## GLASSES

Were invented a great many years ago—so were eyes. The eyes in construction are the same today, but the glasses have changed. The science of optics has steadily advanced, until now we are able to find glasses to correct all defects of vision, and these defects are many and of varied forms. Few persons, comparatively speaking, have perfect eyes; an eye which is not perfect is an annoyance to the brain; the eye and brain are very intimately connected. When the eyes differ we have unequal vision—unequal vision causes headaches and nervousness; these are symptoms of eye-strain. I correct unequal vision with lenses scientifically made. Optical lenses are made from scientifically made glass, except in cheap spectacles; in these the glass is made the same as for the windows. I use pure and faultless crystals only.

All broken lenses replaced while you wait. Charges are reasonable.
