

IT IS EASY TO SELECT a Becoming Hat Here

Every good shape of the season awaits your inspection

The woman who has been debating with herself where she can find the most becoming hat will save time and much worry by coming straight to our millinery department.

Here have been gathered a collection of models which are in thorough accord with the prevailing fashions of the season. There are numerous wide shapes and the smaller models. Felt, plush, silk and beaver hats are here in plenty. As you know, trimming are very simple—though very effective.

Why Not?

Get the benefit of best selections while broad displays make selections so easy?

Prices, too, will please you—our millinery values are widely known.

BOILING GEYSERS.

What Causes the Spouting of These Natural Steam Engines.

Geysers are found in only three places in the world, according to a publication entitled "Geysers" issued by the department of the interior. These three regions are Iceland, where geysers were first discovered; New Zealand and the Yellowstone National park, in which these natural steam engines are more numerous and of greater beauty than in the two other areas mentioned. In the Yellowstone the geysers are found in detached geyser basins, or fire holes, as they were called by the first explorers, and the groups possess individual peculiarities which give character and interest to each locality. The most noted of these basins is, however, that known as the Upper Geyser basin of the Firehole river, one of the headwaters of the great Missouri. The whole floor of the valley is fairly riddled with springs of boiling water, whose exquisite beauty is indescribable. Light clouds of fleecy vapor curl upward from waters of the purest azure or the clearest emerald and, encircling rims of white marblelike silica, form fit setting for such great gems. A large part of the valley floor is covered with the white deposit of silica known as siliceous sinter, deposited by the overflowing hot waters. The weird whiteness of these areas, the gaunt white trunks of pine trees filled by the hot waters, the myriad pools of steaming crystal and the white clouds floating off from the chimneylike geyser cones form a scene never to be forgotten by those fortunate enough to behold it.

The intermittent spouting of geysers was long a riddle to scientific men. The theory, which bears the name of the illustrious chemist, Bunsen, is now generally accepted. This theory is based on the well known fact that the boiling point of water rises with the pressure and is therefore higher at the bottom of a tube of water than at the surface. In a long and narrow or an irregular tube ebullition in the lower part is only possible at a much higher temperature than at the top owing to the weight of water column above it. If by the continued heating the lower layer of water attains the temperature at which it can boil steam is formed, whose expansive force lifts the superincumbent column of water, causing a slight overflow at the top, which shortens the column, so that steam is formed at a higher point and a further lifting and relief of pressure ensues, followed by an eruption.

They Shoot, but Never Steal.

Montenegrins pride themselves on the possession of two great virtues—patriotism and honesty. Their love of country has been demonstrated in their history, and their honesty is witnessed to by their laws. One remarkable law of the Black Mountain Kingdom di-

rects that any man finding a purse or jewelry upon the road shall place the same upon the nearest stone, so that the loser will have only to retrace his steps to recover his property. That law is never violated. A Montenegrin thinks nothing of shooting a man with whom he disagrees, but would shrink in horror from the idea of stealing the veriest trifle. Montenegrin law is more severe upon the thief than the homelands.

FUNNY FRILLED LIZARD.

Carries an Umbrella, Has a Whip Tail and Walks Like a Bird.

The frilled lizard is found in Australian woods, being tolerably abundant in north Queensland and the Kimberley district of Western Australia. It lives on beetles such as are found on the tree barks. It is about three feet long, measured from head to tail point. What makes it remarkable consists of two things—its hurried walk and its fighting anger.

It carries a sort of natural umbrella top about its neck, which it elevates suddenly with an alarming effect even to ordinary lizard killing dogs, scaring them as an umbrella opened in the face of a charging bull; hence it is called the frilled lizard. Its teeth are not of much use as a defense against a vigorous animal, but when it fights it uses its long, lithe tail in a way to bring long bruises on one's hands—in fact, could it be properly trained, it might serve as an automatic switch, which, like the magic rub-a-dub-dub stick, would at the word administer a thrashing to the disobedient child.

From the scientific point of view the creature's peculiar method of ambulation is most interesting, because it presents an absurdly grotesque appearance at such times, more especially from the rear. It walks bipedally or on two feet, like a bird, and so much does it resemble a bird in its walk that it seems to be the connecting link between the ancestors of birds and the lizards of today.

A Real Disciplinarian.

