

COAL FIGURES SHOW INCREASE

PENNSYLVANIA'S MINE ACCIDENTS INCREASING.

Total Output Largest, Except Once, in Many Years of Industry.

Washington, Aug. 30.—(Special)—Except that of the "boom" year, 1907, the production of anthracite in Pennsylvania in 1910 was the largest in this history of the industry, according to E. W. Parker, coal statistician of the United States geological survey. The quantity produced in 1910 was 75,433,346 long tons, an increase over 1909 of 3,058,997 long tons, the value increasing from \$149,415,487 in 1909 to \$160,275,302 in 1910. The production in 1910 was within almost exactly 1,000,000 long tons of the maximum record for 1907, when the output amounted to 76,432,421 long tons. The value of the product in 1907 exceeded that of 1910 by \$3,207,754. The average price per ton at the mines in 1910 was \$2.12, against \$2.06 in 1909, \$2.13 in 1908, and \$2.14 in 1907.

Practical Coal Conservation.

Through the recent invention, says Mr. Parker, of grates and furnaces adapted to the use of small sizes of anthracite, and owing to the higher prices of the prepared sizes, the percentage of waste has been reduced to a minimum. "Buckwheat," "rice," "barley," and even culm are now important steam-raising fuels, particularly in hotels, apartment houses, and large office buildings in the cities of the east, where smoke-inhibiting ordinances are in force. An object lesson in practical conservation is here furnished and to the credit of the operators in the anthracite region he said that it was put into effect a number of years before the agitation over the conservation of natural resources began. Not only are the small sizes produced in the present mining operations sold and utilized, but the unsightly culm banks which blotted the landscape in the anthracite region are fast disappearing as the usable coal is being recovered from them by washeries.

Of the total production in 1910, 4,184,629 tons were recovered from the old culm banks, and 91,833 tons were recovered by dredges from the bed of Susquehanna river.

The anthracite producing industry was without any marked features during the year. The operators and miners had in 1909 renewed by mutual agreement for a third term of three years the awards of the Anthracite Commission, consisting of six members, three representing the operators and three representing the miners, has done exemplary service in bringing the employers and employees into harmonious relations and has demonstrated the wisdom and practicability of conciliatory methods of settling labor disputes.

Utilizing the Consumers' Cellars. The policy adopted several years ago by the operators of allowing discounts from the circular prices for coal purchased in the spring and early summer months, continues to work satisfactorily. The discounts allowed on domestic sizes are 50 cents a ton in April, 40 cents a ton in May, 30 cents in June, 20 cents in July, and 10 cents in August, the circular prices being restored in September. The inducements thus offered to make the cellars of consumers the storage places for the winter supplies of fuel has had a notably steady influence on the trade and gives steady employment to the miners throughout the year, against the conditions of rush work in winter and much idleness in summer prevailing before the rule was put into effect.

Fatalities in the Mines. According to a statement made to the United States bureau of mines by James E. Roderick, chief of the department of mines of Pennsylvania, there were 601 fatal and 1,050 non-fatal accidents in the anthracite mines in 1910. This was an increase of 34 in the number of fatal accidents and of 15 in the number of men injured as compared with 1909, when 567 men were killed and 1,035 injured. As the production in 1910 amounted to 75,433,346 long tons, the quantity of coal mined for each life lost was 125,513 long tons against 126,644 long tons in 1909. The death rate per thousand employees in 1910 was 3.55, against 3.31 in 1909.

Washington, Aug. 30.—(Special)—California's production of coal in 1910 was 11,164 short tons, with a spot value of \$18,336, according to E. W. Parker, of the United States geological survey.

In 1909 California showed the largest percentage of increase among the coal producing states. In 1910 it showed the largest percentage of decrease. Both changes were due to fluctuations in the operations of the Stone Canyon Consolidated Coal company, in Monterey county. For two years preceding 1909 this company had expended large amounts of money in developing its property and in building a 25 mile railroad to connect its mine

with the Southern Pacific railroad. Unfortunately unforeseen difficulties were encountered and one misfortune followed another until the resources of the company were exhausted and as it was unable to procure additional capital a receiver was appointed and work was suspended in October, 1909. In the nine months from January to September of that year the Stone Canyon mines had produced 75 per cent of the state's output for the entire year. No coal was produced at this mine in 1910 and the production for the state decreased about 75 per cent.

All of the coal produced in 1910 came from Amador and Riverside counties, principally from the Ione mine in Amador county. This coal is lignite. The Stone Canyon coal is a noncaking bituminous coal of good quality and should make an excellent domestic fuel. It stands exposure well and with favorable freight rates it would compete successfully with foreign coals in the markets of San Francisco and other cities of the state.

Oil Used in Place of Coal.

The small production of coal in California is offset by the enormous increase in the production of petroleum, most of which is used for fuel. The oil produced in California in 1910 aggregated between 65,000,000 and 70,000,000 barrels, which, on the basis of 3½ barrels of oil for each ton of high grade coal, would be equal to a production of nearly 20,000,000 tons of coal.

The use of petroleum by the transportation and manufacturing industries of California has practically eliminated coal as a steam-raising fuel in the state. Oil is also used in the manufacture of gas which is employed for cooking and for heating residences as well as for lighting. Oil is now also coming into use as a direct fuel for household purposes.

Finally, Mount McKinley and Mount Foraker, which in clear weather had been visible for most of the time, loomed large and majestic and on August 4 camp was made only 14 miles in an air line from the summit of Mount McKinley. "Here," says Mr. Brooks, "a day's delay permitted the writer to climb a spur of the mountain to snow line and to obtain some clue to its geologic structure; but satisfaction at standing on its slope nine miles from the summit, which had never before been approached by white men, could not but be tinged with regret that there was neither time nor means for reaching a higher altitude."

