THE EYE IMPORTANT

The eyes is one of the most important and delicate parts of the body. "Sight is Priceless." Glasses should not be worn where no error of refraction exists, but where an error does exist they should be put on as soon as possible and worn constantly until the defect is cured. Wearing glasses once does not signify that they will always be worn. You can at any time (before the defect is cured) go back to the poorer vision if you so desire. The vision will not be poorer than it was before the glasses were worn, but will be more noticeable on account of having been accustomed to better vision. I have made a special study of the eyes and have been fitting glasses for fourteen years. Ask anyone who I have fitted for glasses as to ability, they give me credit and are convinced. All work guaranteed.
