

Buy a whole box of our
fine cigars for
Thanksgiving

What would be the use for us to sell you a peer cigar? It would only finish in your buying your cigars from someone else. We want you to buy your cigars from us—all of them—so we give you a cigar that we know you will come for again. Buy a whole box. Don't be short on the "smokes" when your friends come in.

Come to OUR Drug Store,

NEWLIN DRUG CO.

HORN OF PLENTY RUNNING OVER

CAULIFLOWER ALONE SCARCE
LOCALLY TODAY

No Change in Prices of Moment, and
Wholesalers Well Stocked

With little change in prices, and a big line of fancy and varied goods in the wholesale houses to select from, Thanksgiving week opened in La Grande markets this morning with the horn of plenty tooting loudly. Cauliflower is the only commodity that will be short and it is not likely that there will be any whatever. With this exception, there is a fine line of stuff to choose from—provided one chooses early. The best dinners Thursday will be those provided for early.

Market quotations today are:

FRUIT.

Oranges—50¢ @ 60¢ dozen.
Grape fruit—20¢ @ 35¢.
Cranberries—15¢ per qt.
Grapes, Tokay—20¢ @ 25¢.

boiled ham sliced 40¢; smoked choul-

der 15¢; lard 15¢; liver 6¢ to 8¢; tongue

15¢; hearts 8¢; salmon 20¢; halibut

18¢; smelt 10¢.

THE HUMAN BRAIN

Its Crumpled Up Shape Is One of
Nature's Clever Devices.

CELLS OF THE GRAY MATTER.

Their Mass and Not the Size Nor
Weight of the Brain Marks the Men-
tality of the Individual—Develop-
ment of the Brain of an Infant.

The apparent crumpling up of the brain is one of the most remarkable of nature's devices for securing the greatest possible amount of surface in the given space. If you take a page of a newspaper and hold it by the edges, blowing it up to form a balloon, you have the surface of the paper occupying the largest possible amount of space. If you crumple up the paper you can get the same amount of surface by following all the creases in one-fourth to one-tenth of the space. This is precisely what nature has done. In the rabbit, for instance, the cerebrum, or great brain, with which most of the thinking is done, is without a crease, perfectly round and smooth, and the rabbit is about the stupidest of animals.

If you study the brains of animals a little higher in intelligence than the rabbit you will find that creases come into the brain until in man the entire brain is a series of creases and convolutions that puzzle you by their intricacy. It is plain that the actual surface of this creased brain of man is many times greater than if it were all smooth, like the rabbit's, and this is the way in which evolution has provided for giving the brain of man a surface from four to ten times what it would have been if smooth, so as to give space for as much gray matter as possible.

No scientist has yet explained the reason, but the fact is admitted that thought and gray matter are in proportion. The cells of the gray matter seem to store up thought and give it out when called upon to do so. This has been proved by electrically stimulating the gray matter when exposed by an accident or operation and noting the result in the thoughts expressed by the patient. This gray matter is spread in a coat of varying thickness all over the surface of the brain, while the white matter and nerves lie under it and ramify into it.

A man may be said to be intellectual in proportion to the amount of gray matter which he has in his brain. This varies in individuals, one having more gray matter at one spot, another a thicker layer at another, much of this being doubtless due to cultivation, though the laws of the multiplication of gray matter are still secrets which science has not pierced.

Nor can intellectuality be measured by the weight of the brain. The average male brain weighs forty-eight ounces, and the average female brain forty-three and a half, but this does not mean that woman is necessarily man's inferior intellectually. Her brain may have more gray matter in proportion or thicker layers at the parts most in demand by her life. Brains weighing more than sixty ounces have been found in idiots, and some of the most brilliant men and women have had very small brains when put upon the scale. But in all cases of great intellectuality the depth of the convolutions at certain places in the brain is enormous, and the five lobes into which each hemisphere of the brain is divided are very distinctly marked, affording space for much of the gray matter.

The infant has gray matter all over the surface of its brain, and thanks to the generations of development that have preceded it the divisions into lobes and the deep creases are already there. But they are still in a very soft form and development follows in accordance with the intellectual development of the child. Its natural endowment at birth is only an endowment of possibility, and the question of whether that infant will be an intellectual giant or a pigmy in brain power is dependent almost altogether upon the training which it receives and the development of the gray matter in its brain.

The genius cannot be explained and possibly never will be, but a partial explanation of his tremendous power in some one direction is offered by the examination of his brain after death. Only lately a very eminent surgeon of Philadelphia died and when his brain was examined it was found that for a large part it was like a child's, but in those parts especially required by his profession it was developed far more than is usual, and the layers of gray matter at these spots were inordinately thick. It is never right to draw any broad conclusion from a single instance, but science has generalized from many instances of this kind until it is ready now to say that thought power is proportionate to the gray matter in the centers most used or needed.—New York World.

John Bull the Musician.

Few but those who have studied musical history know that the name John Bull was borne by one of the most famous musicians of the sixteenth century. He was as famous a harpsichord player in his day as Liszt was a pianist, but as a composer he lacked the creative power of Liszt, the result being that Bull is practically unknown to the general public today, even in England.

CLASSIFIED ADS.

TYPEWRITING done at one-half regular rate. Address communication or manuscript to F. N. Whitman, La Grande, Ore. 11-13-13t

Despondency Due to Indigestion.

It is not at all surprising that persons who have indigestion become discouraged and despondent. Here are a few words of hope and cheer for them by Mrs. Blanche Bowers, Indiana, Pa.: "For years my digestion was so poor that I could only eat the lightest foods. I tried every thing that I heard of to get relief, but not until about a year ago when I saw Chamberlain's Tablets advertised and got a bottle of them, did I find the right treatment. I soon began to improve, and since taking a few bottles of them my digestion is fine." For sale by all dealers.

Attention School Teachers

The old Cafeteria stand will be open during the teachers' institute. A straight 40¢ meal will be served. Breakfast 7 to 9 a. m.; dinner 11.30 to 1.30 p. m.; supper 5 to 7.30 p. m. Will be open for business Monday morning. 11-20-5t

How About Your Home Water Supply?

IS IT PURE—PLENTIFUL—DEPENDABLE—ECONOMICAL?

Supply your home with all the pure, clear, sparkling water you need—direct from well or spring, by the Perry System. No water tank to collect slime, mud or rust. Compressed air delivers fresh water under the pressure and in quantities you need. Automatic—economical in operation, easily installed. Water left in well until you need it—then drawn fresh.

Call and Get Copy of the Perry Book

or let us send it to you. We want you to know all about the merits of this up-to-date system of water supply. The Perry System has many advantages than any other—is just what you need. It will give you water for drinking, kitchen, laundry, bath, barn, sprinkling and fire protection.

Cures Bodily Diseases With Root and Herb Treatment
Phone 762 Free Consultation La Grande Ore.
1412 Adams Ave.

The front-lacing principle (originated by The H. W. Gossard Co.) has accomplished much for the comfort and convenience of woman's dress. Of even greater importance than front-lacing, however, has been the genius displayed in the actual designing and making of Gossard Corsets.

So outstanding and thorough has been this work that, great as the front-lacing principle is, the Gossard method of design and manufacture transcends it, and the two combined occupy a position so commanding that they are now regarded as an international vogue.

Regardless of the cost—every Gossard Corset conforms to but one standard in style, workmanship and wearing service. A complete line of the new fall models and sizes always on hand. Prices \$2.50 to \$8.50.