The position of Mount McKinley was actually determined, as also its altitude, 29,300 feet. Mount Foraker, some 15 miles to the south of Mount McKinley, was also located, and its altitude of 17,000 feet determined. These observations were made from a number of other peaks varying in height from 8,000 to 11,000 feet. The actual surveys of the trip covered about 6,000 square miles, but the information obtained and the correlation established between previous surveys threw additional light on the geography and topography of about 20,000 square miles. A large amount of geologic work was also accomplished, which is described by Mr. Brooks and Mr. Prindle, of the party, in the report.

First Humans Seen for Three Months. As they pressed inland from Mount McKinley, Mr. Brooks states, August 24 was marked by an encounter with a white man and a band of Indians, "the first human beings we had seen in nearly three months," and a few days later the party emerged from the forest on the south bank of the Tanana at the small native settlement of Tortella, or Nenana. "To the natives the arrival of white men from the mountains seemed little short of miraculous." The great hazards of the trip had now been overcome, yet the record states that in covering an ensuing 30 miles the difficulties of travel occupied the energies of the entire party for eight days, as streams had to be bridged, forded, and rafted, and even corduroy trails built. Within six days five different bridges were constructed and six rivers were rafted. On the 15th of September the party reached Rampart and the next morning boarded a river steamer bound for St. Michael.

EADEN GRAVE ADORNED. Handsome Monument Erected Over Remains of Pioneer Family. Through the thoughtful kindness of some old-time friends, a handsome monument has been erected at the graves of Rev. and Mrs. Abraham Eaden and his brother Solomon's. E. C. Davis of this city supplied the stone.

For summer diarrhoea in children always give Chamberlain's Colic, Cholera and Diarrhoea Remedy and castor oil, and a speedy cure is certain. For sale by all dealers.

RELIEF UNION WILL CONVE

IMPORTANT YEARLY SESSION HERE TOMORROW.

L. D. S. Stake Officers of Relief Society to Convene Here.

The yearly conference of the Union Stake Relief society will convene at the L. D. S. tabernacle, tomorrow, Aug. 31st, at 10 o'clock a. m. and 2 o'clock p. m., to which all are cordially invited.

There will be in attendance at this conference Mrs. Emmaline B. Wells, the general president of the Relief society in all the world, and also Rebecca Nibley and perhaps other members of the general board and a special treat is anticipated.

All officers and members of this society, together with the presidency of the stake, bishops of wards and all auxiliary officers are expected to be in attendance at these sessions. This society has accomplished much in the way of storing grain and relieving distress and in many other ways has been a power for good. This section is particularly favored in receiving a visit from the renowned president, and it is hoped none will miss the opportunity of hearing her speak as she is a woman of exceptional ability and highly esteemed by all who know her.

Murdered Boy Unmourned.

Alone and without friends in a strange country the boy who fell while in the bright promise of youth went to his last resting place yesterday, re-

lates the Baker Herald. Baker county buried John Thomas, yesterday, and the murdered youth, of whom his father had washed his hands, was taken to the cemetery, unaccompanied and unmourned.

The funeral occurred late in the afternoon. The service was read over the body by Rev. J. Neilson Barry, rector of St. Stephens, and the quiet mortuary chapel was deserted except for one woman who had entered the Welch parlors to purchase a picture and was induced to remain.

Then the body of the 26-year-old boy who met his death at the hands of George Setser in the Diamond saloon a week ago was taken, in its plain cheap coffin to Mt. Hope cemetery and deposited in a soon-forgotten grave.

To Select Cap Defenders.

New York, Aug. 30.—Nine speedy motor boats cut the waters of Huntington bay today in the first of the trial races to select three boats to defend the British international trophy. The elimination contests will continue three days and are to be conducted over the same course in which the races between the American defenders and the British challengers will take place next week. The nine boats entered in the elimination trials range in length from 20 to 39 feet and with one exception all are entered from the Motor Boat club of America.

Fights Scheduled for Tonight.

Matty Baldwin vs. Willie Ritchie, 20 rounds, at San Francisco. Tommy Gary vs. Grover Hayes, 10 rounds, at Cleveland, O.

Sprains; get the careful treatment. Keep quiet and apply Chamberlain's Liniment freely. It will remove the soreness and quickly restore the parts to a healthy condition. For sale by all dealers.

STATEMENT.

his deposit, principal or interest, for a of the La Grande National Bank of La Grande, county of Union, state of Ore—immediately prior to said date, with gon, showing the amount standing to the name, last known place of residence of every depositor July 1, 1911, and the fact of his death, if who has not withdrawn any part of known.

and the amount to the credit of each depositor as required by the provisions of Chapter 148, of the general laws of Oregon, 1907.

(Seal) F. L. MEYERS,

Subscribed and sworn to before me this 8th day of July, A. D. 1911.

H. A. ZURBRICK,

Notary Public for Oregon.

State of Oregon, County of Union, ss. I, F. L. Meyers, being first duly sworn, depose and say upon oath, that I am the cashier of the La Grande National Bank, of La Grande, County of Union, State of Oregon; that the foregoing statement is a full, true, correct and complete statement, showing the name, last known residence or postoffice address, fact of death, if known,

and the amount to the credit of each depositor as required by the provisions of Chapter 148, of the general laws of Oregon, 1907.

(Seal) F. L. MEYERS,

Subscribed and sworn to before me this 8th day of July, A. D. 1911.

H. A. ZURBRICK,

Notary Public for Oregon.
