YOU'LL BE STRUCK WITH AMAZEMENT
 If you could see how some factory made clothing is put together. The skimping of materials, the inferior interlinings. But none of these things occur in a suit of our tailoring. That's why one suit of ours will outlast two of the factory made. Order one and the wear will prove it.

New Orleans Invention.
 London, July 13.—At the Bourne-mouth aviation meet tomorrow T. R. Phillips, the Liverpool inventor-engineer, will attempt a demonstration in connection with an aeroplane of his new invention for controlling and directing aerostats by ethically transmitted electricity.
 Phillips recently gave a demonstration with a 20-foot Zepplin airship and showed his ability to raise, lower, drive, stop and turn it at will by the manipulation of the keyboard of a transmitter. Phillips claims the principle is applicable to man-carrying airships and aeroplanes, but primarily is intended for aerial torpedoes.
 "I can sit in an arm chair in London," he says, "and make an airship drop a bunch of flowers in a friend's garden in Manchester, Paris or Berlin, and with equal ease I can make it drop explosives wherever I like. I believe it will revolutionize the existing methods of warfare. I have offered the invention to the British government, which will inspect it soon."
 A test that was carried out recently shows it is possible to diagnose heart troubles by telephone a distance of 100 miles. The experiment was conducted between Mr. Milne's house, on the Isle of Wight, where the seismologist and four physicians, using an ordinary telephone, listened interestedly to the beating of a woman's heart in London.
 A stethoscope held over her heart in the familiar manner was attached to a telephone recently invented by Sydney Brown by means of which sounds are magnified.