The other night we heard a father speak thusly: "William, your mother tells me that you must have a dose of castor oil before retiring tonight. It is your bedtime now. Take your medicine and go to bed at once." "But, papa, I don't wanta take no castor oil." "You must take it, and immediately." "Aw, papa, I don't wanta!" "William, if you don't take that medicine I'll put you right to bed this minute without giving you a drop of it." William was so scared that he took it. That's the way to enforce discipline.—Cleveland Plain Dealer.

MANY HEARD ARCHDEACON

DIVINE'S FIRST ADDRESS GIVEN LAST NIGHT.

Upton H. Gibbs Commences His Ninth Year in Local Church Field.

Archdeacon Webber more than came up to the expectations of his hearers in his first address last night of a week's mission. His general text was: "I am the Bright and Morning Star" and showed how this applied to Jesus Christ who is the bright and morning star to the world. He quoted Emerson's well known line "Hitch your wagon to a star." In the course of his sermon he spoke on the attitude toward pleasure and brought out the principles which should govern our conduct towards it. Tomorrow evening he will give an instruction on the five fundamentals of the Christian religion to be followed by a sermon on the five great things which Jesus Christ as the Bright and Morning Star has shined forth into the world.

Dr. Webber-Thompson at the four o'clock service captivated the children's audience as he told them about four foxes and also of the "Father of his country."

The early communion service will be at 7:30 instead of 8 as this earlier hour proves more convenient.

As the rector, the Reverend Upton H. Gibbs today began the ninth year of his ministry in St. Peter's parish the event was suitably commemorated at the Communion service.

Labor Questions Bother.

Rochester, N. Y., Nov. 12.—Unionization of the Los Angeles Steel trust a continuation of the struggle to unionize the metal trades and the Pacific coast I. W. W. problem were before the annual convention of the Federation of Labor today.

The western delegates say that skilled steel workers discourage unions unsatisfied from joining the I. W. W. This is expected to develop a serious conflict between the industrialists and the federation. The forenoon session was devoted to reports of committees.

The report that the executive committee attacked "the policy of misrepresentation of the I. W. W. in its attitude toward the federation is denied. The industrialists charge that the federation is "unyielding, autocratic and not keeping up with the development of labor." It is denied that the federation opposes unionism. The report traced the conditions, and accomplishment of labor during the year. It urged the establishment of a national department of labor pas-

HALL OUTLINES MAYOR'S RACE

BECOMES CANDIDATE FOR MAYOR OF CITY.

Announces Various Propositions That He Will Seek to Enact.

With planks touching a prospective gas plant, lower water rates, demanding that people be given an opportunity to vote on the commission plan of government, reduce the number of saloons and regulate them, have detailed statement of receipts and disbursements of the city paid monthly, and careful consideration of the taxpayers' sentiments on street improvement, Dr. M. K. Hall announces today a platform on which he has decided to run for mayor at the municipal election in December. His petition was circulated some time ago but his acceptance has not been forthcoming until yesterday afternoon. His statement was:

"I am particularly anxious to secure for the city a gas plant without cost to the city that will reduce high rates and afford cheap fuel in the summer months. Baker and Pendleton have had gas plants for years, and how to obtain a gas plant, I believe I know.

"I believe the rates for water should be readjusted so as to retire the bonds, provide for the sinking fund, meet interest and provide for proper maintenance but not bring any additional revenue to the city.

"I believe the people should be given an opportunity to vote on the commission form of government at once.

"The liquor trade should be regulated and the sale of liquor confined to those paying licenses. The number of saloons should be reduced to eight where it was originally placed at and promised the people.

"I want to provide for monthly publication of a statement of receipts and disbursements by the city.

"A careful consideration of the wants of the property owners should be exercised whenever improvements are proposed. These several subjects will be my special purpose in seeking the office of mayor and to carry them out my purpose if elected."

THREE KIDS—WHICH WOULD YOU RATHER BE?

HUGHIE GOLDEN,

Mascot of the 1912 Princeton eleven (He sees all the games and knows the players.)

CROWN PRINCE OF ITALY.

Already he is learning to be a soldier. He has uniforms, swords and guns.

A Night of Terror.

Few nights are more terrible than that of a mother looking on her child choking and gasping for breath during an attack of croup, and nothing in the house to relieve it. Many mothers have passed night of terror in this situation. A little forethought will enable you to avoid all this. Chamberlain's Cough Remedy is a certain cure for croup and has never been known to fail. Keep it at hand. For sale by all dealers.
