to the manner of making tape whereby more than one house could be supplied and other minor matters shigh resulted in a round table talk by all the councilmen and which poss ibly will result in a new ordinance being passed in the near future.

The question of dumping garbage in the western portion of the city was also mentioned by the mayor.

The subject for discussion that the itizens of La Grande will be delighted to know is receiving careful consid eration by the council is that of secur-ing an additional water supply, and with this view the water committee was instructed to make an investigation of the various springs in the southern portion of the city and were instructed to expend, if they thought necessary, \$200 in opening up such springs as they thought proper. It was shown that several springs had teen measured by the water superintendent which are now flowing 94,000 gallons every twenty four hours and it was thought these spring if developed might exceed this flow. Other large springs were mentioned and it is now the purpose of the council to investigate all of the springs and ascertain if there is sufficient to supply the city and furnish a purer supply than is now possible under present conditions. The result of these investigations will be a walted with interest as not only under present conditions is our supply limited, but the question of a sewer eye-tem will soon have to be met and this will require more water.
