Turkeys, live weight, 17 to 18c.
Ducks, live weight, 12 1/2c.
Geese, live weight 12 1/2c.

PICTURES PLEASE AUDIENCE.

1911 Frontier Pictures, Seen to Good Advantage by Local People.

The 1911 Cheyenne frontier day celebration pictures being shown at the Steward opera house were seen and well received by a large audience last night for the first time in La Grande. A good many present recognized Buffalo Vernon and Dell Blanchett, both of whom were seen at the Pendleton Roundup. The films consist of three reels of 1,000 feet each or 3,000 feet of the best western films ever made. Bucking horses and buffalo and the only team of buffalo ever broke to harness are some of the features of the film. Among the audience last evening were several prominent business men of this city who were very earnest in their praise of the pictures both for photography and clearness. These pictures will be shown again tonight and tomorrow afternoon and evening at the Steward opera house.

Love Letters of a Husband.
"Dear Jane—Arrived here with morning O.K. It's a poor looking town, but business is good. I'll write more next time.—Your loving husband, John"
"Dear Jane—Got here last night. Train was three hours late. No news, but business is good. Longer letter next time.—Yours as ever, John"
"Dear Jane—Sorry to hear you weren't feeling well. Hope you are better by now. Getting a good many orders here. No news, but more next time.—Lovingly, John"
"Dear Jane—Just to let you know I'm all right, though the rheumatism has been bothering me again. Got here this morning and have done a lot of business already. Nothing to write, but I'll do better next time.—With love John"—London Mail.

Quicksand.
Quicksand differs from beach and other sand in that the individual grains have become worn by water or wind until the normal facets and angles have been abraded and each grain has become more or less spherical. The coefficient of friction is thus reduced to the minimum and the bed does not pack when dry and when wet behaves like a fluid. The depth of quicksand is conditioned by the depth of the hardpan or other compact material upon which the sand rests. In building operations on the lower end of Manhattan Island quicksands are encountered more than 100 feet in depth. Near Pueblo, Colo., in 1875, a train was drawn by a derailed locomotive into a quicksand and was swallowed up beyond discovery, although probed for to a depth of fifty feet. In certain smaller littoral quicksands, bodies which have been engulfed are in time brought to the surface at the edge of the silencing sands. This is due to the structure of the containing bowl of rock which permits a sluggish circulatory movement of the plastic mass.

Had Enough of Law.
A gentleman who is now general superintendent of a railroad began life by trying to practice law in a Missouri village. One of his first cases was before his father, who was a justice of the peace. After a stormy wrangle between the young attorney and his adversary the old gentleman decided the case against his son's client. The young man gave vent to some expressions of indignation, gathered up his books and started to leave the room. His father pushed his specs on to his forehead and began mildly to lecture him, saying:

"Young man, do you expect to make your living practicing law?"
The son, who had by this time reached the door, shouted back as he retired from the field:

"Not before such a blamed fool court as this!"
He abandoned the law and engaged in railroading with great success.—Green Bag.

Real Angel of Death.
Most of us are familiar with the beautiful and artistic conception of French wherein a young sculptor who is plying his magic chisel upon a block of stone and summoning from the snowy depths of the marble the dream face of his soul's ideal is gently touched by the wistful eyed angel of death and the skillful arm forever stayed. The whole creation is marvelously beautiful, and the world is better for its birth. Nevertheless it is allegorical and misleading. The real angel of death in the case of the thin faced sculptor was not a sad visaged maiden of classical profile. In all probability it was a minute, rodlike organism floating amid motes of dust and known to scientists as the "bacillus tuberculosis." The writer does not want to be a shatterer of ideals, but the sooner such poetic notions of death are done away with and the mass of the people educated in a common sense way to the dangers of dust and bacteria the better it will be for humanity in general.—J. G. Ogden in Popular Mechan.

Durability of Steel.
It has been shown that nearly all the failures of steel occur very early in its history. If a plate or bar of mild steel lasts for a year in service it may be trusted to last for many years. The most injurious thing is continual bending backward and forward, as in what is called the "panting" of a boiler end. As one authority puts it, steel has a somewhat "tumultuous youth," but "in middle age it is trustworthy and in old age beyond reproach." In regard to corrosion there is difference of opinion, some holding that steel corrodes more readily than iron.

an Artist's Trials.
Brownie, father certainly has his own troubles.
Pinder—Why, I thought he was doing splendidly.
Brownie—He was until he painted that last landscape. He painted the sun in too natural.
Pinder—How could that be?
Brownie—Well, it dries up the water in the pond so fast that he has to paint in new water every two or three days.—New York Times.

In Plain Words.
Father (to his daughter, whom he sees whispering to her mother)—Elsie, how often have I told you not to do that? Speak out if you want anything.
Elsie—Well, father, I wanted to know why the woman near me has such a red nose.—Fliegende Blätter.

This May Happen to You Next.

Nearly every day we read of some fire or accident caused by a kerosene lamp. They are especially dangerous, especially where there are children in the home.

OIL LAMP EXPLODES; BUILDING DESTROYED

A kerosene lamp which A. Burgoyne of 6042 Millard avenue, has been in the habit of leaving lighted each night in the dining room of his home, exploded at 1 o'clock this morning. The flames spread throughout the house, completely destroying the building. The family managed to escape with their clothing but it was impossible to save any furniture. A neighbor who heard the explosion saw the flames spreading and warned the people in the house of the impending danger.—Portland Journal, Nov. 1.
